OMRON

Digital Temperature Controllers

User's Manual

E5□C

H174-E1-19

Preface

Thank you for purchasing an E5□C Digital Controller.

This manual describes how to use the E5□C. Read this manual thoroughly and be sure you understand it before attempting to use the Digital Controller and use the Digital Controller correctly according to the information provided. Keep this manual in a safe place for easy reference. Refer to the *E5□C Digital Controllers Communications Manual* (Cat. No. H175) for information on communications.

Terms and Conditions Agreement

Warranty, Limitations of Liability

Warranties

● **Exclusive Warranty**

Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

● **Limitations**

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

● **Buyer Remedy**

Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CON-SEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Application Considerations

Suitability of Use

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Disclaimers

Performance Data

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Safety Precautions

Definition of Precautionary Information

The following notation is used in this manual to provide precautions required to ensure safe usage of the E5□C Digital Controllers.
The safety precautions that are provided are extremely important to safety. Always read and heed the information provided in all safety precautions.
The following notation is used.

⚠ **CAUTION**	Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.

Symbols

Symbol		Meaning
Caution	⚠	• General Caution Indicates non-specific general cautions, warnings, and dangers.
	⚡	• Electrical Shock Caution Indicates possibility of electric shock under specific conditions.
Prohibition	🚫	• General Prohibition Indicates non-specific general prohibitions.
	🚫	• Disassembly Prohibition Indicates prohibitions when there is a possibility of injury, such as from electric shock, as the result of disassembly.
Mandatory Caution	❗	• General Caution Indicates non-specific general cautions, warnings, and dangers.

● **Safety Precautions**

⚠ CAUTION

Minor injury due to electric shock may occasionally occur.
Do not touch the terminals while power is being supplied.

Electric shock, fire, or malfunction may occasionally occur.
Do not allow metal objects, conductors, cuttings from installation work, moisture, or other foreign matter to enter the Digital Controller, the Setup Tool ports, or between the pins on the connectors on the Setup Tool cable.
Attach the cover to the front-panel Setup Tool port whenever you are not using it to prevent foreign objects from entering the port.

Minor injury from explosion may occasionally occur.
Do not use the product where subject to flammable or explosive gas.

Fire may occasionally occur.
Do not allow dirt or other foreign objects to enter a Setup Tool port, or between the pins on the connectors on the Setup Tool cable.

Minor electric shock, fire, or malfunction may occasionally occur.
Never disassemble, modify, or repair the product or touch any of the internal parts.

CAUTION - Risk of Fire and Electric Shock
(a) This product is UL listed as Open Type Process Control Equipment. It must be mounted in an enclosure that does not allow fire to escape externally.
(b) More than one disconnect switch may be required to de-energize the equipment before servicing.
(c) Signal inputs are SELV, limited energy. [1]
(d) Caution: To reduce the risk of fire or electric shock, do not interconnect the outputs of different Class 2 circuits. [2]
(e) E5CC-U, E5GC products: Use wires with heat resistance of 65°C min to wire the terminals because the maximum terminal temperature is 65°C.
Other models of products: Use wires with heat resistance of 75°C min to wire the terminals because the maximum terminal temperature is 75°C.

If the output relays are used past their life expectancy, contact fusing or burning may occasionally occur.
Always consider the application conditions and use the output relays within their rated load and electrical life expectancy. The life expectancy of output relays varies considerably with the output load and switching conditions.

[1] An SELV (separated extra-low voltage) system is one with a power supply that has double or reinforced insulation between the primary and the secondary circuits and has an output voltage of 30 V r.m.s. max. and 42.4 V peak max. or 60 VDC max.

[2] A class 2 circuit is one tested and certified by UL as having the current and voltage of the secondary output restricted to specific levels.

⚠ **CAUTION**

If you replace only the Main Unit of the E5DC or E5DC-B, check the condition of the Terminal Unit. If corroded terminals are used, contact failure in the terminals may cause the temperature inside the Digital Controller to increase, possibly resulting in fire. If the terminals are corroded, replace the Terminal Unit as well.	⚠
Loose screws may occasionally result in fire. Tighten the terminal screws to the specified torque of 0.43 to 0.58 N·m.*	❗
Set the parameters of the product so that they are suitable for the system being controlled. If they are not suitable, unexpected operation may occasionally result in property damage or accidents.	❗
A malfunction in the Digital Controller may occasionally make control operations impossible or prevent alarm outputs, resulting in property damage. To maintain safety in the event of malfunction of the Digital Controller, take appropriate safety measures, such as installing a monitoring device on a separate line.	❗

* The specified torque is 0.5 N·m for the E5CC-U.

Take adequate security measures against DDoS attacks (Distributed Denial of Service attacks), computer viruses and other technologically harmful programs, unauthorized access and other possible attacks before using this product.

Security Measures

Anti-virus protection Install the latest commercial-quality antivirus software on the computer connected to the control/monitor system and maintain to keep the software up-to-date.	❗
Security measures to prevent unauthorized access Take the following measures to prevent unauthorized access to our products. • Install physical controls so that only authorized personnel can access control/monitor systems and equipment. • Reduce connections to control/monitor systems and equipment via networks to prevent access from untrusted devices. • Install firewalls to shut down unused communications ports and limit communications hosts and isolate control/monitor systems and equipment from the IT network. • Use a virtual private network (VPN) for remote access to control/monitor systems and equipment. • Scan virus to ensure safety of SD cards or other external storages before connecting them to control/monitor systems and equipment.	❗

Data input and output protection
Validate backups and ranges to cope with unintentional modification
of input/output data to control/monitor systems and equipment.
• Checking the scope of data
• Checking validity of backups and preparing data for restore in case of
  falsification and abnormalities
• Safety design, such as emergency shutdown, in case of data tampering
  and abnormalities

Data recovery
Backup data and keep the data up-to-date periodically to prepare for
data loss.

Precautions for Safe Use

Be sure to observe the following precautions to prevent operation failure, malfunction, or adverse affects on the performance and functions of the product. Not doing so may occasionally result in unexpected events. Use the product within specifications.

- The product is designed for indoor use only. Do not use or store the product outdoors or in any of the following places.

  Places directly subject to heat radiated from heating equipment.

  Places subject to splashing liquid or oil atmosphere.

  Places subject to direct sunlight.

  Places subject to dust or corrosive gas (in particular, sulfide gas and ammonia gas).

  Places subject to intense temperature change.

  Places subject to icing and condensation.

  Places subject to vibration and large shocks.

- Use and store the Digital Controller within the rated ambient temperature and humidity.

  Gang-mounting two or more Digital Controllers, or mounting Digital Controllers above each other may cause heat to build up inside the Digital Controllers, which will shorten their service life. In such a case, use forced cooling by fans or other means of air ventilation to cool down the Digital Controllers.

- To allow heat to escape, do not block the area around the Digital Controller. Do not block the ventilation holes on the Digital Controller.

- Be sure to wire properly with the correct signal name and polarity of terminals.

- To connect bare wires, use copper stranded or solid wires.

  Use the wire sizes and stripping lengths given in the following table to prevent smoking and firing of the wiring material.

Recommended Wires

Model	Recommended wires	Stripping length
E5CC, E5EC, E5AC, E5DC, or E5GC (models with screw terminal blocks)	AWG24 to AWG18 (0.21 to 0.82 mm^2) Copper stranded or solid wires	6 to 8 mm
E5GC (models with screwless clamp terminal blocks)		8 to 12 mm
E5CC-U (plug-in models)	AWG24 to AWG14 (0.21 to 2.08 mm^2) Copper stranded or solid wires	5 to 6 mm
E5☐C-B (models with Push-In Plus terminal blocks) *1	0.25 to 1.5 mm^2 (equivalent to AWG24 to AWG16) Copper stranded or solid wires	With ferrules: 10 mm Without ferrules: 8 mm

*1 Use Ferrules with UL certification (R/C).

Connect only one wire to each terminal.

Use the specified size of crimped terminals to wire the E5CC, E5EC, E5AC, E5DC, and E5GC (models with screw terminal blocks) as well as the E5CC-U (plug-in models).

Crimp Terminal Sizes

Model	Crimp terminal size
E5CC, E5EC, E5AC, E5DC, or E5GC (models with screw terminal blocks)	M3, Width: 5.8 mm max.
E5CC-U (plug-in models)	M3.5, Width: 7.2 mm max.

For the E5□D-B (models with Push-In Plus terminal blocks), connect only one wire to each terminal.

For the E5□C (models with screw terminals), you can connect up to two wires of the same size and type, or two crimped terminals, to a single terminal.

When connecting two wires to one terminal on the E5GC (models with screwless clamp terminal blocks), use two crimped ferrules with a diameter of 0.8 to 1.4 mm and an exposed conductor length of 8 to 12 mm.[1]

[1] The E5GC (models with screwless clamp terminal blocks) underwent UL testing with one stranded wire connected.

- Do not wire the terminals that are not used.
- To avoid inductive noise, keep the wiring for the Digital Controller's terminal block away from power cables that carry high voltages or large currents. Also, do not wire power lines together with or parallel to Digital Controller wiring. Using shielded cables and using separate conduits or ducts is recommended.
  Attach a surge suppressor or noise filter to peripheral devices that generate noise (in particular, motors, transformers, solenoids, magnetic coils or other equipment that have an inductance component).
  When a noise filter is used at the power supply, first check the voltage or current, and attach the noise filter as close as possible to the Digital Controller.
  Allow as much space as possible between the Digital Controller and devices that generate powerful high frequencies (high-frequency welders, high-frequency sewing machines, etc.) or surge.
- Use the Digital Controller within the rated load and power supply.
- Make sure that the rated voltage is attained within 2 seconds of turning ON the power using a switch or relay contact. If the voltage is applied gradually, the power may not be reset or output malfunctions may occur.
- Make sure that the Digital Controller has 30 minutes or more to warm up after turning ON the power before starting actual control operations to ensure the correct temperature display.
- When executing self-tuning, turn ON power for the load (e.g., heater) at the same time as or before supplying power to the Digital Controller. If power is turned ON for the Digital Controller before turning ON power for the load, self-tuning will not be performed properly and optimum control will not be achieved.
- A switch or circuit breaker must be provided close to the Digital Controller. The switch or circuit breaker must be within easy reach of the operator, and must be marked as a disconnecting means for the Digital Controller.
- Wipe off any dirt from the Digital Controller with a soft dry cloth. Never use thinners, benzine, alcohol, or any cleaners that contain these or other organic solvents. Deformation or discoloration may occur.
- Design the system (e.g., control panel) considering the 2 seconds of delay in setting the Digital Controller's output after the power supply is turned ON.
- The output will turn OFF when you move to the Initial Setting Level. Take this into consideration when performing control.
- The number of non-volatile memory write operations is limited. Therefore, use RAM write mode when frequently overwriting data, e.g., through communications.
- Always touch a grounded piece of metal before touching the Digital Controller to discharge static electricity from your body.
- Use suitable tools when taking the Digital Controller apart for disposal. Sharp parts inside the Digital Controller may cause injury.
- For compliance with Lloyd's standards, the E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, E5AC, and E5DC must be installed under the conditions that are specified in *Shipping Standards*.

- On models with two Setup Tool ports (E5EC, E5EC-B, E5AC, E5DC, E5DC-B, and E5GC), do not connect cables to both ports at the same time. The Digital Controller may be damaged or may malfunction.
- Do not exceed the communications distance that is given in the specifications and use the specified communications cable.
- Do not turn the power supply to the Digital Controller ON or OFF while the USB-Serial Conversion Cable is connected. The Digital Controller may malfunction.
- Do not bend the communications cables past their natural bending radius. Do not pull on the communications cables.
- For the E5DC and E5DC-B, when you attach the Main Unit to the Terminal Unit, make sure that the hooks on the Main Unit are securely inserted into the Terminal Unit.
- For the E5CC-U, when you attach the Main Unit to the socket, make sure that the hooks on the socket are securely inserted into the Main Unit.
- Install the DIN Track vertically to the ground.
- For the E5DC and E5DC-B, always turn OFF the power supply before connecting the Main Unit to or disconnecting the Main Unit from the Terminal Unit, and never touch nor apply shock to the terminals or electronic components. When connecting or disconnecting the Main Unit, do not allow the electronic components to touch the case.
- Observe the following precautions when you remove the terminal block or pull out (draw out) the interior of the E5GC.
    - Follow the procedure given in *Drawing Out the Interior Body of the E5GC to Replace It* on page 2-21 of this manual.
    - Turn OFF the power supply before you start and never touch nor apply shock to the terminals or electric components.
      When you insert the interior body of the Digital Controller, do not allow the electronic components to touch the case.
    - Check for any corrosion on the terminals.
    - When you insert the interior body into the rear case, confirm that the hooks on the top and bottom are securely engaged with the case.
- Observe the following precautions when wiring the E5□C-B.
    - Follow the procedures given in *E5□C-B (Models with Push-In Plus Terminal Blocks)* on page 2-58 of this manual.
    - Do not wire anything to the release holes.
    - Do not tilt or twist a flat-blade screwdriver while it is inserted into a release hole on the terminal block. The terminal block may be damaged.
    - Insert a flat-blade screwdriver into the release holes at an angle. The terminal block may be damaged if you insert the screwdriver straight in.
    - Do not allow the flat-blade screwdriver to fall out while it is inserted into a release hole.
    - Do not bend a wire past its natural bending radius or pull on it with excessive force. Doing so may cause the wire to break.
    - Do not use crossover wiring to the E5CC-B or E5EC-B except for the input power supply and communications.
    - Do not use crossover wiring to the E5DC-B.
- Use a commercial power supply for the power supply voltage input to a Digital Temperature Controller with AC input specifications.
  Do not use the output from an inverter as the power supply.
  Depending on the output characteristics of the inverter, temperature increases in the Digital Temperature Controller may cause smoke or fire damage even if the inverter has a specified output frequency of 50/60 Hz.
- Do not use the Digital Controller if the front sheet is peeling. The front sheet is not a protective film designed to prevent scratches that may occur during packaging and transportation. Dispose of the protective film after use.

Installation Precautions

● **Service Life**

Use the Digital Controller within the following temperature and humidity ranges:

Temperature: −10 to 55 C (with no icing or condensation), Humidity: 25% to 85%

If the Digital Controller is installed inside a control board, the ambient temperature must be kept to under 55 C, including the temperature around the Digital Controller.

The service life of electronic devices like Digital Controllers is determined not only by the number of times the relay is switched but also by the service life of internal electronic components. Component service life is affected by the ambient temperature: the higher the temperature, the shorter the service life and, the lower the temperature, the longer the service life. Therefore, the service life can be extended by lowering the temperature of the Digital Controller.

When two or more Digital Controllers are mounted horizontally close to each other or vertically next to one another, the internal temperature will increase due to heat radiated by the Digital Controllers and the service life will decrease. In such a case, use forced cooling by fans or other means of air ventilation to cool down the Digital Controllers. When providing forced cooling, however, be careful not to cool down the terminals sections alone to avoid measurement errors.

● **Ensuring Measurement Accuracy**

When extending or connecting the thermocouple lead wire, be sure to use compensating wires that match the thermocouple types.

When extending or connecting the lead wire of the platinum resistance thermometer, be sure to use wires that have low resistance and keep the resistance of the three lead wires the same.

Mount the Digital Controller so that it is horizontally level.

If the measurement accuracy is low, check to see if input shift has been set correctly.

● **Resistance to Water (E5CC, E5CC-B, E5EC, E5EC-B, E5AC, and E5GC Only)**

The degree of protection is as shown below. Sections without any specification on their degree of protection or those with IP□0 are not waterproof.

Front panel: IP66

Rear case: IP20, Terminal section: IP00

When waterproofing is required, insert the Waterproof Packing on the backside of the front panel. Keep the Port Cover on the front-panel Setup Tool port of the E5EC, E5EC-B, and E5AC securely closed. The degree of protection when the Waterproof Packing is used is IP66. To maintain an IP66 degree of protection, the Waterproof Packing and the Port Cover for the front-panel Setup Tool port must be periodically replaced because they may deteriorate, shrink, or harden depending on the operating environment. The replacement period will vary with the operating environment. Check the required period in the actual application. Use 3 years or sooner as a guideline. If the Waterproof Packing and Port Cover are not periodically replaced, waterproof performance may not be maintained.

Precautions for Operation

- When using self-tuning, turn ON power for the load (e.g., heater) at the same time as or before supplying power to the Digital Controller. If power is turned ON for the Digital Controller before turning ON power for the load, self-tuning will not be performed properly and optimum control will not be achieved. When starting operation after the Digital Controller has warmed up, turn OFF the power and then turn it ON again at the same time as turning ON power for the load. (Instead of turning the Digital Controller OFF and ON again, switching from STOP Mode to RUN Mode can also be used.)
- Avoid using the Digital Controller in places near a radio, television set, or wireless installing. The Digital Controller may cause radio disturbance for these devices.

Shipping Standards

The E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, E5AC, and E5DC comply with Lloyd's standards. For compliance with these standards, install the Digital Controller in an installation location that meets the application conditions. Also, insert the Waterproof Packing on the Digital Controller.

Application Conditions

● Installation Location
The E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, E5AC, and E5DC are applicable to installation category ENV1 or ENV2 of Lloyd's standards. The installation environment must be equipped with air conditioning. The installation environment must be equipped with air conditioning. They cannot be used on the bridge or decks, or in a location subject to strong vibration.

Preparations for Use

Be sure to thoroughly read and understand the manual provided with the product, and check the following points.

Timing	Check point	Details
Purchasing the product	Product appearance	After purchase, check that the product and packaging are not dented or otherwise damaged. Damaged internal parts may prevent optimum control.
	Product model and specifications	Make sure that the purchased product meets the required specifications.
Setting the Unit	Product installation location	Provide sufficient space around the product for heat dissipation. Do not block the vents on the product.
Wiring	Terminal wiring	Do not subject the terminal screws to excessive stress (force) when tightening them. Make sure that there are no loose screws after tightening terminal screws to the specified torque of 0.43 to 0.58 N·m.[*1]
		Be sure to confirm the polarity for each terminal before wiring the terminal block and connectors.
		For the E5☐C-B (models with Push-In Plus terminal blocks), do not attempt to wire anything to the release holes.
		For the E5CC-B or E5DC-B (models with Push-In Plus terminal blocks), use crossover wiring only for the input power supply and communications. Do not exceed the maximum number of Digital Controllers given below if you use crossover wiring for the input power supply. 100 to 240 VAC Controllers: 16 max. 24 VAC/VDC Controllers: 8 max.
		Do not perform crossover wiring for the E5DC-B (models with Push-in Plus Terminal Blocks).
	Power supply inputs	Wire the power supply inputs correctly. Incorrect wiring will result in damage to the internal circuits.
Operating environment	Ambient temperature	The ambient operating temperature for the Digital Controller is −10 to 55 C[*2] (with no condensation or icing). To extend the service life of the product, install it in a location with an ambient temperature as low as possible. In locations exposed to high temperatures, if necessary, cool the products using a fan or other cooling method.
	Vibration and shock	Check whether the standards related to shock and vibration are satisfied at the installation environment. (Install the product in locations where the contactors will not be subject to vibration or shock.)
	Foreign particles	Install the product in a location that is not subject to liquid or foreign particles entering the product.

