

SAFETY LIGHT CURTAIN

EN **INSTRUCTION SHEET**

Please read and understand this instruction sheet before storing, installing, programming, operating, maintaining, or disposing of the products. Please consult your OMRON representative if you have any questions or comments. Please refer to the User's Manual and the Quick Installation Manual for detailed instructions on usage.

(Version 2)

© OMRON Corporation 2006-2023 All Rights Reserved.

Instructions in the EU languages and a signed EU Declaration of Conformity are available on our website at www.industrial.omron.eu/safety.

LEGISLATION AND SAFETY STANDARDS

- 1. Application of a F3SJ sensor alone cannot receive type approval provided by Article 44-2 of the Labour Safety and Health Law of Japan. It is necessary to apply it in a system. Therefore, when using the F3SJ in Japan as a "safety system for pressing or shearing machines" prescribed in Article 42 of that law, the system must receive type approval.

 2. The F3SJ is electro-sensitive protective equipment (ESPE) in accordance with European Union (EU) Machinery Directive Index Annex V, Item 2.

 3. Declaration of Conformity
 OMRON declares that the F3SJ is in conformity with the requirements of following EUI Directives and UE Legislations:

- OMRON declares that the FSSI is in Conformity with the requirements of following EU Directives and UK Legislations:

 EU: Machinery Directive 2006/42/EC, EMC Directive 2014/30/EU, RoHS Directive 2011/65/EU,

 UK: 2008 No 1597 Machinery (Safety), 2016 No 1091 EMC, 2012 No 3032 RoHS

 4. F3SI is in conformity with the following standards:
- (1) European standards:
 EN61496-1 (Type 4 ESPE), EN61496-2 (Type 4 AOPD), EN61508-1 through -3 (SIL3), EN ISO 13849-1:2015 (Category 4, PL e)
 (2) International standards:
 IEC61496-1 (Type 4 ESPE), IEC61496-2 (Type 4 AOPD), IEC61508-1 through -3 (SIL3), ISO 13849-1:2015 (Category 4, PL e)
- through -3 (SIL3), ISO 13849-1:2015 (Category 4, PL e)
 (3) JIS standards
 JIS B 9704-1 (Type 4 ESPE), JIS B 9704-2 (Type 4 AOPD)
 (4) North American Standards:
 UL61496-1(Type 4ESPE), UL61496-2(Type 4AOPD), UL508, UL1998,
 CAN/CSA C22.2 No.14, CAN/CSA C22.2 No.0.8
- The F3SJ received the following approvals from the EU accredited body, TÜV SÜD Product Service GmbH:

- TÜV SÜD Product Service GmbH:

 •EC Type-Examination in accordance with the EU Machinery Directive, Type 4 ESPE (EN61496-1), Type 4 AOPD (EN61496-2)

 •TÜV SÜD Product Service Type 4 AOPD (EN61496-2)

 •TÜV SÜD Product Service Type 4 AOPD (EN61496-2)

 •TÜV SÜD Product Service Type 4 AOPD (EN61496-1), Type 4 AOPD (EN61496-1), Type 4 AOPD (EN61496-2), SIL1, 2, 3 (EN61508-1 through -3), EN ISO 13849-122015 (Category 4, PL-e)

 6. The F3SJ received the certificates of UL listing for US and Canadian safety standards from the Third Party Assessment Body UL.

 •Both are: Type 4 ESPE (UL61496-1), Type 4 AOPD (UL61496-2)

 7. The F3SJ is designed according to the standards listed below. To make sure that the final system complies with the following standards and regulations, you are asked to design and use it in accordance with all other related standards, laws, and regulations. If you have any questions, consult with specialized organizations such as the body responsible for prescribing and/or enforcing machinery safety regulations in the location where the equipment is to be used.