*1 The specified torque is 0.5 N·m for the E5CC-U.
*2 When two or more E5GC Digital Controllers are mounted, make sure that the ambient temperature of the Digital Controller does not exceed the allowable operating temperature range given below.
  Horizontal group mounting: −10 to 55 C
 Vertical group mounting of two Digital Controllers: −10 to 45 C
  Vertical group mounting of three or more Digital Controllers: −10 to 40 C
  For vertical group mounting, use Digital Controllers with screwless clamp terminal blocks.
  For E5EC models with two control outputs (QQ, QR, CQ, RR, CC, or PR) and 011, 012, 013, or 014 options, the ambient temperature for group mounting must be 45 C max.

Versions

Check the version on the nameplate on the E5□C Digital Controller or on the label on the packing box. If the version is not given, the version of the E5□C Digital Controller is version 1.0.

Revision History

A manual revision code appears as a suffix to the catalog number on the front cover of the manual.

Cat. No.	H174-E1-19

↑ Revision code

Revision code	Date	Revised content
01	December 2011	Original production
02	January 2012	**Page 9:** Made correction in *Precautions for Safe Use*.
03	December 2012	• Made changes accompanying the addition of programless communications and component communications (version 1.1). • Added E5EC/E5AC Digital Controllers with position-proportional control and E5AC Digital Controllers. (version 2.0). • Corrected mistakes.
04	July 2013	• Added version 1.0 of the E5DC. • Corrected mistakes.
05	December 2013	• Added E5CC-U. • Improved autotuning for heating/cooling control. • Added Mitsubishi FX-series PLCs and Keyence PLCs to information on programless communications (version 2.1). • Corrected mistakes.
06	April 2014	• Added version 2.2 of the E5GC. • Added an analog input type and simple transfer function for the E5CC-U (version 2.2). • Corrected mistakes.
07	July 2014	• Added E5DC-U. • Added simple transfer function and status message function to the E5DC (version 2.2). • Added seconds as the unit for the soak time (version 2.2). • Added Lloyd's standards for the E5DC. • Corrected mistakes.
08	August 2014	• Added the Valve Opening Monitor Selection and FB Moving Average Count parameters for E5EC/E5AC-PR□-8□□ (version 2.2).
09	June 2015	**Page 4-46:** Changed figure for burnout at bottom of page. **Pages 5-55 and 6-89:** Added note *5 and references to it in table. **Page 5-60:** Changed level to Operation Level for Remote SP Monitor. **Page 5-61:** Changed level in first sentence of *Remote SP Monitor* to Operation Level. **Page 6-5:** Added note below table for *Changed Parameters Only*. **Page 6-6:** Added note above table for *Parameter Mask Enable*. **Page 6-30:** Changed conditions given to right of "Manual Reset Value." **Page 6-56:** Added note at bottom of page. **Page 6-70:** Added note above table. **Page 6-93:** Added note above table in *Display Refresh Period*.
10	March 2016	• Added information on version 2.1 of the E5□C-B. • Corrected mistakes.
11	July 2016	• Corrected mistakes and added explanations.
12	October 2017	• Added E5□C-B Digital Controllers with current outputs. • Corrected mistakes.
13	March 2018	• Added precautions for wiring of screw terminal block types.
14	April 2019	• Added information on version 2.2 of the E5DC-B. • Corrected mistakes.
15	April 2019	Corrected mistakes.

16	September 2020	**Page 4-36:** Added descriptions of *PV Change Rate Alarm*. **Page 5-38:** Corrected mistakes of the default value of transfer output signal. **Pages 6-22 and 6-23:** Added descriptions of Heater Current 1 Value Monitor and Heater Current 2 Value Monitor. **Page 6-39:** Corrected descriptions of the transition diagram. **Page A-24:** Added descriptions to the countermeasure of *The communications wiring is not correct.* in the *Troubleshooting*.
17	July 2021	**Page 6-39:** Corrected descriptions of the transition diagram.
18	September 2022	Added information on *Safety Precautions*.
19	December 2025	Added information on *Precautions for Safe Use*.

Conventions Used in This Manual

Model Notation

"E5☐C" is used to indicate information that is the same for the E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, E5AC, E5DC, E5DC-B, and E5GC Digital Controllers. "E5☐C-B" is used to indicate information that is the same for the E5CC-B, E5EC-B, and E5DC-B Digital Controllers. "E5EC/E5AC-PR☐" or "Position-proportional Models" indicates the Digital Controllers with position-proportional control. "Standard Models" indicates other Digital Controllers.

Meanings of Abbreviations

The following abbreviations are used in parameter names, figures, and other descriptions. These abbreviations mean the following:

Symbol	Term
PV	Process value
SP	Set point
SV	Set value
AT	Auto-tuning
ST	Self-tuning
EU	Engineering unit*
LBA	Loop burnout alarm
HB	Heater burnout
HS	Heater short
RSP	Remote SP
LSP	Local SP

* "EU" stands for Engineering Unit. EU is used as the minimum unit for engineering units such as C, m, and g. The size of the EU depends on the input type. For example, when the input temperature setting range is −200 to 1,300 C, 1 EU is 1 C, and when the input temperature setting range is −20.0 to 500.0 C, 1 EU is 0.1 C. For analog inputs, the size of the EU depends on the decimal point position of the scaling setting, and 1 EU is the minimum scaling unit.

000 : Indicates items that can be used only with the E5☐C-☐-0☐☐.

800 : Indicates items that can be used only with the E5☐C-☐-8☐☐.

How to Read Display Symbols

The following tables show the correspondence between the symbols displayed on the displays and alphabet characters.

Introduction

1-1   Appearance, Features, and Functions of the E5□C

1-1-1   Appearance

E5GC

E5CC, E5CC-U, and E5CC-B

E5EC and E5EC-B

E5AC

E5DC and E5DC-B
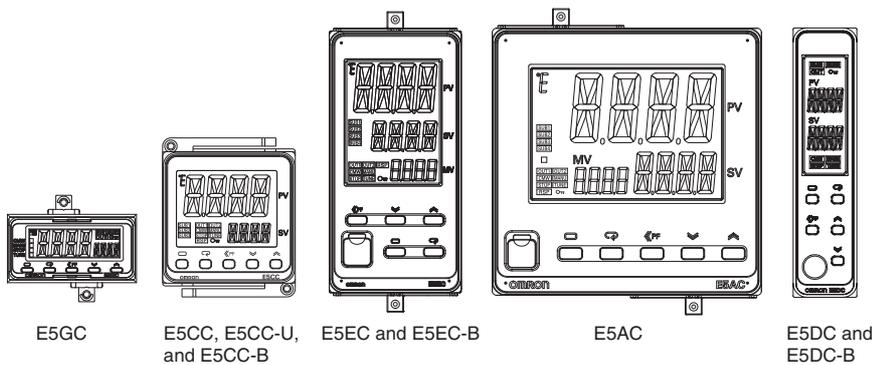

- A stylish design that gives a new look to control panels.
- Large display characters and white backlight for better visibility.
- A compact size to help downsize control panels.
- Much faster sampling and greater expandability than expected in this class of Digital Controller.
- Even easier to use than previous models.

1-1-2   Features

This section compares the features of the E5□C with the previous E5□N Digital Controllers.

High-speed Control Capability

Input sampling cycle: 50 ms
Control period: 0.1 s and 0.2 s have been added.
Integral/differential time unit: Setting in increments of 0.1 s has been added.

I/O Expandability

- Number of event inputs: Increased from 2 to 4 for the E5CC and from 4 to 6 for the E5EC/E5AC.
  The E5DC has only 1 event input.
  The E5GC or E5CC-B has 2 event inputs.
  The E5EC-B has 6 event inputs.
  * The E5DC-B does not support event inputs.
- Number of auxiliary outputs: Increased from 2 to 3 for the E5CC and from 3 to 4 for the E5EC/E5AC.
  The E5DC, E5DC-B, E5CC-U, E5GC, or E5CC-B has 2 auxiliary outputs.
  The E5EC-B has 4 auxiliary outputs.
- Remote SP inputs: A remote SP input that treats the external analog signal at the set point (SP) has been added.

Universal Input Capability

Universal input: The input sensor can be selected freely from the following: Thermocouple, resistance thermometer, ES1B Infrared Temperature Sensor, current, and voltage.

Easier Numeric Inputs with a Digit Shift Key

Digit shift: When setting the SP or other parameters, you can use a Shift Key (assigned to the PF Key) to shift the digit that is being set to aid changing the set values.

Setup Tool Port on Front Panel of the E5EC, E5EC-B, E5AC, E5DC or E5DC-B `000`

This port allows you to change or set parameters from the Setup Tool even when the Digital Controller is installed in a panel.

1-1-3   Main Functions

For details on particular functions and how to use them, refer to *Section 3 Part Names and Basic Procedures* and following sections.

● **Input Sensor Types**

You can connect the following sensors and signals to the universal input.

Thermocouple (temperature input):	K, J, T, E, L, U, N, R, S, B, W, PLII
Resistance thermometer (temperature input):	Pt100, JPt100
Infrared Temperature Sensor (temperature input):	ES1B
	10 to 70°C, 60 to 120°C, 115 to 165°C, 140 to 260°C
Current input (analog input):	4 to 20 mA DC, 0 to 20 mA DC
Voltage input (analog input):	1 to 5 VDC, 0 to 5 V DC, 0 to 10 V DC, 0 to 50 mVDC*

*   This range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

● **Control Outputs**

• A control output can be a relay output, voltage output (for driving SSR), or linear current output, depending on the model.

● **Adjusting PID Constants**

• You can easily set the optimum PID constants by performing AT (auto-tuning) with the limit cycle method or by performing ST (self-tuning) with the step response method.

• You can also add RT (robust tuning) to give priority to controlling stability. `000`

● **Alarms**
Standard Alarms

• You can output an alarm when the deviation, process value, set point, or manipulated value reaches a specified value.
• You can also output alarms for the PV rate of change and for loop burnouts.
• If necessary, a more comprehensive alarm function can be achieved by setting a standby sequence, alarm hysteresis, auxiliary output close in alarm/open in alarm, alarm latch, alarm ON delay, and alarm OFF delay.

HB and HS Alarms

• With models with the optional HB and HS alarms, you can detect heater burnout and heater short alarms based on CT inputs.

Integrated Alarm

• You can output an integrated alarm if a standard alarm, HB alarm, or HS alarm turns ON.

● **Event Inputs**

• With any model that supports event inputs, you can use external contact or transistor inputs to achieve any of the following functions: Switching set points (Multi-SP No. Switch, 8 points max.), switching RUN/STOP, switching between automatic and manual operation, starting/resetting the program, inverting direct/reverse operation, switching the SP mode100% AT execute/cancel, 40% AT execute/cancel, setting change enable/disable, communications write enable/disable, and canceling the alarm latch.

● **Communications Functions**

With any E5□C model that supports communications, you can use CompoWay/F, Modbus-RTU,[1] programless, and component communications.

    *1   Modbus is a registered trademark of Schneider Electric.

    *2   The E5CC-U does not support communications.

● **Transfer Output**

With any model that provides a transfer output, you can output the set point, process value, manipulated variable, or other values as a 4 to 20-mA or 1 to 5-V transfer output. The E5CC-U*, E5DC*, E5DC-B and E5GC do not have a transfer output, but if the control output is a linear current output, the control output can be used as a simple transfer output.

    *   The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).

● **Remote SP Input**

With any model that provides a remote SP input, you can set the set point with an analog input.

    *   The E5CC-U, E5DC, E5GC, E5CC-B, or E5DC-B does not have a remote SP input.

1-2 I/O Configuration and Model Number Legend

1-2-1 I/O Configuration
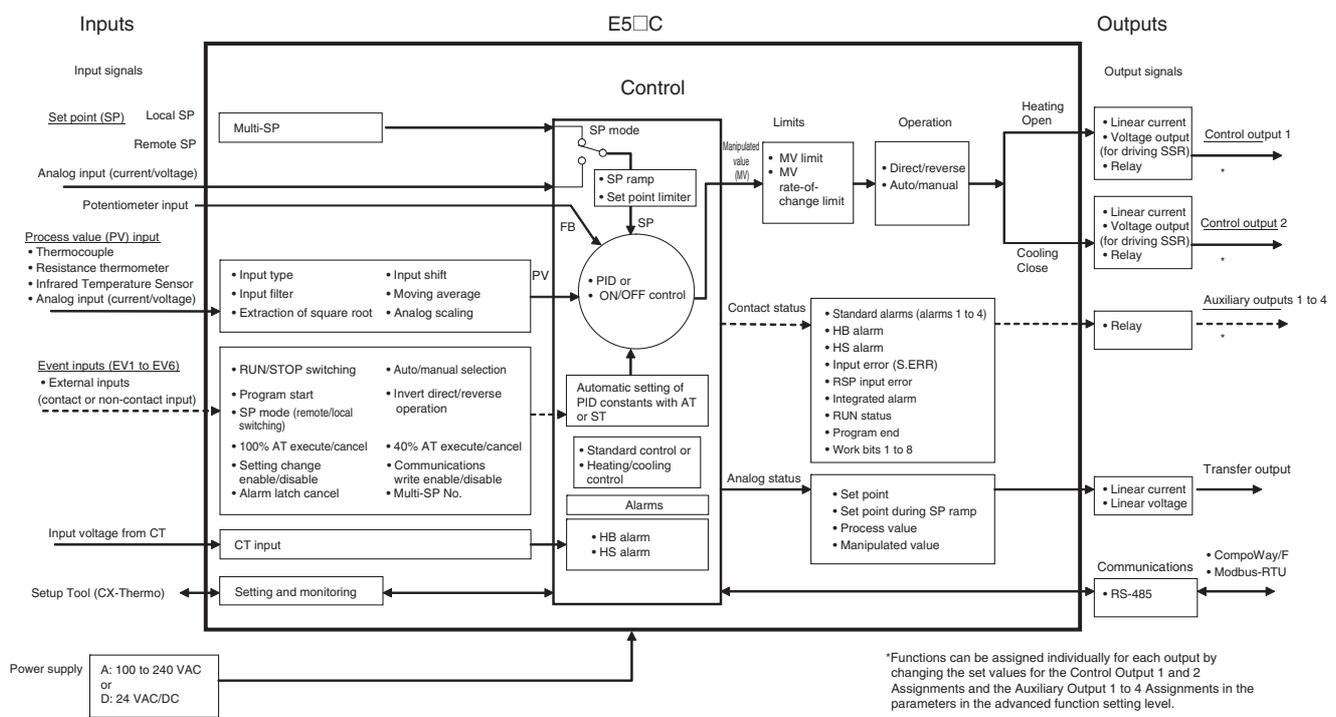

Note: Not all models support these functions. For details, refer to *1-2-2 Model Number Legends*.

1-2-2 Model Number Legends

$45 \, ^{+0.6}_{0}$

$L2 = (24 \times n - 1.5) \, ^{+1.0}_{0}$
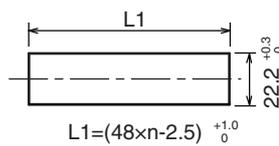

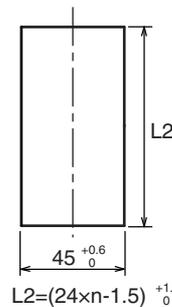

n: Number of mounted Controllers ($2 \leq n \leq 6$)

- The E5CC-U, E5DC, and E5DC-B cannot be waterproofed.
- Waterproofing is not possible when group mounting several Digital Controllers.
- The recommended panel thickness is 1 to 5 mm for the E5CC, E5CC-U, and E5CC-B, and 1 to 8 mm for E5EC, E5EC-B, E5AC, E5DC, E5DC-B, and E5GC.
- Except for the E5GC with a screwless clamp terminal block, Digital Controllers must not be group mounting vertically. (Observe the recommended mounting space limits.)
- When two or more Digital Controllers are mounted, make sure that the ambient temperature of the Digital Controllers does not exceed the allowable operating temperature specified in the specifications.

*1   For E5EC models with two control outputs (QQ, QR, CQ, RR, CC, or PR) and 011, 012, 013, or 014 options (shown below), the ambient temperature for group mounting must be 45°C max.

E5EC-□□ □ □ □ M-□□□

QQ, QR,
RR, CC, CQ, PR

011, 012,
013, 014
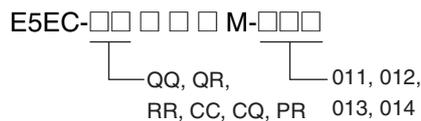

To mount these models at an ambient temperature of 55°C, install them at the following intervals.
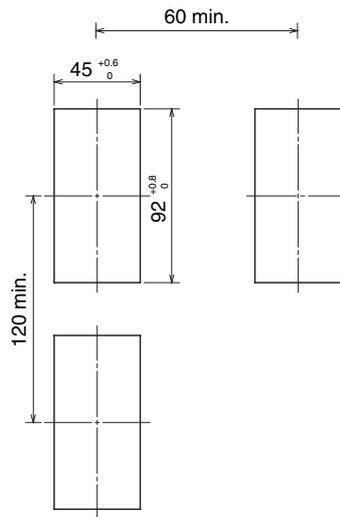

*2   When two or more E5GC Digital Controllers are mounted, make sure that the ambient temperature of the
        Controller does not exceed the allowable operating temperature range given below.
        Horizontal group mounting: −10 to 55°C
        Vertical group mounting of two Digital Controllers: −10 to 45°C
        Vertical group mounting of three or more Digital Controllers: −10 to 40°C
        Note: Use Digital Controllers with screwless clamp terminal blocks for vertical group mounting. If you use
                vertical group mounting, you cannot draw out the interior body of the Digital Controllers.

2-1-3   Mounting

▌E5CC, E5CC-B, and E5CC-U

There are two models of Terminal Covers that you can use with the E5CC.

E53-COV17
Terminal Cover
(Sold separately.)