 •European Standards: EN415-4, EN692, EN693

 •U.S. Occupational Safety and Health Standards: OSHA 29 CFR 1910.212

Suitability for Use

Omron Companies shall not be responsible for conformity with any standards, codes or regulationswhich apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM

PRECAUTIONS ON SAFETY

Regarding the alert symbols and meanings used for the safe uses
In order for our customers to use the F3SJ in safety, precautions are indicated
in this manual with the alert symbols and statements such as the followings.
Those safety precautions relate to the important descriptions that must be
obeyed for the safe uses and operations. Be sure to obey the precautions. The
following indictions and symbols are used for the descriptions.

Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.

The F3SJ must be installed, configured, and incorporated into a control system by a sufficiently trained and qualified person. An une person may not be able to perform these operations properly, which may cause a person to go undetected, resulting in serious injury.

When changes are made to each function using the setting tool (F39-GWUM or F39-MC21), the administrator must manage the details of the changes and perform the changes. Accidental functional setting change may cause failure of human body detection, resulting in a serious injury.

If the device is to be reinstalled to a different facility or if the settings are not clear, reset to the factory default settings.

⚠ WARNING

Do not use this sensor for machines that cannot be stopped by electrical Do not use this sensor for machines that cannot be supped by electrical control. For example, do not use it for a pressing machine that uses full-rotation clutch. Otherwise, the machine may not stop before a person reaches the hazardous part, resulting in serious injury.

Do not use the auxiliary output or external indicator output for safety applications. Human body may not be detected when F3SJ fails, resulting in serious injury.

For Installation

Make sure to test the operation of the F3SJ after installation to verify that the F3SJ operates as intended. Make sure to stop the machine until the test is complete. Unintended function settings may cause a person to go update test expelling in sections injury.

undetected, resulting in serious injury.

Make sure to install the FSSI at the safe distance from the hazardous part of the equipment. Otherwise, the machine may not stop before a person reaches the hazardous part, resulting in serious injury.

Install a protective structure so that the hazardous part of a machine can only be reached by passing through the sensor's detection zone. Install the sensors so that part of the person is always present in the detection zone when working in a machine's hazardous area. If a person is able step into the hazardous area of a machine and remain behind the F3SJ's detection zone,

configure the system with an interlock function that prevents the machine from being restarted. Failure to do so may result in serious injury. Install the interlock reset switch in a location that provides a clear view of the entire hazardous area and where it cannot be activated from within the hazardous area.

The F3SJ cannot protect a person from an object flying from a hazardous area. Install protective cover(s) or fence(s).

To prevent personnel approach to dangerous part of the machine through an area disabled by the fixed blanking function, you must install a protective structure to cover the whole disabled area. Failure to do so may cause failure of human body detection, resulting in a serious injury.

You must ensure that a test rod is detected for all detection areas except where fixed blanking function is used. Failure to do so may cause failur of human body detection, resulting in a serious injury. Detection capability gets larger when fixed/floating blanking function is used. You must use the detection capability for fixed and floating blank functions. Failure to do so may cause failure of machine stop before reaching the machine's dangerous part, resulting in a serious injury.

You must ensure that the system works as you intended after configuring floating blanking. Failure to do so may result in serious injury. 0

arning zone output is non-safety output. You must not include it to culation of safety distance. Otherwise safety distance may be reduced, ulting in serious injury. A warning zone CANNOT be used for safety applications. Always install your system so that a detection zone should be passed before reaching a source of danger.

The muting and override functions disable the safety functions of the device. You must ensure safety using other method when these functions are operating. Install muting sensors so that they can distinguish between the object that is being

allowed to pass through the detection zone and a person. If the muting function is activated by the detection of a person, it may result in serious injury. Muting lamps (external indicators) that indicate the state of the muting and override functions must be installed where they are clearly visible to workers from all the operating positions.

workers from all the operating positions.

Muting related time must be properly configured for its application by a sufficiently trained and qualified person, and the person must have responsibility and the person must have responsibility. for settings, especially when setting the muting time limit to infinite Use independent 2 input devices for muting inputs You must install F3SJ, muting sensor, and physical barrier, and configure time settings for muting so that an operator should not enter hazardous zone.