Adapter

Waterproof packing

Panel

Adapter

E53-COV23
Terminal Cover*
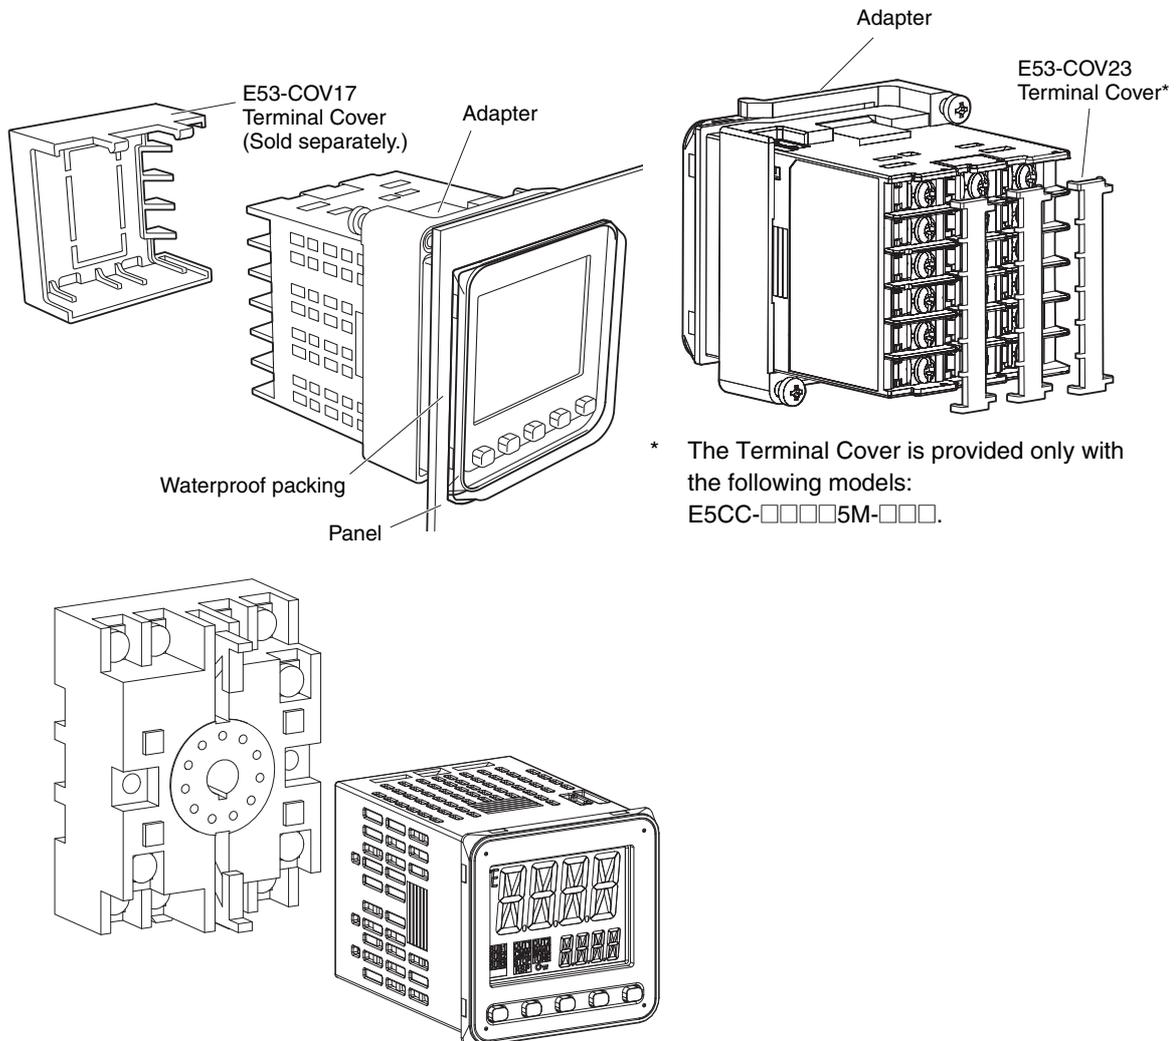

*   The Terminal Cover is provided only with
the following models:
E5CC-□□□□5M-□□□.

For the Wiring Socket for the E5CC-U, purchase the P2CF-11 or PG3A-11 separately.

● Mounting to the Panel

(1)   For waterproof mounting, waterproof packing must be installed on the Digital Controller. Waterproofing is not possible when group mounting several Digital Controllers. The E5CC-U cannot be waterproofed even if the Waterproof Packing is inserted.

(2)   Insert the E5CC, E5CC-B, or E5CC-U into the mounting hole in the panel.

(3)   Push the Adapter from the terminals up to the panel, and temporarily fasten the E5CC, E5CC-B, or E5CC-U.

(4)   Tighten the two fastening screws on the Adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N·m.

● **Mounting the Terminal Cover (E5CC Only)**

Slightly bend the E53-COV23 Terminal Cover to attach it to the terminal block as shown in the following diagram. The Terminal Cover cannot be attached in the opposite direction. Or, you can use the E53-COV17 Terminal Cover. Make sure that the "UP" mark is facing up, and then attach the E53-COV17 Terminal Cover to the holes on the top and bottom of the Digital Controller.

* The Terminal Cover is provided only with the following models: E5EC-□□□□5M-□□□.

● Mounting to the Panel

(1) For waterproof mounting, waterproof packing must be installed on the Digital Controller. Waterproofing is not possible when group mounting several Digital Controllers.

(2) Insert the E5EC, E5EC-B, or E5AC into the mounting hole in the panel.

(3) Push the Adapter from the terminals up to the panel, and temporarily fasten the E5EC, E5EC-B, or E5AC.

(4) Tighten the two fastening screws on the Adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N·m.

● Mounting the Terminal Cover (E5EC or E5AC Only)

Slightly bend the E53-COV24 Terminal Cover to attach it to the terminal block as shown in the following diagram. The Terminal Cover cannot be attached in the opposite direction.

Slightly bend the E53-COV24 Terminal Cover in the direction shown by the arrows to attach it to the terminal block.

Enlarged Illustration of Terminal Section
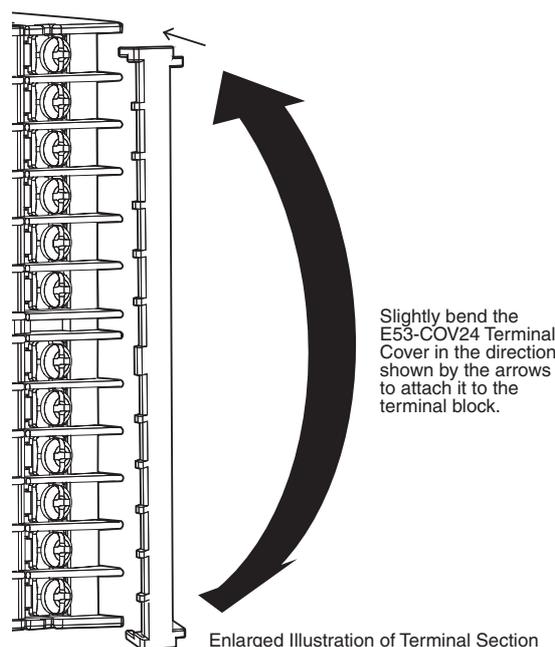

Common Procedure of E5DC and E5DC-B

● **Mounting to the Panel**
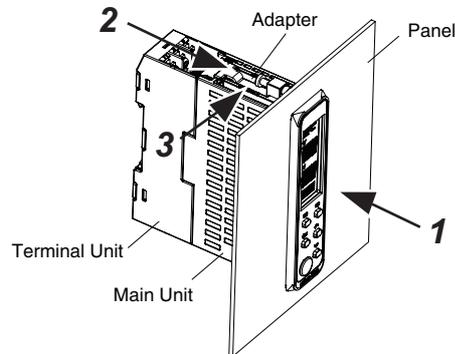

1 **Insert the E5DC or E5DC-B into the mounting hole in the panel. (Attach the Terminal Unit after you insert the Main Unit.)**

2 **Push the Adapter from the Terminal Unit up to the panel, and temporarily fasten the E5DC or E5DC-B.**

3 **Tighten the two fastening screws on the Adapter. Alternately tighten the two screws little by little to maintain a balance.**
Tighten the screws to a torque of 0.29 to 0.39 N·m.

E5DC

● **Mounting to and Removing from DIN Track**

• Mounting a Unit
   Pull down the DIN Track hook on the Terminal Unit and catch the top hook on the DIN Track.
   Press the Unit onto the DIN Track until the DIN Track hooks are locked in place.
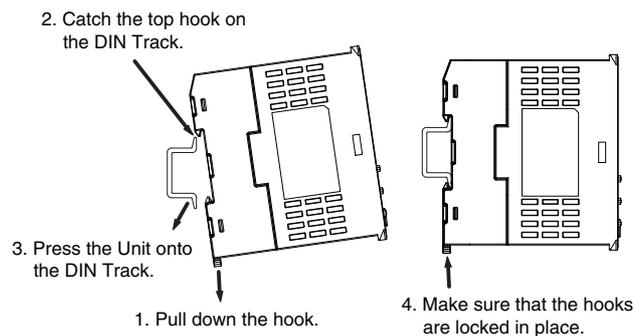

• Removing a Unit
   Pull down on the DIN Track Hook with a flat-blade screwdriver and lift up the Unit.
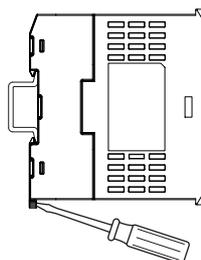

● **Removing the Main Unit**

Press in the two hooks on the Main Unit and remove the Main Unit from the Terminal Unit.

(1)

(2) Pull out the Main Unit.

(1) Push in the hooks.
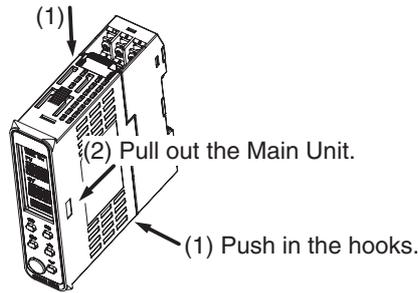

● **End Plate Installation**

Make sure to attach PFP-M End Plates to the ends of the Units.
• End Plate (sold separately)
  PFP-M

● **Mounting the DIN Track**

Refer to *Mounting the DIN Track* on page 2-13.

Linked Mounting/Removal of the E5DC-B

A built-in connector for linking is provided in the E5DC-B that enables linked mounting of units together with DIN Track and panel mounting. As a result, crossover wiring is not required for communication and power supply. Up to 16 units can be linked.

Linking connector
(female side)

Linking connector
(male side)
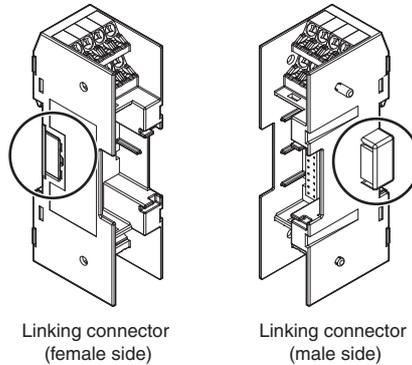

▢ Precautions for Correct Use

- Wiring
  When linking the units together, connect the power cable only to the unit at the left end of the linkage block. Incorrect wiring can be shorted inside the unit resulting in damage to the unit. Do not perform crossover wiring between each linkage block, or to another device. This could result in a breakdown or incorrect operation.

Prohibited Multiplex
Power Input Wiring
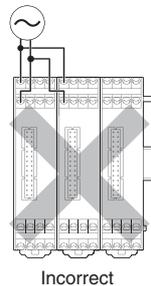

Prohibited Crossover Wiring

Incorrect

Incorrect
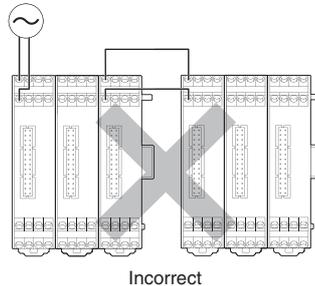

● Mounting the DIN Track

Attach the DIN Track to the inside of the control panel with screws to at least three locations.
- DIN Track (sold separately)/PFP-50N (50 cm) and PFP-100N (100 cm)
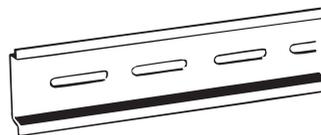

Install the DIN Track vertically to the ground.

Vertical: OK

Horizontal: NG

● **Linked Mounting on DIN Track**

1	**Remove the connector cover of the Terminal Unit from the side that is to be linked, and mount the Unit on the DIN Track.**	End Plate · · · Connector cover (Provided) · · · 2 · · · 1 · · · Left side:
2	**Link the connectors of the Terminal Units.**	
3	**Wire the Terminal Units.**	3 · · · 4
4	**Insert the Main Unit into the Terminal Unit.**	
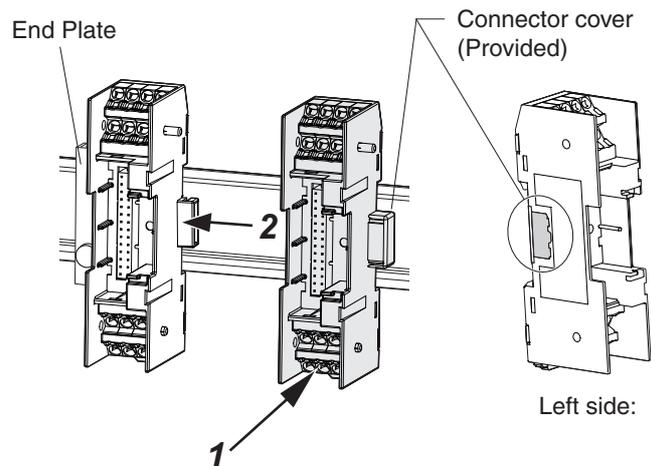

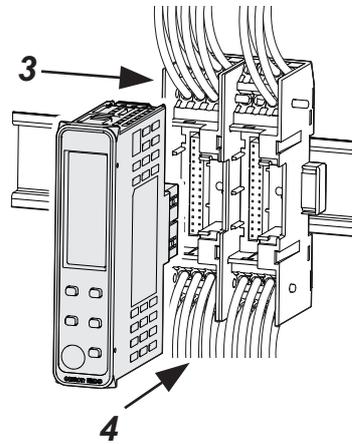

✓ **Precautions for Correct Use**

• When N units are linked together, the inrush current will be equal to N times that for 1 unit. Be sure to use the external fuse with the appropriate fusing characteristics, and the breaker with the appropriate tripping characteristics to ensure that the fuse does not melt and the breaker is not activated due to the inrush current. The inrush current per Unit is 30 A or less.

• Do not remove the connector cover from connectors that are not to be linked. The connector covers have been mounted on the product during shipment.

• Do not add or separate the units during power-on.

● Removing from the DIN Track

1 **Remove the Main Unit from the Terminal Unit.** *2* **Remove the Terminal Units.**	
3 **Remove the Terminal Units from the DIN Track.**	
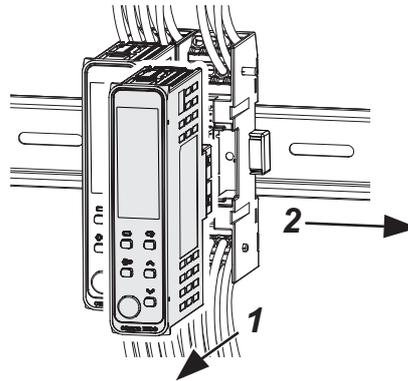

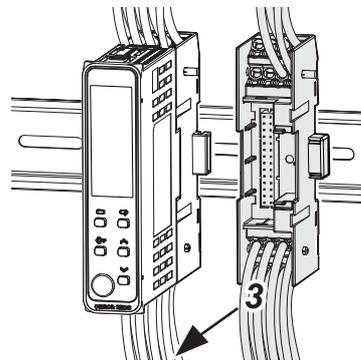

> 📖 **Additional Information**

Removing the Terminal Unit Using a Flat-blade Screwdriver
- There are two slits on the right side of the Terminal Unit. When Terminal Units are linked, these slits act as gaps for inserting a flat-blade screwdriver. The Terminal Units can be easily removed by inserting a flat-blade screwdriver in these gaps. Perform this operation after removing the Main Unit.

Gaps for inserting the flat-blade screwdriver

Slits
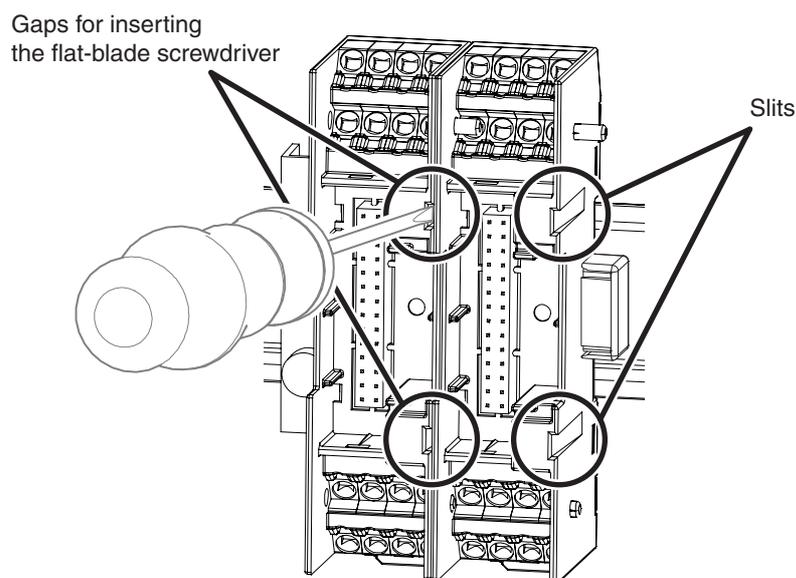

- For Recommended Flat-blade Screwdriver, refer to *Recommended Flat-blade Screwdriver* on page 2-61.

● **Linked Mounting on the Mounting Panel**

1   **Push the Main Unit into the mounting holes on the mounting panel.**

2   **Mount a wired Terminal Unit on the Main Unit.**

3   **Push the Adapter from the Terminal Unit side up to the Mounting Panel, and temporarily fasten the Main Unit. Tighten the two fastening screws on the Adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N·m.**
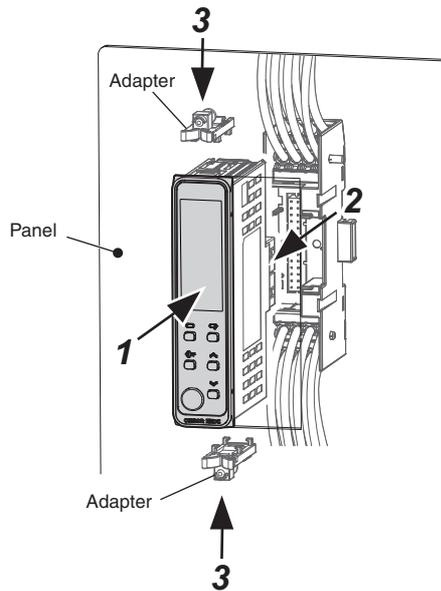

4   **Remove the connector cover of the wired Terminal Unit from the side that is to be linked, and link the connectors.**

5   **Push the Main Unit into the mounting holes on the mounting panel, and attach it to the Terminal Unit.**
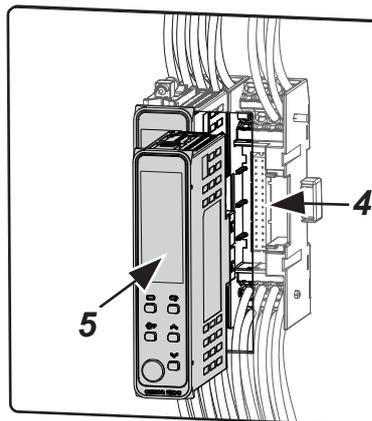

6 **Push the Adapter from the Terminal Unit up to the panel, and temporarily fasten the E5DC. Tighten the two fastening screws on the Adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N·m.**
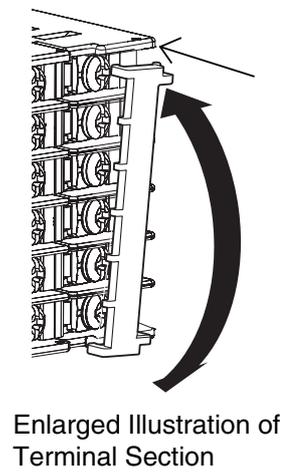

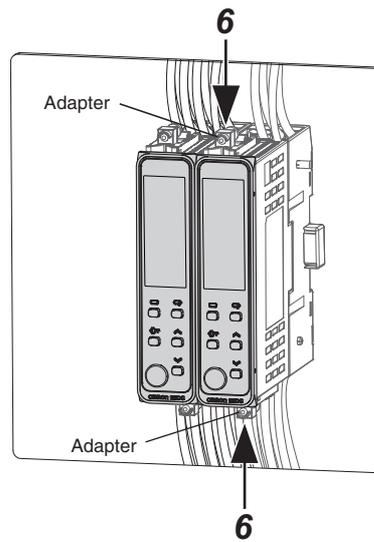

Precautions for Correct Use

- Do not remove the connector cover from connectors that are not to be linked. The connector covers have been mounted on the product during shipment.
- Do not add or separate the units during power-on.