A switch to activate the override function must be a hold-to-run device such as a spring return key switch and must be installed in a location that provide a clear view of the entire hazardous zone and where it cannot be activated from within the hazardous zone. Make sure that nobody is in the hazardous Install the sensor system so that it is not affected by the reflective surface of the F3SJ.

of the F3SJ. When using more than 1 set of F3SJ, install them so that mutual interference does not occur, such as by configuring series connections or using physical barriers between adjacent sets. Make sure that the F3SJ is securely mounted and its cables and connectors are properly connected. 0 Make sure that foreign material such as water, oil, or dust does not enter the F3SJ or the connector while the cap is removed.

0

Do not use the sensor system with mirrors in a retro-reflective configuration. Doing so may hinder detection. It is possible to use mirror to "bend" the detection zone to a 90-degree angle. Perform an inspection for all F3SJ as described in "Chapter 6 Checklists" of User's manual. When using series connections, perform inspections for

every connected F3SJ.

MARNING

Connect the load between the output and 24V line (NPN output). Connecting the load between the output and 0V line will result in a dangerous condition because operation is reversed to "ON when blocked".

Do not short-circuit the output line to the 0V line. Otherwise, the output is always ON. Also, the +24V of the power supply must be grounded so that output does not turn ON due to grounding of the output line.

Configure the system by using the optimal number of safety outputs that satisfy the requirements of the necessary safety category.

Do not connect each line of F3SJ to a DC power supply of more than 24VDC+20%. Also, do not connect to an AC power supply. Failure to do so may result in electric shock.

For the F3SJ to comply with IEC 61496-1 and UL 508, the DC power supply unit must satisfy all of the following conditions:

• Must be within the rated power voltage (24V DC ±20%)

• Must have tolerance against the total rated current of devices if it is connected to

multiple devices

• Must comply with EMC directives (industrial environment)

• Double or reinforced insulation must be applied between the primary and secondary

Double or reinforced insulation must be applied between the primary and secondary circuits

Automatic recovery of overcurrent protection characteristics (reversed L sagging)
Output holding time must be 20ms or longer
Must satisfy output characteristic requirements for class 2 circuit or limited voltage current circuit defined by UL508

Must comply with laws and regulations, regarding EMC and electrical equipment safety, of the country or region where the F3SJ is used (Ex: In EU, the power supply must comply with the EMC Directive and the Low Voltage Directive.)

Double or reinforced insulation from hazardous voltage must be applied to all input and output lines. Failure to do so may result in electric shock. Extension of the cable must be within a specified length. If it isn't, safety function may not work properly, resulting in danger.

To use the F3SJ in PSDI mode (Reinitiation of cyclic operation by the protective equipment), you must configure an appropriate circuit between tF3SJ and the machine. For details about PSDI, refer to OSHA1910.217, IEC61496-1, and other relevant standards and regulations.	the Q
Do not try to disassemble, repair, or modify this product. Doing so may cause the safety functions to stop working properly.	0
Do not use the F3SJ in environments where flammable or explosive gase are present. Doing so may result in explosion.	S O
Perform daily and 6-month inspections for the F3SJ. Otherwise, the syste may fail to work properly, resulting in serious injury.	m

PRECAUTIONS FOR SAFE USE

Make sure to observe the following precautions that are necessary for

ensuring safe use of the product.

• Thoroughly read this manual and understand the installation procedures, operation check procedures, and maintenance procedures before using the

Loads must satisfy both of the following conditions:

Not used with a current that is higher than the rating

Do not drop the product.
Dispose of the product in accordance with the relevant rules and regulations

of the country or area where the product is used.

PRECAUTIONS FOR CORRECT USE

Observe the precautions described below to prevent operation failure, malfunctions, or undesirable effects on product performance.