● **Removing from the Mounting Panel**

1 **Remove the Adapter attached to the Main Unit.**
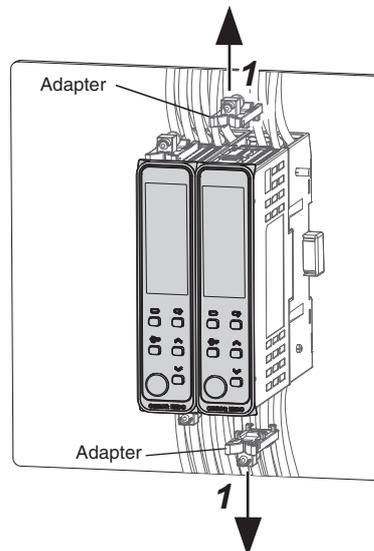

2   **Remove the Main Unit from the Terminal Unit.**
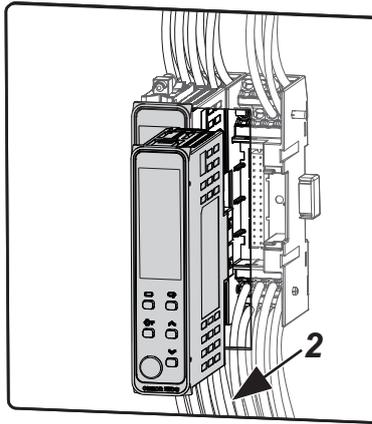

3   **Remove the Terminal Units.**
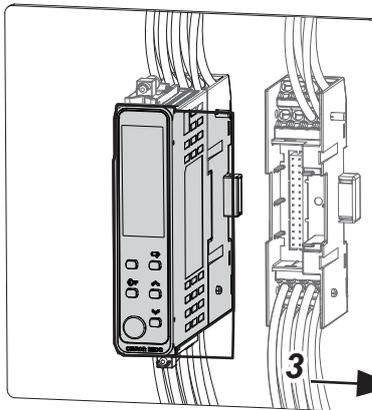

● **E5GC**
Mounting to the Panel
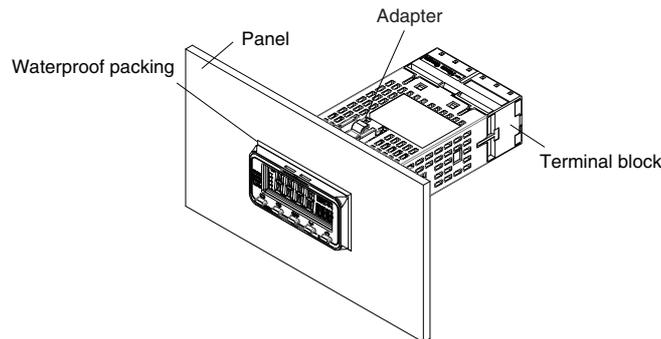

(1)   When waterproofing is required, insert the Waterproof Packing on the backside of the front panel. Digital Controllers cannot be waterproofed when they are mounted side by side.

(2)   Insert the E5GC into the mounting hole in the panel.

(3)   Use two Adapters, either on the top and bottom or on the right and left.

(4)   Push the Adapter from the terminals up to the panel, and temporarily fasten the Digital Controller.

(5)   Tighten the two fastening screws on each Adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N·m.

Drawing Out the Interior Body of the E5GC to Replace It

You can use the Y92F-55 Draw-out Jig to remove the interior body of the Digital Controller from the case to perform maintenance without removing the terminal leads. This is possible for only the E5GC. Check the specifications of the case and Digital Controller before removing the interior body from the case.

1. Drawing Out the Interior Body from the Rear Case

(1)   Slowly insert the Draw-out Jig into the Draw-out Jig insertion holes laterally until it clicks into place. (There is a hole at both the top and bottom.) (If you attempt to draw out the interior body of the Digital Controller when only one hook is engaged, the Digital Controller may be damaged.)
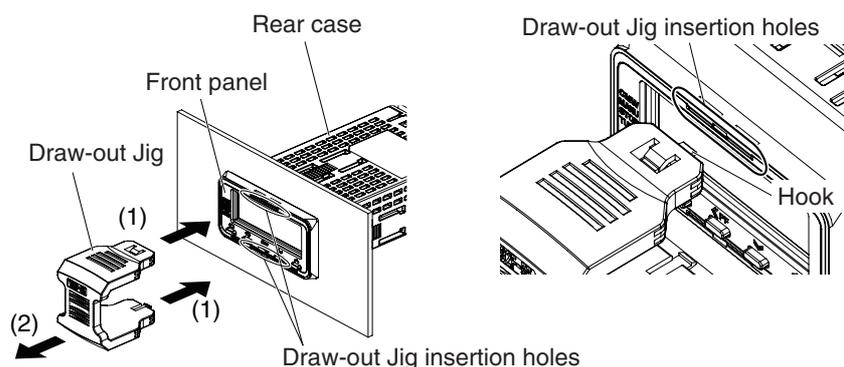

(2)   Pull out the Draw-out Jig together with the front panel. Do not pull with excessive force. Slowly pull out the Digital Controller laterally. (If you pull the interior body out at an angle, the Digital Controller may be damaged.)

(3)   After the interior body is free from the rear case, support the interior body with one hand and draw it out slowly in a horizontal direction.

2. Inserting the Interior Body into the Rear Case

(1)   When inserting the interior body back into the rear case, make sure the PCBs are parallel to each other, mount the sealing rubber, and press the interior body toward the rear case and into position, making sure that the sealing rubber does not move.

(2)   When you press the Digital Controller into position, press down on the rear case hooks so that the case hooks securely lock in place. (There are rear case hooks at both the top and bottom of the rear case.) If the Digital Controller is not correctly mounted into the rear case, the rear case may not be waterproof. When inserting the Digital Controller, do not allow the electronic components to touch the rear case.

Top View

Sealing rubber position   PCB   Rear case hooks

(1)

Case hooks
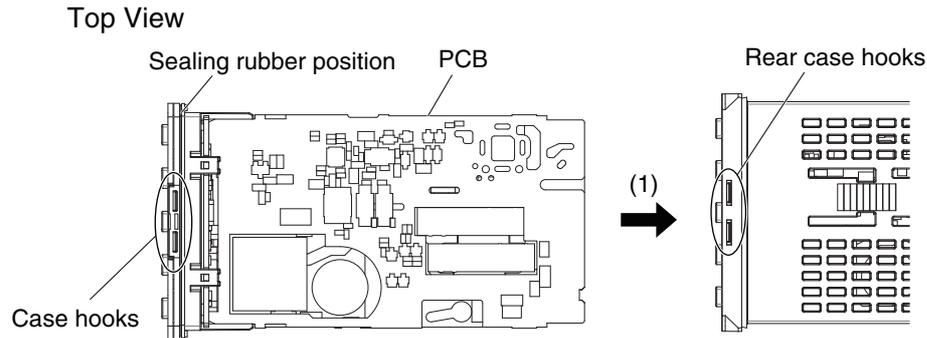

* Make sure that the top and bottom PCBs are parallel to each other, and then press the interior body toward the rear case.

(2)   Rear case hooks

(2)
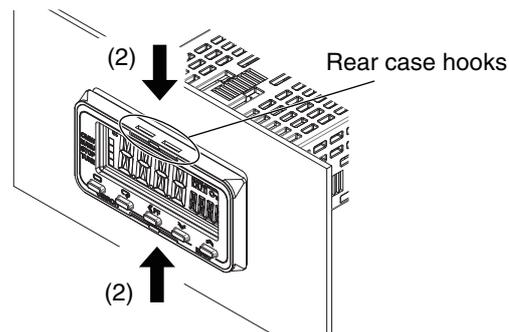

● **Removing the Draw-out Jig when only one hook is caught in the Draw-out Jig insertion hole**

(1)   Pull the Draw-out Jig slowly in the direction shown in the figure. (This step is the same even if the other hook is caught.)

(2)   Confirm that the Draw-out Jig is free of the Draw-out Jig insertion hole.

(3)   If the interior body separates from the rear case, slowly press the interior body into the rear case in a horizontal direction.

If you do not follow the procedures above, the Digital Controller may be damaged.

(1)

(2)

(3)
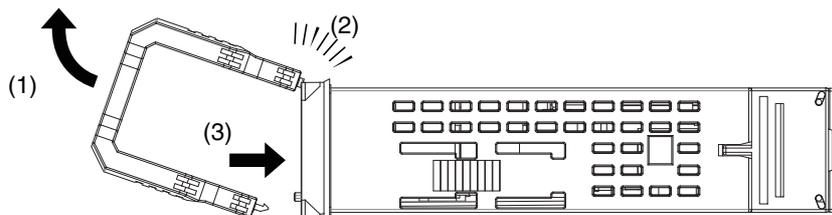

● **Removing the Terminal Block**

The terminal block can be removed from the E5GC. Doing so is not possible with the E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, or E5AC.

(1)   Insert a flat-blade screwdriver into the tool holes (one on the top and one on the bottom) to release the hooks. Do not apply excessive force.

Insert a tool.

Flat-blade screwdriver (unit: mm)

20 min.

0.4   2.0
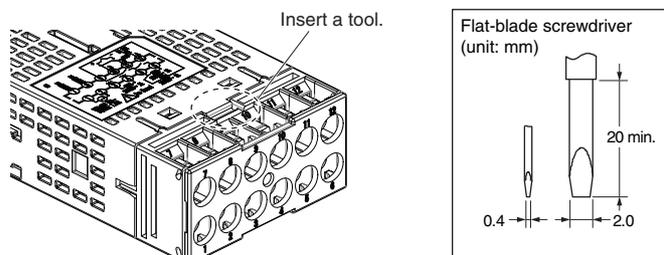

(2)   Pull the terminal block out while the hooks are released.
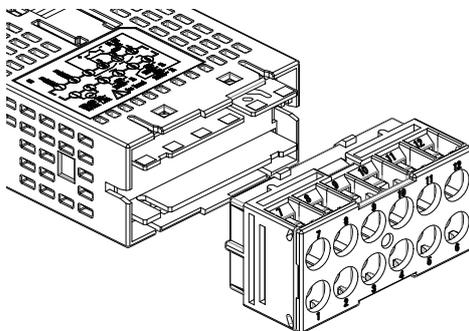

Note: The method for removing the terminal block is the same for both screw terminal blocks and screwless clamp terminal blocks.

Do not connect the wrong type of terminal block to the Digital Controller. For example, do not connect a screwless clamp terminal block to a Digital Controller for a screw terminal block. Performance may be affected.

2-2   Using the Terminals

2-2-1   E5CC Terminal Block Wiring Example

● Terminal Arrangement

The terminals block of the E5CC is divided into five types of terminals: control outputs 1 and 2, sensor input, auxiliary outputs, input power supply, and options.

Precautions for Correct Use

When you purchase the Digital Controller, it will be set for a K thermocouple (input type = 5) by default. If a different sensor is used, an input error ($5.ERR$) will occur. Check the setting of the Input Type parameter.

Control Outputs 1 and 2

● Model Numbers
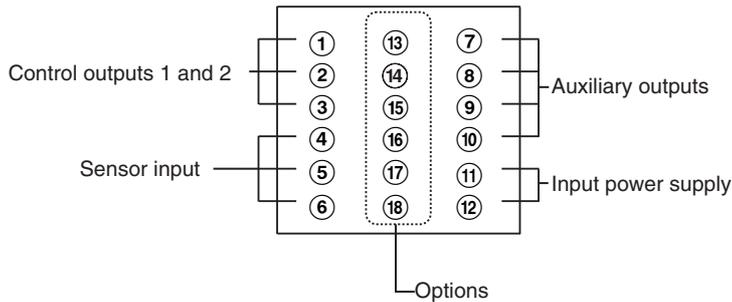

The specifications for control outputs 1 and 2 are given in the following location in the model number.

E5CC-□□ □ □ □ M-□□□

└── Control outputs 1 and 2

Code	Output type	Specification
RX	1 relay output	250 VAC, 3 A (resistive load)
QX	1 voltage output (for driving SSR)	12 VDC, 21 mA
CX	1 linear current output	4 to 20 mA DC or 0 to 20 mA DC with load of 500 Ω max.
QQ	2 voltage outputs (for driving SSRs)	12 VDC, 21 mA
CQ	1 linear current output and 1 voltage output (for driving SSRs)	4 to 20 mA DC or 0 to 20 mA DC with load of 500 Ω max. for current output and 12 VDC, 21 mA for voltage output

● Terminal Details

Do not connect anything to the terminals that are shaded gray.

RX	QX	CQ
Control output 1 — ① ② ③ — Relay output	Control output 1 — ① ② ③ — Voltage output (for driving SSR) + −	Control output 1 — ① ② + Linear current output Control output 2 — ③ + Voltage output (for driving SSR) −

Remote SP Input
    Current: 4 to 20 or 0 to 20 mA DC
    Voltage: 1 to 5, 0 to 5, or 0 to 10 VDC

● Terminal Details

Do not connect anything to the terminals that are shaded gray.
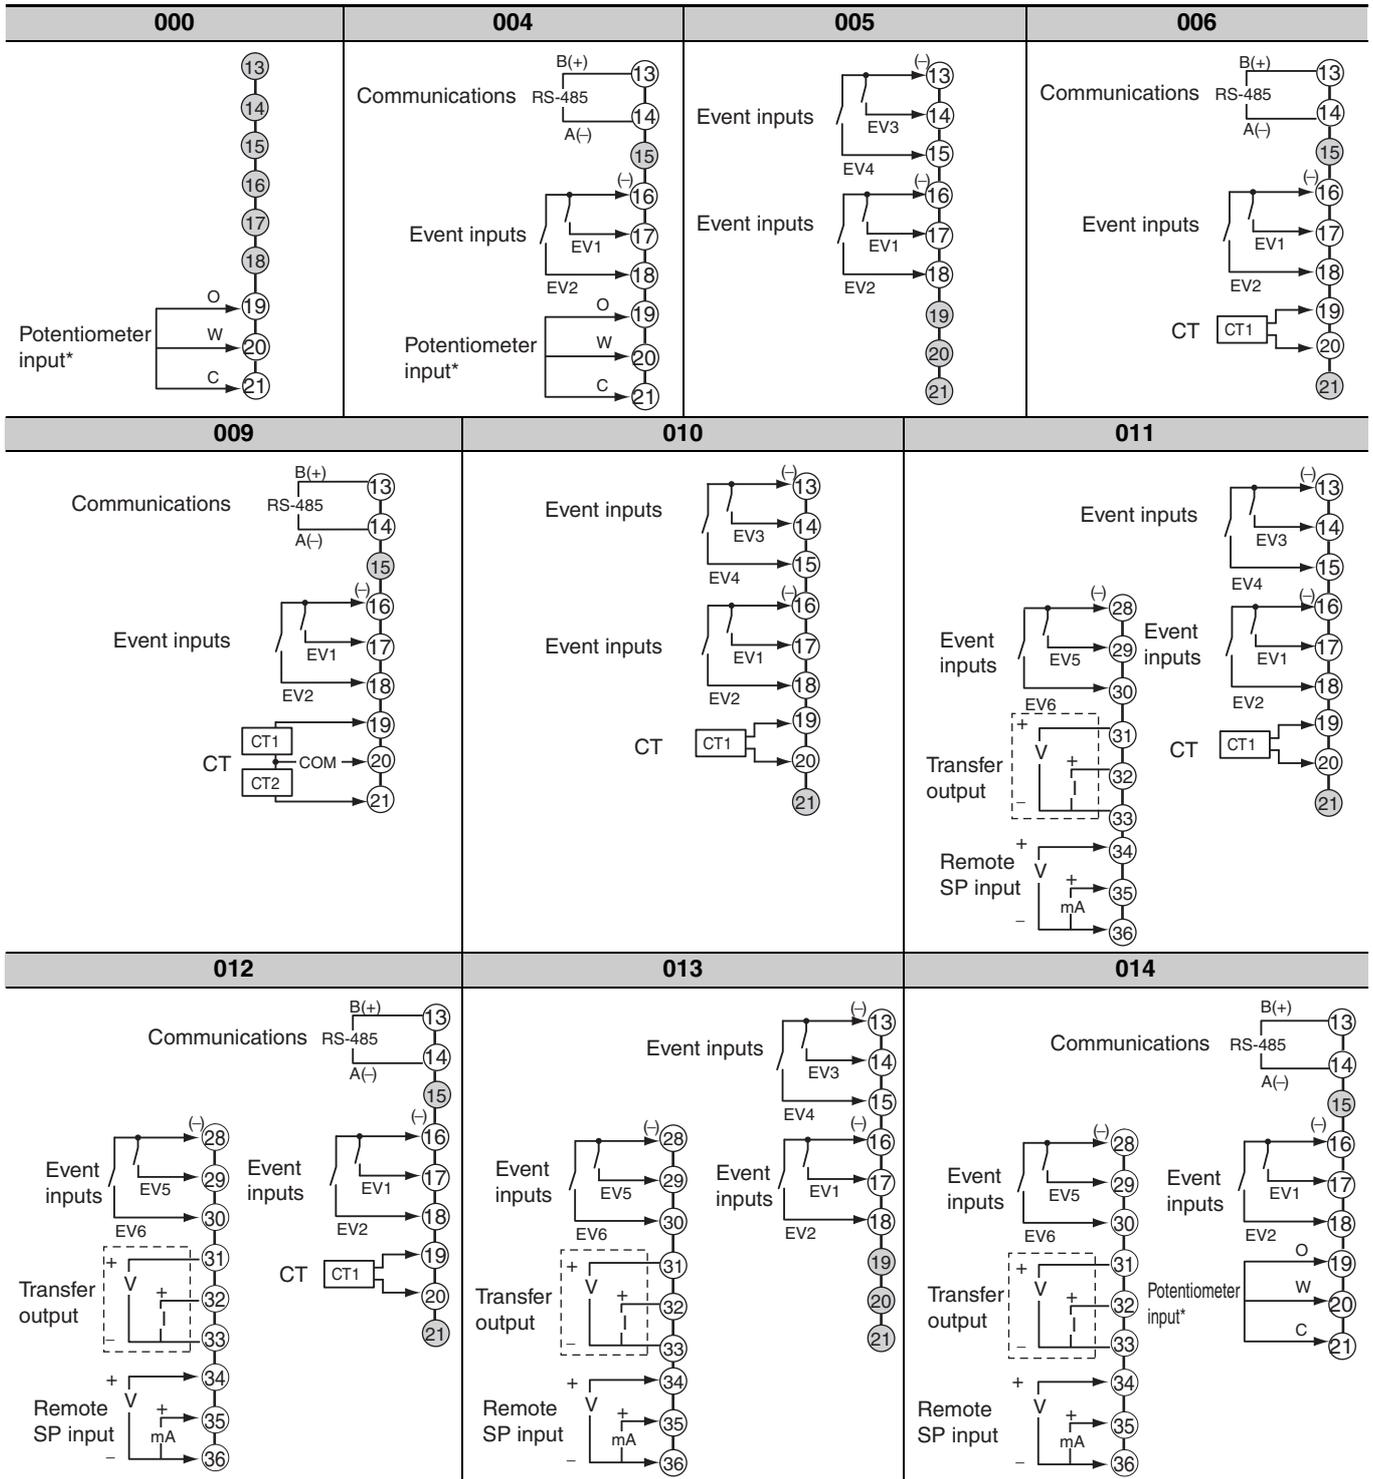

*   Can be used for a Position-proportional Model.
Note: Use non-voltage inputs for the event inputs.