On not install the F3SJ in the following types of environments:

•Areas exposed to intense interference light, such as direct sunlight

•Areas with high humidity where condensation is likely to occur

e corrosive gases are present sed to vibration or shock levels higher than in the specification provisions

*Areas where the product may come into contact with water

*Areas where the product may come into contact with water

*Areas where the product may get wet with oil that can solve adhesive

Do not use radio equipment such as cellular phones, walkie-talkies, or transceivers near This is a class A product. In residential areas it may cause radio interference. in which case the Responsible Person may be required to take adequate measures to reduce

Intestall a cover to protect the F3SJ from spatter in an environment where foreign material such as spatter adheres.

such as spatter adheres.

Wiring and installation

Make sure to perform wiring while the power supply is OFF. Otherwise, the F3SJ may fail to operate due to the diagnosis function.

Do not short-circuit output lines to +24V line. Otherwise a fault of F3SJ may occur.

When extending the communication line with a cable (twisted-pair wire) other than the dedicated cable (F39-JDDD), use a cable with the same or superior specification. Connect the shield to the 0V line. Connect the shield to the 0V line.

•When replacing the cable connectors with other types of connectors, use connectors that provide a protection grade of IPS4 or higher.

•Properly perform the wiring after confirming the signal names of all the terminals.

•Do not operate the control system until 2 seconds or more (2.2 seconds or more in case of series connection) after turning ON the power of the F3SJ.

•Be sure to route the F3SJ cable separate from high-potential power lines or through an available and the results are product.

a commercially available switching regulator power supply, make sure to

When using a commercially available switching regulator points supply, ground the FG terminal (frame ground terminal).
 Install the emitter and receiver so that their vertical direction should match.

•If the protective height is 600 mm or more, use intermediate mounting brackets of specified quantities and locations according to the dimensions.

If the brackets described above are not used, ratings and performance cannot be not met.

*Sharing the power supply with other devices may cause the F3SJ to be affected by noise or voltage drop. It is recommended that the F3SJ use a dedicated power supply but do not share with other devices.

■Cleaning
Do not use thinner, benzene, or acetone for cleaning, because they affect the product's in parts and paint on the case. Object detection

The F3SJ cannot detect transparent and/or translucent objects

Wiring for auto reset mode

■Wiring when external device monitoring function is not used

monitoring input only.

[Muting System]

■Wiring when using muting and external device monitoring functions

- *3 F3SJ operates even when K3 is not connected.

 *4 Connect a muting lamp to at least any one of external indicator output1, external indicator output2, or auxiliary output 1. To connect a muting lamp to the auxiliary output 1, you must use the setting tool to change configuration.

 *5 The 2-Wire sensor cannot be used.

■ Wiring when external device monitoring function is not required

oring function is not used" of the basic system Wiring diagram is the same as that for "Wiring when external device m **Input/Output Circuit**

Input/output circuit

The numbers in white circles indicate the connector's pin numbers. The black circles indicate connectors for series conn

The words in brackets [] indicate the signal name for muting system

No.	Indicators		ON/Blinking	Description
1	Incident light level indicator			Indication status of LEVEL-1 to 5 shows the incident light level status of the F3SJ.
2	Error mode indicator	ERROR-A to C	ON/Blinking	Turns ON or blinks only when the F3SJ enters lockout, and the cause of the error is indicated by the status of ERROR-A to C indicators. When F3SJ are series-connected, the error mode indicator lamps turn ON or blink according to the details of each error. Affix the error mode label (included) near the F3SJ to allow for quick trouble shooting when errors occur. For details about error mode, refer to "■ Indication patterns of error mode indicator".
3	Power indicator	POWER	ON	Turns ON while the power is ON.
			Blinking	Blinks under maintenance status.
4	Interlock indicator	INTLK	ON	Turns ON when F3SJ is in interlock state.
			Blinking	Blinks when in lockout.
5	External device monitoring indicator	EDM	ON	Turns ON when an input is given to external device monitoring input.
6	Blanking/Test indicator	BLANKING /TEST	ON	Turns ON when the blanking function and warning zone function are enabled.
			Blinking	Blinks when external test is being performed.
7	OFF-state indicator	OFF	ON	Turns ON when safety outputs are OFF.
			Blinking	Blinks at following states;
				- Lockout state
				- One or more beams are blocked during the maintenance status.
8	ON-state indicator	ON	ON	Turns ON when safety outputs are ON.
			Blinking	Blinks when no beams are blocked during the maintenance status.
9	_	_	_	-

key cap for muting.