The polarity for a non-contact input is indicated by "(-)."

2-2-5   E5EC-B Terminal Block Wiring Example

● **Terminal Arrangement**

The terminals block is divided into five types of terminals: control output 1, sensor input, auxiliary outputs, input power supply, and options.
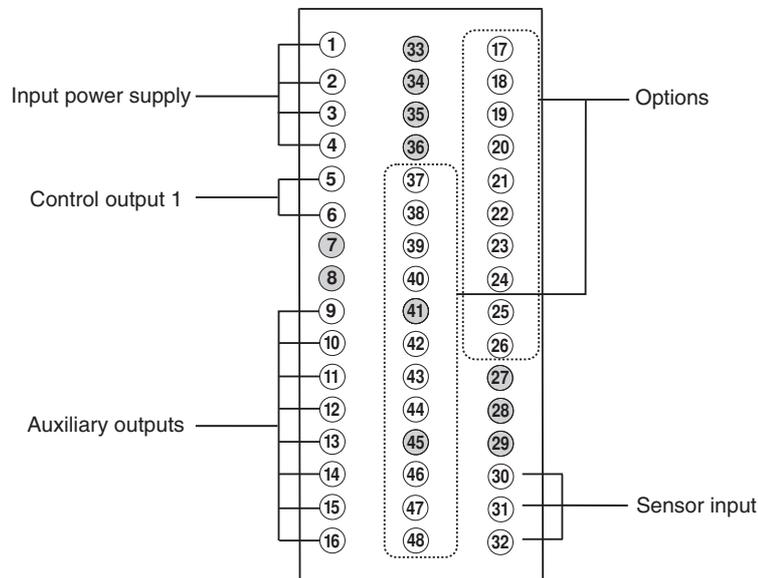

Note: The terminals that are shaded gray are not used.

📑 **Precautions for Correct Use**

When you purchase the Digital Controller, it will be set for a K thermocouple (input type = 5). If a different sensor is used, an input error ($5.ERR$) will occur. Check the setting of the Input Type parameter.

Control Output 1

● **Model Numbers**

The specification for control output 1 is given in the following location in the model number.

E5EC-☐☐ ☐ ☐ B M-☐☐☐

└── Control output 1

Code	Output type	Specification
RX	1 relay output	250 VAC, 5 A (resistive load)
QX	1 voltage output (for driving SSR)	12 VDC, 40 mA
CX	1 linear current output	4 to 20 mA DC or 0 to 20 mA DC with load of 500 Ω max.

● **Terminal Details**

RX	QX	CX

Sensor Input

● Model Numbers

All models have universal sensor inputs, so the code in the model number is always "M."

E5EC-□□ □ □ S M-□□□

└── Sensor input

● Terminal Details

Do not connect anything to the terminals that are shaded gray.

TC (thermocouple)	Pt (resistance thermometer)	I (current)	V (voltage)

Precautions for Correct Use

- When complying with EMC standards, the line connecting the sensor must be 30 m or less. If the cable length exceeds 30 m, compliance with EMC standards will not be possible.
- The sensor input is not electrically isolated from the internal circuits. If you use a grounded thermocouple, do not connect one of the sensor input terminals to ground. (If the sensor input terminals are connected to ground, errors will occur in the measured temperature as a result of leakage current.)

Auxiliary Outputs

● Model Numbers

The number of auxiliary outputs is given in the following location in the model number.

E5EC-□□ □ □ S M-□□□

└── No. of auxiliary outputs

Code	Auxiliary outputs	Specification
2	Model with 2 auxiliary outputs	SPST-NO, 250 VAC, 3 A
4	Model with 4 auxiliary outputs	SPST-NO, 250 VAC, 2 A

● Terminal Details

Do not connect anything to the terminals that are shaded gray.

Model with 2 auxiliary outputs	Model with 4 auxiliary outputs

*   Common terminals are indicated with asterisks (*).

Input Power Supply

● Model Numbers

The input power supply specification is given in the following location in the model number.

E5EC-□□ □ □ S M-□□□

└── Input power supply

The codes that are given in the following table show the specification.

Code	Specification	Power consumption	
		Options No.: 000	Options No.: Not 000
A	100 to 240 VAC, 50/60 Hz	6.6 VA max.	8.3 VA max.
D	24 VAC, 50/60 Hz	4.1 VA max.	5.5 VA max.
	24 VDC (no polarity)	2.3 W max.	3.2 W max.

● Terminal Details
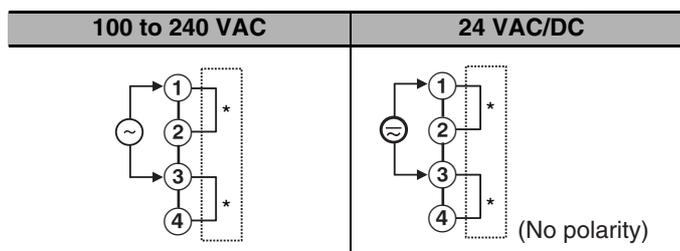

Details on the input power supply terminals are shown below.

100 to 240 VAC	24 VAC/DC

(No polarity)

* Common terminals are indicated with asterisks (*). You can use them for crossover wiring.

For crossover wiring, do not exceed the maximum number of Digital Controllers given below.

100 to 240 VAC Controllers: 16 max.

24 VAC/VDC Controllers: 8 max.

Options

● Model Numbers

The options specification of the E5EC-B is given in the following location in the model number.

E5EC-□□ □ □ S M-□□□
Options

The polarity for a non-contact input is indicated by "(-)."

2-2-9   Precautions when Wiring

- Separate input leads and power lines in order to prevent external noise.
- Use crimp terminals when wiring the screw terminals.
- Use the suitable wiring material and crimp tools for crimp terminals.
- Tighten the terminal screws to a torque of 0.43 to 0.58 N·m. The specified torque is 0.5 N·m for the E5CC-U.

● E5CC, E5EC, E5AC, E5DC, and E5GC (Models with Screw Terminal Blocks) and E5CC-U (Plug-in Models)

Wires

Use the wire specifications given in the following table.

Model	Recommended wires	Stripping length
E5CC, E5EC, E5AC, E5DC, and E5GC	AWG24 to AWG18 (0.21 to 0.82 mm^2)	6 to 8 mm (when crimp terminals are not used)
E5CC-U	AWG24 to AWG14 (0.21 to 2.08 mm^2)	5 to 6 mm (when crimp terminals are not used)

Crimp Terminals

For the E5CC, E5EC, E5AC, E5DC, or E5GC, use the following types of crimp terminals for M3 screws.

5.8 mm max.

5.8 mm max.
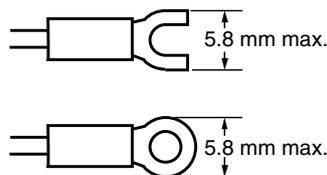

Although you can connect two crimp terminals with insulation sleeves to one terminal, you cannot do so if the diameter of the insulation sleeves is too large.
Select a crimp terminal that can be tightened as shown below. (Excluding the E5CC-U)

E5CC, E5EC, or E5AC

Note: Be careful in the tightening direction, as the terminal block is at an angle.
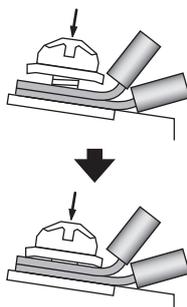

E5GC or E5DC
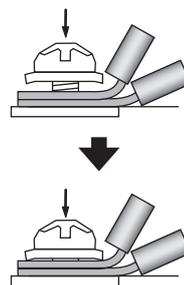

Some terminal blocks have a large crimp part. In this case, bend the terminal in advance as shown in the figure, and tighten slowly to ensure that the terminal screw is vertical to the terminal surface of the terminal block.

For the E5CC-U, use the following types of crimp terminals for M3.5 screws.

7.2 mm max

7.2 mm max
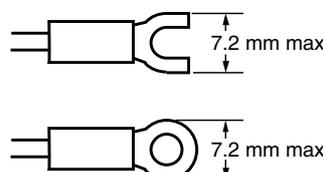

- If you use crimp terminals for the E5DC, use crimp terminals with insulation sleeves. If you use a bare crimp terminal with no insulation, the terminal may short with the terminal above or below it. If you use bare crimp terminals, cover the crimped sections with insulating marking tubes. Secure the marking tubes so that they do not move.

E5GC (Models with Screwless Clamp Terminal Blocks)

1. Connection Method for Screwless Clamp Terminal Blocks

The same method is used to connect stranded wires, solid wires, and ferrules.

● **Terminal Block Part Names**
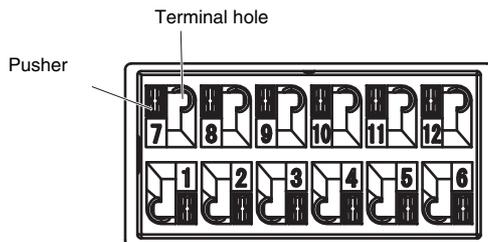

● **Connection Method**

(1)   Press the pusher with a flat-blade screwdriver.

(2)   With the screwdriver still pressing the pusher, insert the wire into the terminal hole.

(3)   Remove the flat-blade screwdriver from the pusher.
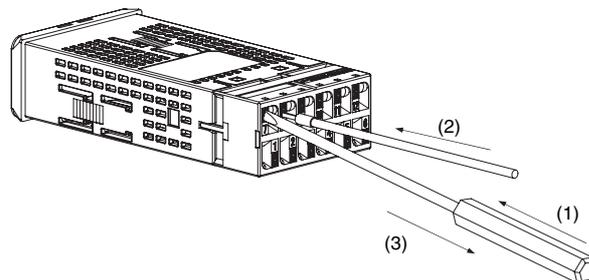

● **Checking Connections**

After insertion, pull gently on the wire to make sure that it will not come out (i.e., to confirm that it is held by the terminal block).
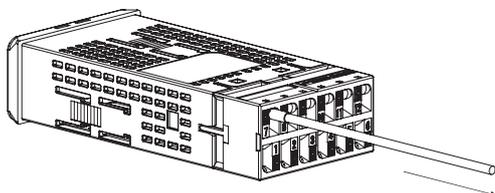

2. Removal Method for Screwless Clamp Terminal Blocks

The same method is used to remove stranded wires, solid wires, and ferrules.

(1)   Press the pusher with a flat-blade screwdriver.

(2)   With the screwdriver still pressing the pusher, pull the wire out of the terminal hole.

(3)   Remove the flat-blade screwdriver from the pusher.
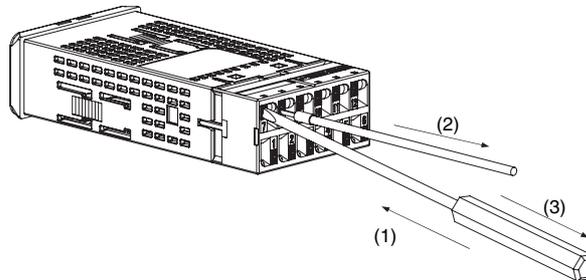

3. Recommended Wires and Ferrules

● Wires

Use the wire specifications given in the following table.

Recommended wire	Stripping length
AWG24 to AWG18 (0.21 to 0.82 mm^2)	8 to 12 mm

● Ferrules

Ferrules must be 0.8 to 1.4 mm in diameter

The length of the conductive portion inserted into the terminal must be 8 to 12 mm..

0.8 to 1.4 mm

8 to 12 mm

Wiring Example* or *2-2-8 E5GC Terminal Block Wiring Example* for the terminal arrangement.

● **Control Outputs 1 and 2**

The following diagrams show the applicable outputs and their internal equivalent circuits.

E5CC

RX (relay output)	QX (voltage output (for driving SSR))	CX (linear current output)	QQ (2 voltage outputs (for driving SSRs))	CQ (linear current and voltage output (for driving SSR))

Code	Output type	Specification
RX	Relay output	SPST-NO, 250 VAC, 3 A (resistive load), Electrical life: 100,000 operations
QX	Voltage output (for driving SSR)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CX	Linear current output	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000
QQ*	2 voltage outputs (for driving SSRs)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CQ*	Linear current output (control output 1)	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000
	Voltage output (for driving SSR) (control output 2)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)

* Control output 1 and control output 2 are not isolated.

E5CC-U

RW (relay, SPDT)	QX (voltage output (for driving SSR))	CX (linear current)

Code	Output type	Specification
RW	Relay (SPDT)	SPDT, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations
QX	Voltage (for driving SSR)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CX	Linear current	4 to 20 mA DC or 0 to 20 mA DC with load of 500 Ω max. Resolution: Approx. 10,000

E5CC-B

RX (relay)	QX (voltage output (for driving SSR))	CX (linear current output)
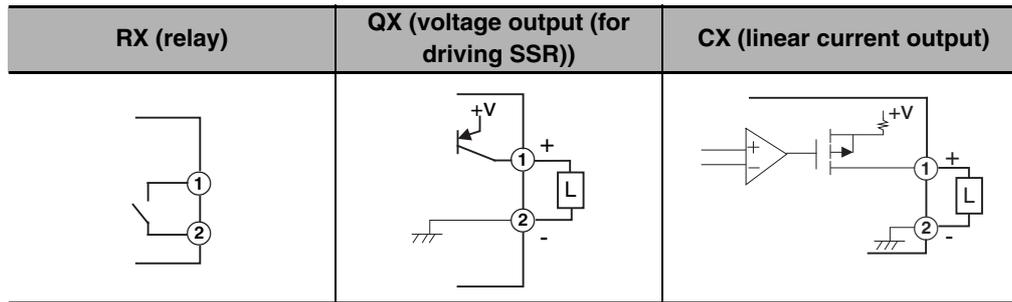

Code	Output type	Specification
RX	Relay	SPST-NO, 250 VAC, 3 A (resistive load), Electrical durability: 100,000 operations
QX	Voltage output (for driving SSR)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CX	Llinear current output	4 to 20 mA DC or 0 to 20 mA DC with load of 500 Ω max., Resolution: 10,000

E5EC/E5AC
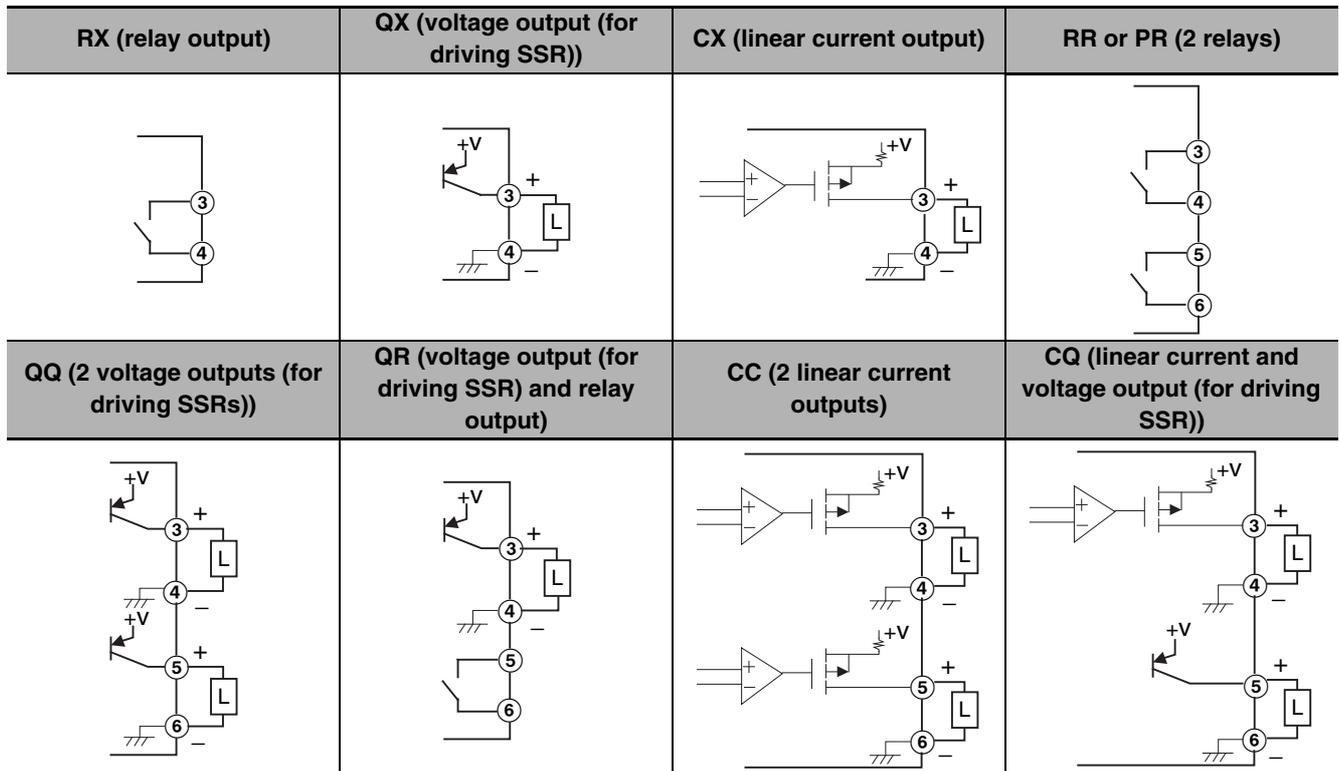

RX (relay output)	QX (voltage output (for driving SSR))	CX (linear current output)	RR or PR (2 relays)
QQ (2 voltage outputs (for driving SSRs))	**QR (voltage output (for driving SSR) and relay output)**	**CC (2 linear current outputs)**	**CQ (linear current and voltage output (for driving SSR))**

Code	Output type	Specification
RX	Relay output	SPST-NO, 250 VAC, 5 A (resistive load), Electrical life: 100,000 operations
QX	Voltage output (for driving SSR)	PNP, 12 VDC ±20%, 40 mA (with short-circuit protection)
CX	Linear current output	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000
RR or PR	2 relay outputs	SPST-NO, 250 VAC, 5 A (resistive load), Electrical life: 100,000 operations
QQ*	2 voltage outputs (for driving SSRs)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)

Code	Output type	Specification
QR	Voltage output (for driving SSRs) (control output 1)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
	Relay output (control output 2)	SPST-NO, 250 VAC, 5 A (resistive load), Electrical life: 100,000 operations
CC*	2 linear current outputs	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000
CQ*	Linear current output (control output 1)	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000
	Voltage output (for driving SSR) (control output 2)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)

*   Control output 1 and control output 2 are not isolated.

E5EC-B

RX (relay)	QX (voltage output (for driving SSR))	CX (linear current)

Code	Output type	Specification
RX	Relay output	SPST-NO, 250 VAC, 5 A (resistive load), Electrical durability: 100,000 operations
QX	Voltage output (for driving SSR)	PNP, 12 VDC ±20%, 40 mA (with short-circuit protection)
CX	Linear current output	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000

E5DC

RX (relay output)	QX (voltage output (for driving SSR))	CX (linear current output)

Code	Output type	Specification
RX	Relay output	SPST-NO, 250 VAC, 3 A (resistive load), Electrical life: 100,000 operations
QX	Voltage output (for driving SSR)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CX	Linear current output	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000

E5DC-B

RX (relay output)	QX (voltage output (for driving SSR))	CX (linear current output)

Code	Output type	Specification
RX	Relay output	SPST-NO, 250 VAC, 3 A (resistive load), Electrical life: 100,000 operations
QX	Voltage output (for driving SSR)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CX	Linear current output	4 to 20 or 0 to 20 mA DC, Load: 500 Ω max., Resolution: Approx. 10,000

E5GC

RX (relay output)	QX (voltage output (for driving SSR))	CX (linear current)

Code	Output type	Specification
RX	Relay	SPST-NO, 250 VAC, 2 A (resistive load), Electrical durability: 100,000 operations
QX	Voltage (for driving SSR)	PNP, 12 VDC ±20%, 21 mA (with short-circuit protection)
CX	Linear current	4 to 20 mA DC or 0 to 20 mA DC with load of 500 Ω max. Resolution: Approx. 10,000

● Auxiliary Outputs 1 to 4

- If heating/cooling control is selected for the E5CC, E5CC-U, E5CC-B, E5DC or E5DC-B when there is only one control output, the auxiliary output 2 terminal is assigned as the control output for cooling. (If the Digital Controller has only one auxiliary output, an output is not automatically allocated for the control output for cooling.)
- If heating/cooling control is selected for the E5EC, E5EC-B, or E5AC when there is only one control output, the auxiliary output 4 terminal is assigned as the control output for cooling. (If the Digital Controller has only two auxiliary outputs, auxiliary output 2 is allocated as the control output for cooling.)
- When heating/cooling control is selected for the E5GC, auxiliary output 1 is assigned as the control output for cooling.

● **Event Inputs**

Models with an option number of 001, 004 to 014, 016, 017, or 024 have one or more event inputs.

E5CC

Contact inputs	Non-contact inputs
Option number: 001, 006, or 007	

Contact inputs	Non-contact inputs
Option number: 004	
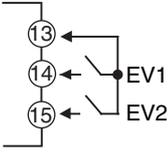

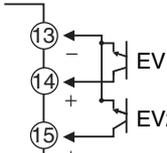

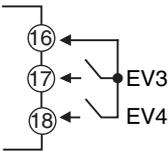

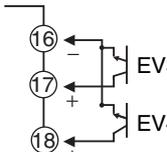

Contact inputs	Non-contact inputs
Option number: 005	
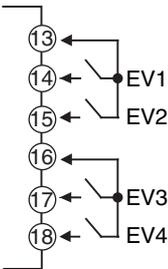

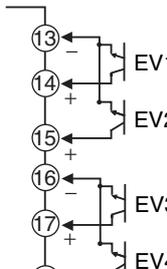

E5CC-B

Contact inputs	Non-contact inputs
Option number: 001 or 006	
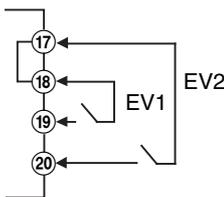

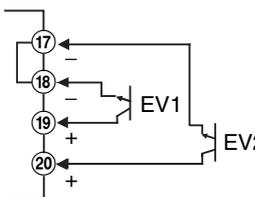

Contact inputs	Non-contact inputs

E5EC/E5AC

Contact inputs	Non-contact inputs
Option number: 004, 008 or 009	
Option number: 005 or 010	
Option number: 011 or 013	
Option number: 012 or 014	
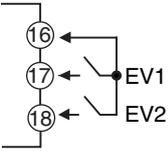

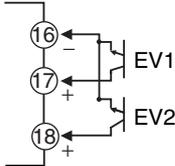

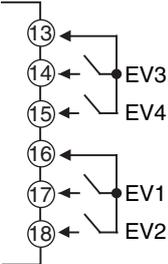

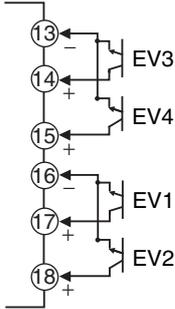

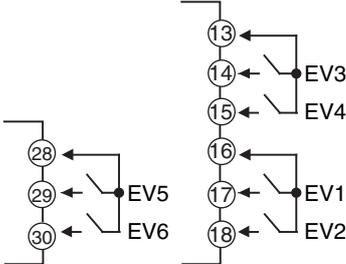

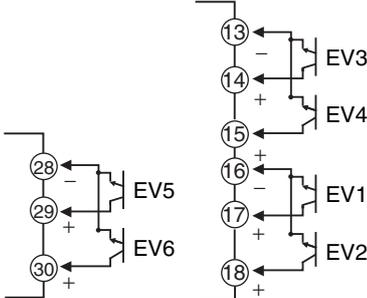

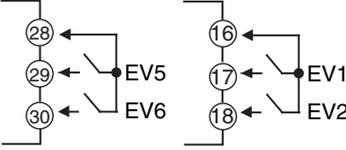

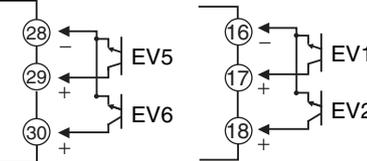

E5EC-B

Contact inputs	Non-contact inputs
Option number: 004 or 008	
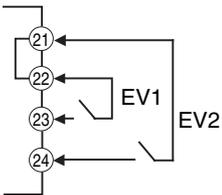

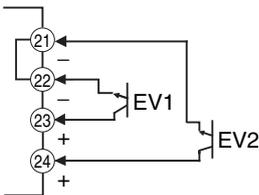

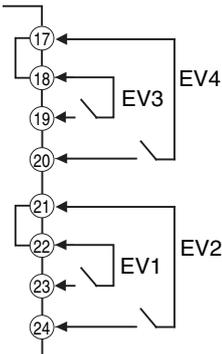

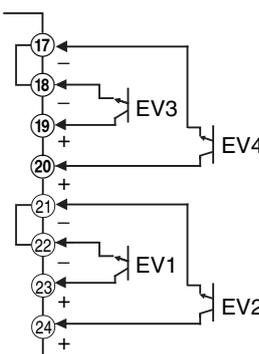

| Option number: 010 |

| Option number: 011 |

| Option number: 014 |
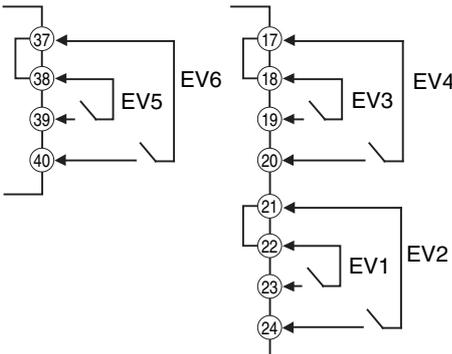

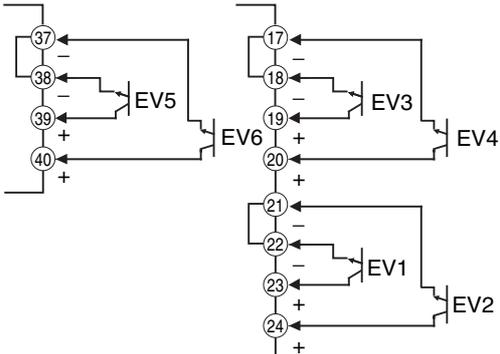

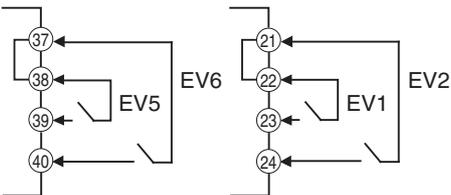

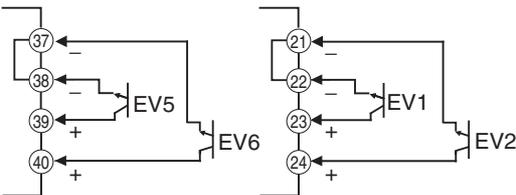

E5DC

Contact inputs	Non-contact inputs
Option number: 016 or 017	
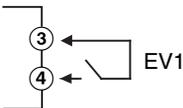

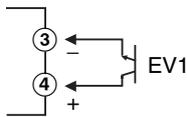

E5DC-B

There are no event inputs.

E5GC

Contact inputs	Non-contact inputs
Option number: 016	
7 ← / EV1 8 ←	7 ← − EV1 8 ← +
Option number: 024	
7 ← / EV1 8 ← • 9 ← / EV2	7 ← − EV1 8 ← + EV2 9 ← +

- Use non-voltage inputs for the event inputs.
- Use event inputs under the following conditions:
  The outflow current is approximately 7 mA.

Contact input ON: 1 kΩ max., OFF: 100 kΩ min.
No-contact input ON: Residual voltage of 1.5 V max.; OFF: Leakage current of 0.1 mA max.

Note: The E5CC-U does not have event inputs.

● CT Inputs

Models with an option number of 001 to 003, 008 to 012, 017, or 023 have one or more CT inputs.
Note: The E5CC-U does not have CT inputs.

● Transfer Output

Models with an option number of 006 or 011 to 014 have a transfer output.

E5CC

Option number: 006
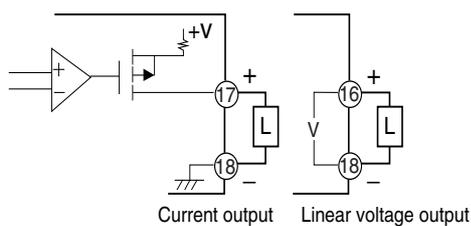

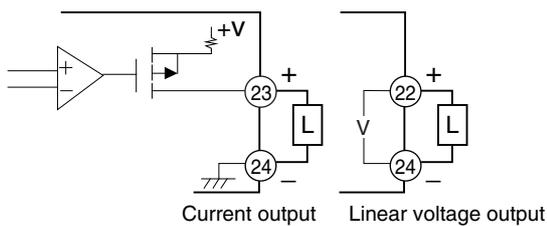

+V

17 + L 18 −   16 + L 18 −

Current output   Linear voltage output

E5CC-B

Option number: 006

+V

23 + L 24 −   22 + L 24 −

Current output   Linear voltage output

E5EC/E5AC

Option number: 011, 012, 013, or 014

Current output   Linear voltage output

E5EC-B

Option number: 011 or 014
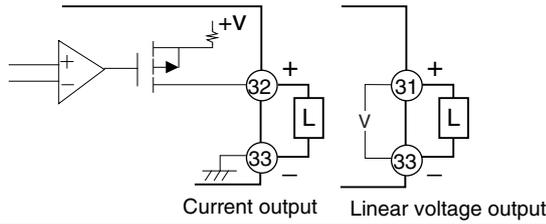

Current output   Linear voltage output
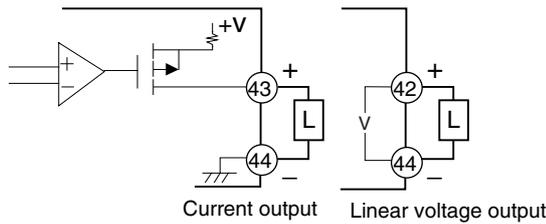

Output type	Specification
Current output	4 to 20 mA DC, Load: 500 Ω max., Resolution: 10,000
Linear voltage output	1 to 5 VDC, Load: 1 kΩ min., Resolution: 10,000

Note: The E5CC-U, E5DC, E5DC-B, and E5GC do not have a transfer output. However, if the control output is a linear current output, the control output can be used as a simple transfer output. For details on the operating procedure, refer to *5-13 Using the Transfer Output for the Process Value, Set Point, or other Data*.

* The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).

● **Remote SP Input**

Models with an option number of 007 or 011 to 014 have a remote SP input.

Input type	Specification
Current input	4 to 20 or 0 to 20 mA DC with input impedance of 150 Ω max.
Linear voltage input	1 to 5, 0 to 5, or 0 to 10 VDC with input impedance of 1 MΩ min.

Note: The E5CC-U, E5CC-B, E5DC, E5DC-B, and E5GC do not have a remote SP input.

The remote SP input circuit is not electrically isolated from the internal circuits. Therefore, when using a grounded sensor input, do not connect the remote SP input terminals to ground. (If the remote SP input terminals are connected to ground, errors will occur in the measured temperature as a result of leakage current.)

● **Potentiometer Input**

You can use this input for a Position-proportional Model. The maximum opening can be measured to between 100 and 10KΩ.
Note: The E5CC, E5CC-U, E5CC-B, E5EC-B, E5DC, E5DC-B, and E5GC do not have a potentiometer input.

● **Communications**

RS-485

Models with an option number of 002 to 004, 008, 009, 012, 014, or 015 support RS-485 communications.
To use communications with the E5CC, E5AC, or E5EC, connect the communications cable to terminals 13 and 14, with the E5CC-B or E5EC-B, to terminals 17 or 18 and 19 or 20, with the E5DC, to terminals 3 and 4, with the E5DC-B, to terminals 5 and 6, and with the E5GC, to terminals 7 and 8.

Communications Unit Connection Diagram

E5CC/E5EC/E5AC
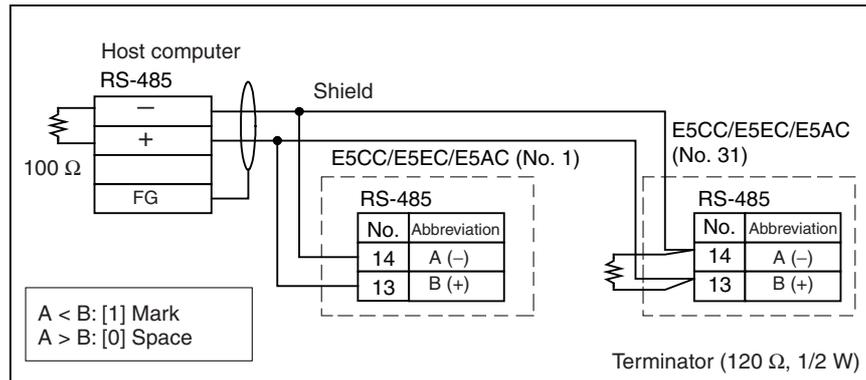

E5CC-B/EC-B
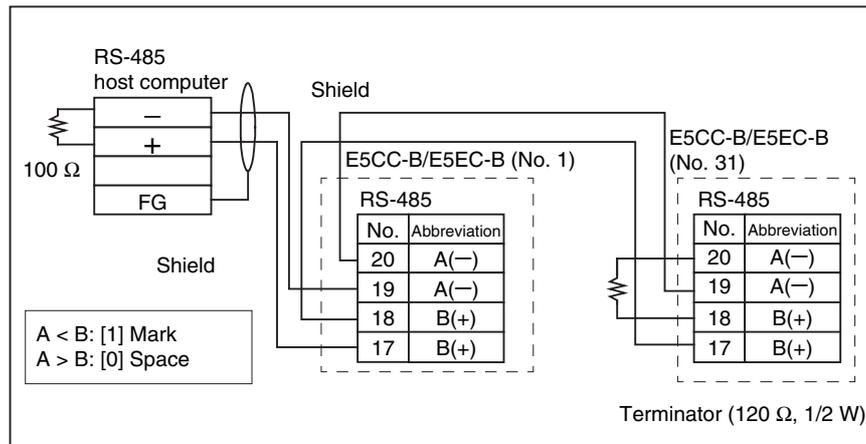

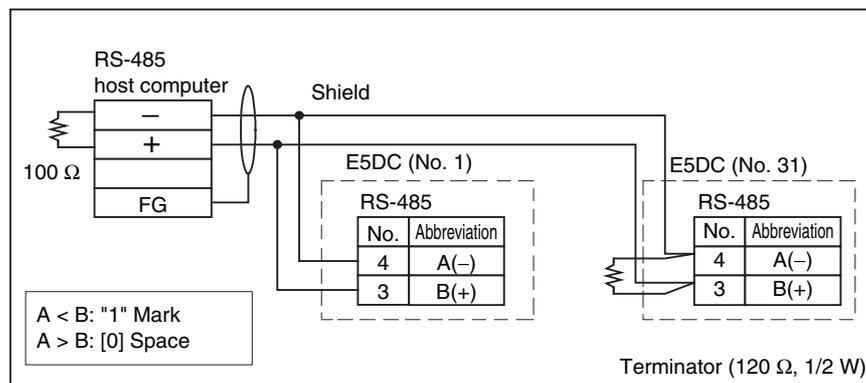

E5DC

E5DC-B
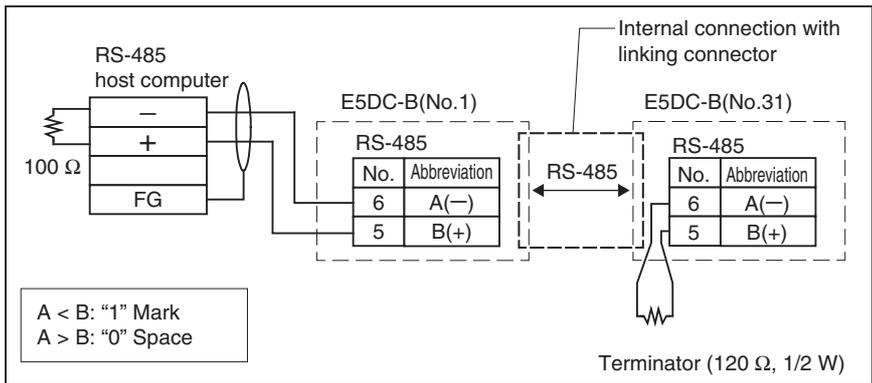

E5GC
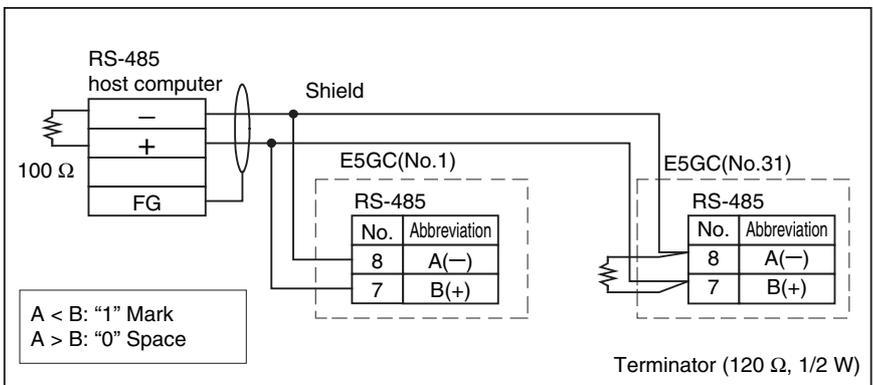

- The RS-485 connection can be either one-to-one or one-to-N. A maximum of 32 Units (including the host computer) can be connected in one-to-N systems.
  The maximum total cable length is 500 m. Use shielded twisted-pair cable.