Affix this label when a keycap is used.

ator display patterns for a muting system (Indicator display different from a basic system are described.)

and cater display patterns for a mating system (indicator display different from a basic system are described.)					
No.	Indicators		ON/Blinking	Description	
5	Muting input 1 indicator	MUTE1	ON	Turns ON when an input is given to muting input 1.	
			Blinking	Blinks under muting/override.	
6	Muting input 2 indicator	MUTE2	ON	Turns ON when an input is given to muting input 2.	
			Blinking	Blinks under muting/override.	
9	Muting error indicator	MUTING ERROR	ON	Turns ON during a muting error.	
10	Blanking/Test indicator	BLANKING	ON	Turns ON when the blanking function is enabled.	
		/TEST	Blinking	Blinks when external test is being performed.	

■Indication patterns of the incident light level indicator

OFF

1 2 3 4 5	Incident light level
江江江江江	170% or higher of safety output ON level
	From 130 to less than 170% of safety output ON level
	From 100 to less than 130% of safety output ON level
江江	From 75 to less than 100% of safety output ON level
	From 50 to less than 75% of safety output ON level
	Less than 50% of safety output ON level

Operation is possible with incident light level of 100% or more, but to ensure stability, operate when all incident light level indicators

■ Indication patterns of error mode indicator

A B C	Main c ause of error
其■其	Mutual interference or disturbance light.
江東江	Power supply voltage of F3SJ is out of rated range. Insufficient current capacity of power supply.
五江 -	Light incidence to a blanking beam.
東東	Breakage, incorrect wiring of communication line, disconnection of series-connection cable, influence of noise, or other errors.
美美兵	The models of the emitter and receiver in a set are different.
- 美美	Function setting value configured by the setting tool is out of valid range.
其过其	End cap is not attached. Failure of internal circuit of F3SJ.
-×-	Relay is welded or recovery time is too long. Incorrect wiring or breakage of external device monitoring line.
	Incorrect wiring or breakage of interlock selection input line or reset input line.
単近★	Incorrect wiring or breakage of reset input line for a muting system.
*	Incorrect wiring of safety output 1 or 2. Failure of safety output circuit.
■ ★ ★	Incorrect wiring or breakage of series-connection cable.
美浜=	Incorrect wiring or circuit breakage of external indicator output.
英廷基	Auxiliary output 1 is detached or broken.
美 = 英	Broken series connection cable.
川 — —	Incorrect wiring or breakage of communication line.
***	Effect of noise. F3SJ Failure of internal circuit.

Refer to F3SJ User's manual for details.

Response Times / Power Cable Length

■ Response times

For series connections, use the calculations below. When 2 sets are series-connested Response time (ON to OFF):
Response time (ON to OFF):
Response time (OFF to ON):
Response time (OFF to ON):
Response time form the above calculation x 4 (ms)

When 3 sets are series-connested
Response time (ON to OFF):
Response time of 1st unit + Response time of 2nd unit
+ Response time of 3rd unit - 5 (ms)
Response time (OFF to ON);
Response time from the above calculation x 5 (ms)

When 4 sets are series-connested
Response time (ON to OFF):
Response time of 1st unit + Response time of 2nd unit
+ Response time of 3rd unit + Response time of 4th unit - 8 (ms)
Response time (OFF to ON):
Response time from the above calculation x 5 (ms)