Cross-sectional area of conductor
(For details, refer to *2-2-9 Precautions when Wiring.*)
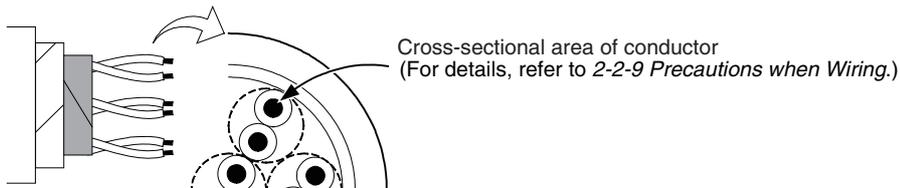

Note: The E5CC-U does not support communications.

● Connecting Short Bars

On the E5DC, you can use a Y92S-P11 Short Bar to connect the power supply or communications.
Connect the Short Bar to the power supply screw terminals or the screw terminals for communications.
- Short Bar (sold separately)
  Y92S-P11
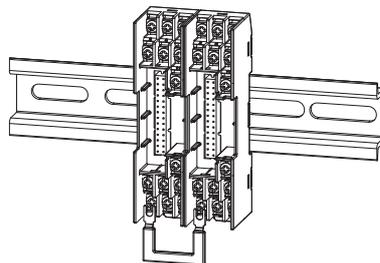

2-3　Insulation Block Diagrams

The insulation block diagrams are provided in this section.

2-4   Using the Setup Tool Port 000

Use one of the Setup Tool ports to connect the computer to the Digital Controller when using the CX-Thermo (EST2-2C-MV4 or later) or other Support Software.

The E58-CIFQ2 USB-Serial Conversion Cable[1] is required for the connection. For information on the models that can be used with CX-Thermo, contact your OMRON sales representative.

*1   The E58-CIFQ2-E is required to connect to the Setup Tool port on the front panel of the E5EC, E5EC-B, E5AC, E5DC, or E5DC-B, or to connect to the Setup Tool port on the bottom panel of the E5GC.

2-4-1   Procedure

When the USB-Serial Conversion Cable is connected to the Digital Controller, the following operations are possible even if the power supply to the Digital Controller is not turned ON.
- Setting up the Digital Controller from a computer (Special software is required.)
- Changing settings by using key operations on the Digital Controller
- Displaying the current temperature on the Digital Controller

The control outputs, alarm outputs, transfer output, event inputs, and external communications for the Digital Controller will not operate unless the power supply to the Digital Controller is turned ON.

2-4-2   Connection Method

Use the E58-CIFQ2 USB-Serial Conversion Cable to connect the E5□C to the computer. The USB-Serial Conversion Cable is used to communicate with a USB port on a computer as a virtual COM port.

E5CC/E5CC-B/E5CC-U

● Setup Tool Port and Connecting Cable

The location of the Setup Tool port on the E5CC, E5CC-B, or E5CC-U and the required cable are shown below.

Setup Tool port	Connecting cable
• Top panel on the Digital Controller Top-panel Setup Tool port	E58-CIFQ2 USB-Serial Conversion Cable
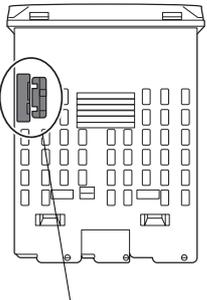

● **Connection Procedure**

1 Connect the serial connector on the USB-Serial Conversion Cable to the Setup Tool port on the top panel of the Digital Controller.

Serial connector
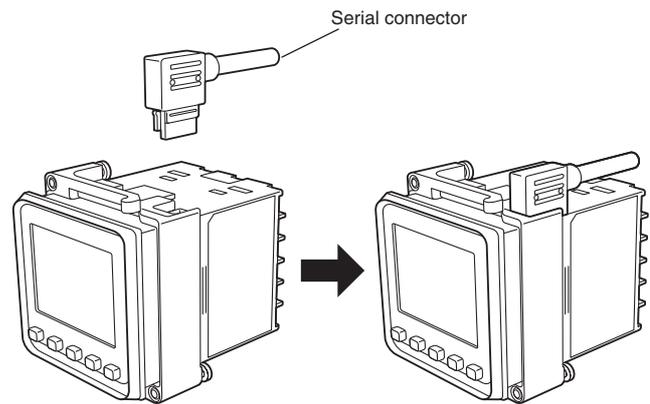

E5EC/E5EC-B/E5AC

● **Setup Tool Ports and Connecting Cables**

The location of the Setup Tool port on the E5EC, E5EC-B, or E5AC and the required cable are shown below. There are Setup Tool ports on both the top panel and front panel of the Digital Controller.

2 **Connect the plug on the Conversion Cable to the bottom-panel Setup Tool port.**

Conversion cable
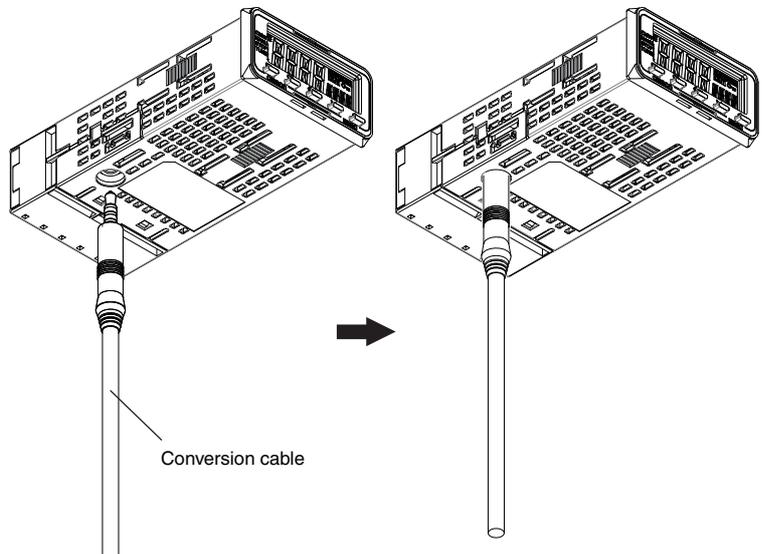

![icon] **Precautions for Correct Use**

• Hold the connector when inserting or disconnecting the Cable.
• When connecting a connector, always make sure that it is oriented correctly. Do not force the connector if it does not connect smoothly. Connectors may be damaged if they are connected with excessive force.
• Do not connect cables to both ports at the same time. Damage or malfunction may occur.

2-4-3 Installing the Driver

1. Connect a USB connector on the computer with a Setup Tool port on the Digital Controller using the Cable or Cables.

2. Obtaining the Driver

When the CX-Thermo Support Software for the Digital Controller is installed, the driver for the USB-Serial Conversion Cable will be copied to the following folder.

C:\Program Files\OMRON\Drivers\USB\E58-CIF

3. Installing the Driver

Install the driver to enable the Cable to be used with the personal computer.

• Installation

When the Cable is connected with the personal computer, the OS will detect the product as a new device. At this time, install the driver using the Installation Wizard.

Note1: We recommend that you install the driver for each USB port on the computer at the start. The Digital Controller assigns a COM port number to each USB port on the computer. If the same USB port is used, you will be able to use the same COM port number even if you use a different Cable.

2: Installation of the driver will not be completed if the installation is canceled before it is completed. Normal communications will not be possible unless the driver is installed completely. If the driver is not installed completely, uninstall it, and then install it correctly.

4. Setting Setup Tool Communications Conditions

Set the communications port (COM port) number to be used for the CX-Thermo Setup Tool to the COM port number assigned to the USB-Serial Conversion Cable.

Refer to the E58-CIFQ2 USB-Serial Conversion Cable Instruction Manual and Setup Manual for details on how to check the COM port assigned to the USB-Serial Conversion Cable.

The communications conditions for Setup Tool COM ports are fixed as shown in the table below. Set the communications conditions for the CX-Thermo Setup Tool according to the following table

Parameter	Set value
Communications Unit No.	01
Communications baud rate	38.4 (kbps)
Communications data length	7 (bits)
Communications stop bits	2 (bits)
Communications parity	Even

ON/OFF Control   PID Control

| Set the control hysteresis. | | Set the control periods* and PID constants. |

*For time-proportional operation.

| Operate with the set values. |
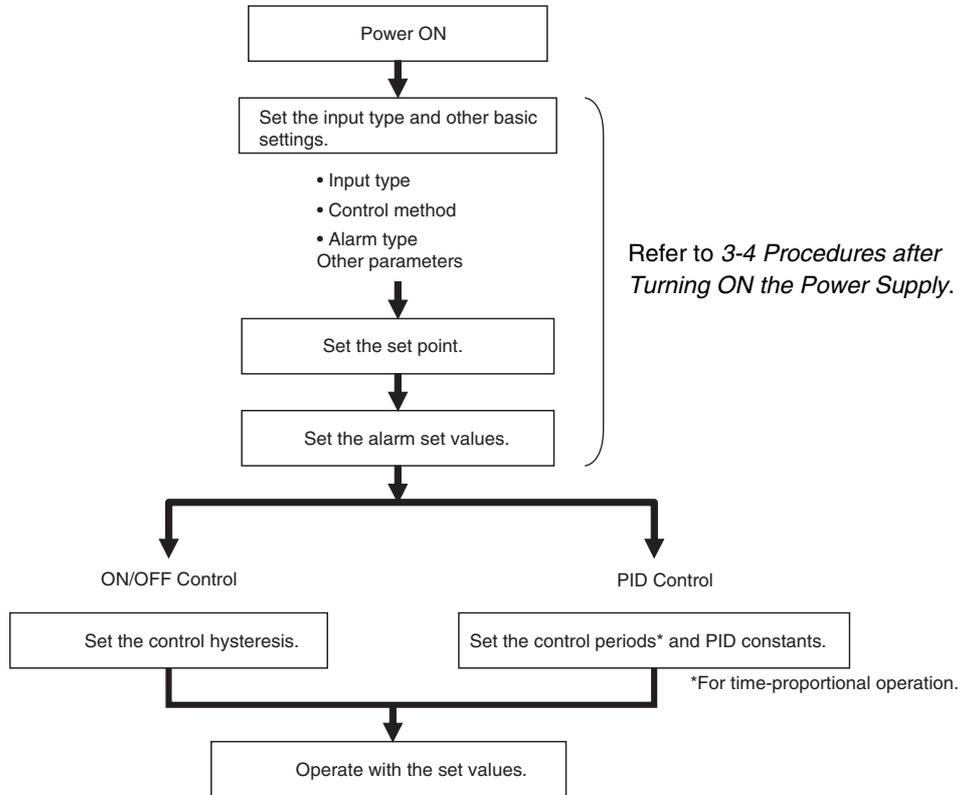

3-2   Power ON

Operation will start as soon as you turn ON the power supply to the E5☐C.
The following default settings will be used when operation starts.

Standard Models

- Input type 5:
  K thermocouple
- ON/OFF control [*1]
- Alarm: Upper-limit alarm[*2]
- Set point: 0°C

*1   The default setting for Position-proportional Models is floating control operation.

*2   If the Controller is equipped with HB/HS alarm detection, the default setting for the Auxiliary Output 1 Assignment is for heater alarms. Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To enable alarm 1, set an output assignment to alarm 1.

After the power comes ON, all indicators and displays will light for approximately 1 second, and then the operation display will appear.
The top display will show the PV and the bottom display will show the SP.

Power ON

Everything lights for approx. 1 s.

Operation Level   The operation display appears.

The default setting of the input type is for a K thermocouple.

• Resistance Thermometer Connected
  or
• Temperature Sensor Not Connected

S.ERR:
An input error is displayed.

• Thermocouple Connected

The PV that is measured by the temperature sensor is displayed.

K Thermocouple Connected:
  The correct temperature is displayed.
Other Thermocouple Connected:
  The correct temperature is not displayed.
SP
*The default setting is 0°C.

• Change the setting of the Input Type parameter to a resistance thermometer in the Initial Setting Level.
Or
• Connect a temperature sensor.
Refer to step 2 on 3-13.

If you are not using a K thermocouple, set the Input Type parameter to the correct sensor type in the Initial Setting Level.
Refer to step 2 on 3-13.

SP or specified parameter value

Bottom View of E5DC

Press ▭ Key once to go to Adjustment Level.

Press ▭ Key for at least 3 seconds to go to Initial Setting Level.

Press the ⟳ Key to change to another parameter.

Press the ⏶ ⏷ Keys to set the parameter.

Bottom-panel Setup Tool port

Press ⟪PF Key to change the digit (default setting).

Front-panel Setup Tool port

E5GC

| Front panel | | Left Side View of the E5GC |

- Temperature unit
- Operation indicators
- No. 1 display — PV or specified parameter
- No.2 display — SP or specified parameter value
- Left-panel Setup Tool port
- Bottom View of E5GC
- Bottom-panel Setup Tool port

Press ◯ Key once to go to Adjustment Level.

Press ◯ Key for at least 3 seconds to go to Initial Setting Level.

Use ⊛ ⊛ Keys to set the parameter.

Use ⊙ Key to change to another parameter.

Use (PF) Key to change the digit (default setting).

Displays

Name	Description
No. 1 display	Displays the process value or a monitor/setting item.
No. 2 display	Displays the set point or the value of a monitor/setting item.
No. 3 Display (E5EC, E5EC-B, and E5AC Only)	Displays the manipulated variable (valve opening), remaining soak time, multi-SP No., internal SP (ramp SP), or alarm value 1. (The value that is displayed is set in the PV/SP Display Selection parameter in the Advanced Function Setting Level.)
Temperature unit* (Not provided on the E5DC and E5DC-B.)	Displays the temperature unit (℃ or ℉).

* You can use the Y92S-L2 Unit Labels (sold separately) with the E5DC/E5DC-B.

Indicators

Operation indicators	Name	Description
SUB1 SUB2 SUB3 SUB4	Auxiliary outputs 1 to 4 (Only the E5CC, E5EC, E5EC-B, and E5AC support auxiliary output 3.) (Only the E5EC, E5EC-B, and E5AC support auxiliary output 4.)	Each indicator lights when the function that is assigned to corresponding auxiliary output (1 to 4) is ON.
OUT1 OUT2	Control outputs 1 and 2 (Control output 1: E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, or E5AC only) (Control output 2: E5CC, E5EC, or E5AC only)	Each indicator lights when the function that is assigned to corresponding control output (1 or 2) is ON. (For a linear current output, the indicator is not lit for values below 0%.) For a Position-proportional Model, OUT1 lights when the open output is ON and OUT2 lights when the close output is ON.
OUT	Control output (E5DC, E5DC-B, or E5GC only)	Each indicator lights when the function that is assigned to corresponding control output is ON. (For a linear current output, the indicator is not lit for values below 0%.)
CMW	Communications writing	This indicator lights when wiring with communications is enabled.

Operation indicators	Name	Description
MANU	Manual	This indicator is lit in Manual Mode.
STOP	Stop	This indicator is lit while operation is stopped.
TUNE	AT/ST in progress	This indicator is lit during autotuning. This indicator flashes during self-tuning.
RSP	Remote SP (E5CC, E5EC, E5EC-B, or E5AC)	This indicator is lit while the SP Mode parameter is set to Remote SP Mode. This indicator flashes when there is an RSP input error in Remote SP Mode.
O⊓	Setting change protection	This indicator is lit while setting change protection is ON.

Keys

Key	Name	Overview	Description

▭	Level Key	Selects the setting level.
		
		The next setting level depends on how long the key is pressed.
			• In Operation Level
			  • Press once for less than 1 second to go to Adjustment Level.
			  • Press for at least 3 seconds to go to Initial Setting Level.
			• In Adjustment Level
			  • Press once for less than 1 second to go to Operation Level.
			  • Press for at least 3 seconds to go to Initial Setting Level.
			• In Initial Setting Level
			  • Press for at least 1 second to go to Operation Level.

↻	Mode Key	Changes the parameter that is displayed within a setting level.	• Press once to go to the next parameter. • Hold to go to the previous parameter.

⌄
 	
⌃
	Down Key and Up Key	Set the value.	• Hold the key to increment or decrement the value quickly.
			• Any changes in settings are applied at the following times:
			  • After 3 seconds elapse
			  • When the ↻ Key is pressed
			  • When the level is changed with the ▭ Key

Key	Name	Overview	Description
《PF	Shift Key (PF Key)	Operates as a user-defined function key.	• Press the 《PF Key for less than 1 second to select the digit to change. The key operates as a Shift Key to change the digit by one digit every time you press the key (default setting). • You can change the PF Setting parameter in the Advanced Setting Level to assign any of the following functions to the 《PF Key. Run/stop, auto/manual, autotune, cancel alarm latch, display monitor/setting item, or digit shift (default) Example: If you set the PF Setting parameter in the Advanced Setting Level to 5ťōP, operation will be stopped when you press the 《PF Key for 1 second or longer. • If you set PFdF (monitor/setting items), each time you press the 《PF Key for less than 1 second, the display is changed in order for the items that are set for the Monitor/Setting Item 1 to 5 parameters.

Setup Tool Ports 000

Setup Tool port	Name	Description
	Setup Tool port (card edge type)	Use the E58-CIFQ2 USB-Serial Conversion Cable to connect the E5☐C to the computer (i.e., the CX-Thermo Support Software). E5CC, E5CC-B, E5EC, E5EC-B, or E5AC: On top panel E5DC or E5DC-B: On bottom panel E5GC: On left side panel
	Setup Tool port (pin jack)	Use the E58-CIFQ2 USB-Serial Conversion Cable and the E58-CIFQ2-E Conversion Cable to connect the E5EC, E5EC-B, or E5AC to the computer (i.e., the CX-Thermo Support Software). E5EC, E5EC-B, or E5AC: On front panel
	Setup Tool port (pin jack)	Use the E58-CIFQ2 USB-Serial Conversion Cable and the E58-CIFQ2-E Conversion Cable to connect the E5DC or E5GC to the computer (i.e., the CX-Thermo Support Software). E5DC or E5DC-B: On front panel E5GC: On bottom panel

3-3-2 Entering Numeric Values

Applying Changes to Numeric Values

After you change a numeric value with the ⊗ ⊗ Keys, the changes are applied 1) when 3 seconds elapses, 2) when the ⊖ Key is pressed, or 3) when the level is changed with the ⊖ Key.

✍ Precautions for Correct Use

Always make sure that any changes to numeric values are applied for one of the three methods that are given above before you turn OFF the power supply to the E5□C.
If you only change the values with the ⊗ ⊗ Keys and turn OFF the power supply before 3 seconds has elapsed, the changes will not be applied.

Moving between Digits (Digit Shift Key)

Press the Shift Key (PF Key) to select the digit to change.
This is useful when entering a numeric value with many digits.
Use this key to change levels: The digit to change will move as follows: 1s digit, 10s digit, 100s digit, 1000s digit, and then back to the 1s digit. Press the ⊗ + ⊗ Keys to change the value of a digit.
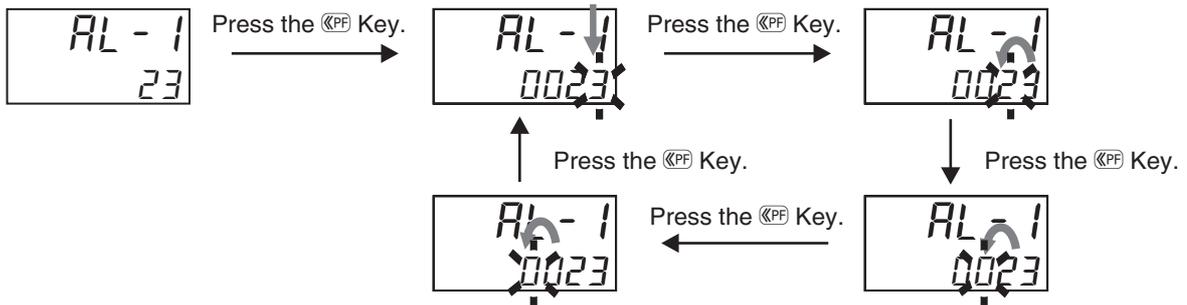

3-3-3   Setting Levels

On the E5□C, the parameters are classified into levels according to their applications. These levels are called setting levels. The setting levels consist of some basic setting levels and other setting levels.

Moving between Setting Levels

The following figure gives an overall image of the setting levels. The setting levels consist of the basic setting levels (shaded below) and the other setting levels (not shaded).

The Initial Setting Level, Communications Setting Level, Advanced Function Setting Level, and Calibration Level can be used only when control is stopped. If you change to any of these levels, control will stop.
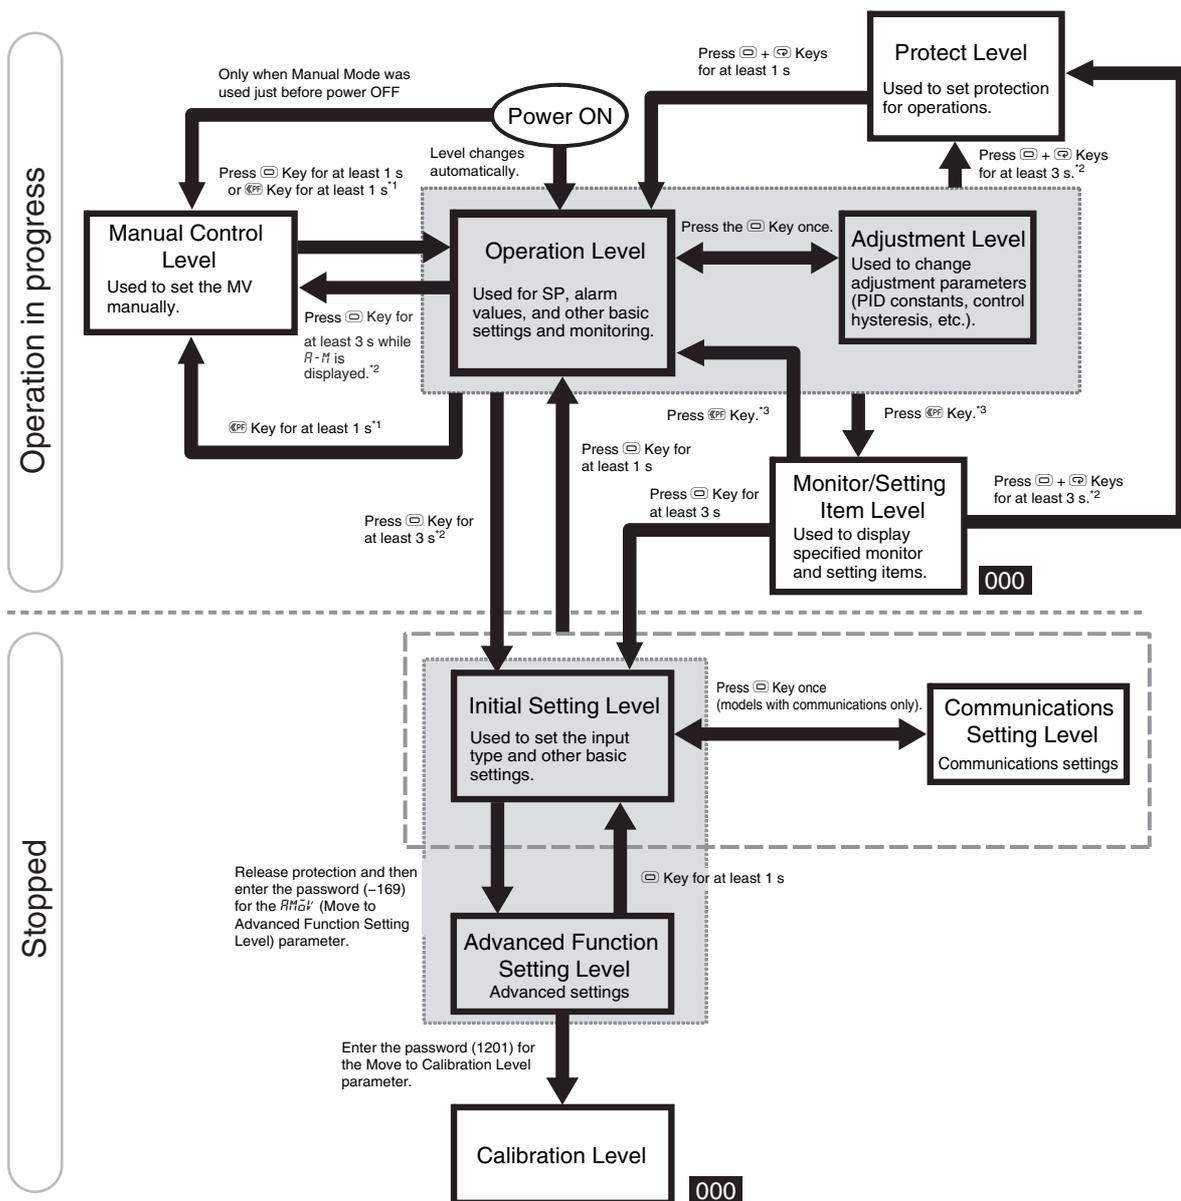

*1   Set the Auto/Manual Select Addition parameter to ON and set the PF Setting parameter to A-M (Auto/Manual).

*2   The No. 1 display will flash when the keys are pressed for 1 s or longer.

*3   Set the PF Setting parameter to PF-dP (monitor/setting items).

Basic Setting Levels

● Operation Level

This level is displayed automatically when the power supply is turned ON.

This level is used for the SP, alarm values, and other basic settings and monitoring.

Normally, select this level for operation.

● Adjustment Level

This level is used to set the PID constants and to perform tuning, such as autotuning.

In Adjustment Level, the settings of the parameters can be changed during operation. This is not possible in the Initial Setting Level or Advanced Function Setting Level.

● Initial Setting Level

This level is used for the most basic settings.

It is used to set the input type and other parameters.

Use it to set the input type, alarm type, and other basic settings.

● Advanced Function Setting Level

This level is used for advanced settings.

Use it to assign functions to the control outputs and auxiliary outputs.

You will not be able to enter the Advanced Function Setting Level with the default settings.

To enter the Advanced Function Setting Level, first disable Initial Setting/Communications Protection and then enter the password (−169) at the $RM\bar{o}V$ (Move to Advanced Function Setting Level) parameter in the Initial Setting Level.

Use the following procedure to move to Advanced Function Setting Level.
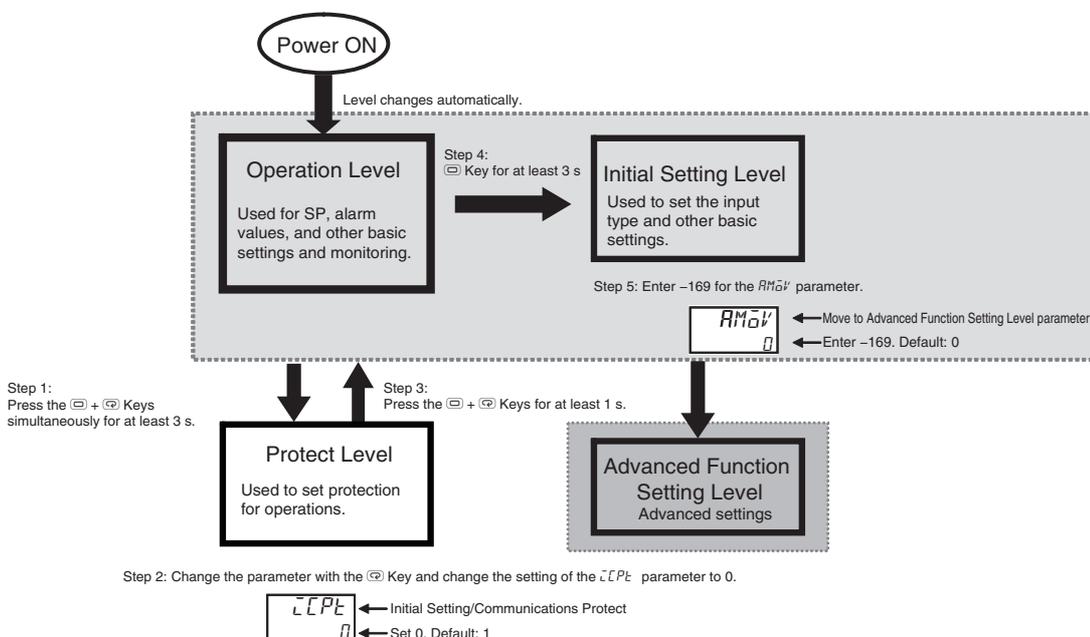

Step 1:   Move to Protect Level.

Step 2:   Display $\bar{\iota}CPt$ (Initial Setting/Communications Protect) and set it to 0.

Step 3:   Return to Operation Level.

Step 4:   Return to Initial Setting Level.

Step 5:   Display $RM\bar{o}V$ (Move to Advanced Function Setting Level) and then enter −169.

Steps 1 to 3 are necessary only the first time. Perform only steps 4 and 5 to move to Advanced Function Setting Level.

Other Setting Levels

There are five other setting levels: Manual Control Level, Protect Level, Communications Setting Level, Calibration Level, and Monitor/Setting Item Level.

● **Manual Control Level**

This level is used to set the MV manually. With the default settings, you cannot move to the Manual Control Level.

- To use the ⒆ Key to move to the Manual Control Level, change the setting of the PF Setting parameter to A-M.
- To use the Level Key on the Auto/Manual Switch Display to move to the Manual Control Level, set the Auto/Manual Switch Display Addition parameter in the Advanced Function Setting Level to ON.
- To use an event input to move to the Manual Control Level, change the setting of the Event Input Assignment 1 to 6 parameter to $MANU$.

● **Protect Level**

This level is used to restrict the operations that can be performed and the parameters that can be displayed with the front-panel keys. For example, you can prohibit changing the SP and other parameters in the Operation Level and Adjustment Level. You can move to the Protect Level from the Operation Level or the Adjustment Level. To move to the Advanced Function Setting Level, you must first cancel the protection that is set in the Protect Level.

● **Communications Setting Level**

This level is used to set the communications parameters. You can move to the Communications Setting Level from the Initial Setting Level.

● **Calibration Level**

This level is used to calibrate the Digital Controller. You can move to the Calibration Level from the Advanced Function Setting Level.

● **Monitor/Setting Item Level**

To use the ⒆ Key to display the Monitor/Setting Items, change the setting of the PF Setting parameter to $PFdP$. The items that will be displayed in the Monitor/Setting Item Level are set using the Monitor/Setting Item 1 to 5 parameters.

3-4 Procedures after Turning ON the Power Supply

3-4-1 Basic Flow of Operations

The basic flow of operations after you turn ON the power supply is shown below.

1. Turn ON the power supply.

↓

2. Set the input type.

↓

3. Set the control method.

↓

4. Set the alarm type.

↓

5. Set the set point.

↓

6. Set the alarm set values.
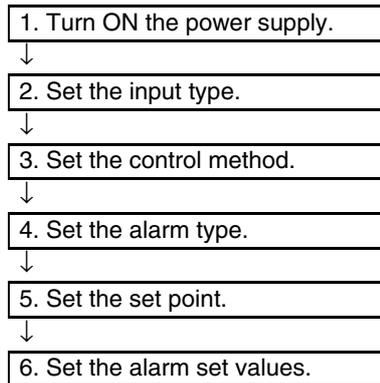

3-4-2 Basic Procedure

The basic procedure is given below.

1 **Turn ON the power supply.**

Operation Level

←𝟧.𝐸𝑅𝑅 (input error) flashes on the display if a sensor is not connected or if the connected sensor is different from input type. Connect a sensor if one is not already connected.

2 **Set the input type.**

Press the ▭ (Level) Key for at least 3 seconds.

←The display flashes.

Initial Setting Level

←𝐼𝑁-𝑡 (IN-T) will be displayed to show that the Initial Setting Level has been entered.

←The default setting is 𝟧 (5: K thermocouple at −200 to 1,300 °C).

Initial Setting Level

←𝐼𝑁-𝑡 (IN-T): Indicates the Input Type parameter.

←Input Type: 0 (Pt100 resistance thermometer at −200 to 850 °C) (example)

Press the ⌃ (Up) and ⌄ (Down) Keys to change the value.

When you are finished, press the ▭ (Level) Key for at least 1 second to return to the operation display.

List of Input Types

Input type	Specifications	Set value	Temperature range in °C	Temperature range in °F
Resistance thermometer	Pt100	0	−200 to 850	−300 to 1500
		1	−199.9 to 500.0	−199.9 to 900.0
		2	0.0 to 100.0	0.0 to 210.0
	JPt100	3	−199.9 to 500.0	−199.9 to 900.0
		4	0.0 to 100.0	0.0 to 210.0
Thermocouple	K	5	−200 to 1300	−300 to 2300
		6	−20.0 to 500.0	0.0 to 900.0
	J	7	−100 to 850	−100 to 1500
		8	−20.0 to 400.0	0.0 to 750.0
	T	9	−200 to 400	−300 to 700
		10	−199.9 to 400.0	−199.9 to 700.0
	E	11	−200 to 600	−300 to 1100
	L	12	−100 to 850	−100 to 1500
	U	13	−200 to 400	−300 to 700
		14	−199.9 to 400.0	−199.9 to 700.0
	N	15	−200 to 1300	−300 to 2300
	R	16	0 to 1700	0 to 3000
	S	17	0 to 1700	0 to 3000
	B	18	100 to 1800	300 to 3200
	C/W	19	0 to 2300	0 to 3200
	PLII	20	0 to 1300	0 to 2300
Infrared temperature sensor ES1B	10 to 70°C	21	0 to 90	0 to 190
	60 to 120°C	22	0 to 120	0 to 240
	115 to 165°C	23	0 to 165	0 to 320
	140 to 260°C	24	0 to 260	0 to 500
Current input	4 to 20 mA	25	One of the following ranges according to the scaling: −1999 to 9999 −199.9 to 999.9 −19.99 to 99.99 −1.999 to 9.999	
	0 to 20 mA	26		
Voltage input	1 to 5 V	27		
	0 to 5 V	28		
	0 to 10 V	29		
	0 to 50 mV*	30		

The default is 5.

* This range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

3   Set the control method.

Operation Level | Initial Setting Level

Press the ▭ (Level) Key for at least 3 seconds.

←The display flashes.

← ¯IN-t (IN-T) will be displayed to show that the Initial Setting Level has been entered.
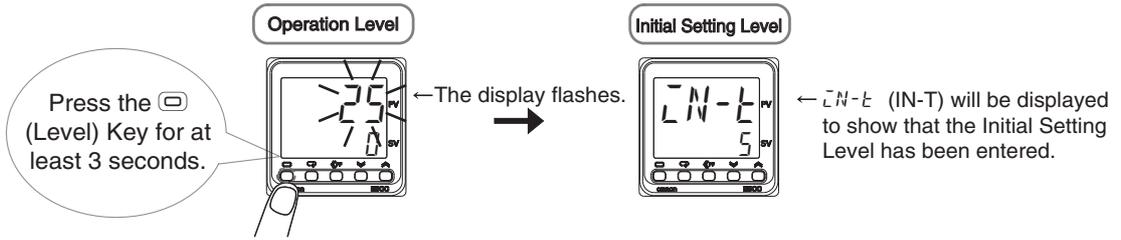

Standard Models

ON/OFF Control

Initial Setting Level

CNtL
ōNōF

Press the ⟳ (Mode) Key several times to display CNtL (CNTL).

←CNtL (CNTL): Indicates the control method. The default setting is ōNōF (ONOF: ON/OFF control).

If Pᴵd (PID control) is displayed, press the ⌄ (Down) Key to change to ōNōF (ONOF) (ON/OFF control).

PID Control

Initial Setting Level

CNtL
Pᴵd

CNtL (CNTL): Indicates the control method.

If ōNōF (ON/OFF control) is displayed, press the ⌃ (Up) Key to change to Pᴵd (PID) (PID control).

Position-proportional Models

Close/Floating Control

Initial Setting Level

CLFL
FLōt

←CLFL (CLFL): Indicates either close or floating control.

4 Set the alarm type.

Operation Level ← The display flashes. Initial Setting Level

Press the ▭ (Level) Key for at least 3 seconds.

← ¯ɪN-ᵗ (IN-T) will be displayed to show that the Initial Setting Level has been entered.

Initial Setting Level

Press the ⟲ (Mode) Key several times to display ALt I (ALT1).

ALt I (ALT1): Indicates the Alarm 1 Type parameter.*
The default setting is ₂ (2: Upper-limit alarm).

Initial Setting Level

Press the ⌃ (Up) and ⌄ (Down) Keys to change the value.

← Alarm type: 7 (Lower-limit alarm with standby sequence) (example)

*   If the Digital Controller is equipped with HB/HS alarm detection, the Alarm 1 Type is not displayed for the default settings. To use alarm 1, set an output assignment to alarm 1. For details, refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)*.

If required, use the ⟲ (Mode) Key and the ⌃ (Up) and ⌄ (Down) Keys to repeat the procedure to set alarm types for ALt₂ (ALT2) (Alarm 2 Type), ALt₃ (ALT3) (Alarm 3 Type), and ALt₄ (ALT4) (Alarm 4 Type). (The number of alarms that is supported depends on the model of Digital Controller. Some of the alarm parameters may not be displayed.)

When you are finished, press the ▭ (Level) Key for at least 1 second to return to the operation display.

Alarm Type Numbers

Set value	Alarm type	Description	Operation
0	Alarm function OFF	There will be no alarm outputs.	---
1	Upper- and lower-limit alarm	The alarm output is ON while the PV is equal to or higher than the upper-limit alarm point or while the PV is equal to or lower than the lower-limit alarm point.	Example: ON / OFF → Temperature Lower-limit alarm point (e.g., 80°C) Set point (e.g., 100°C) Upper-limit alarm point (e.g., 130°C) Alarm value lower limit (e.g., 20°C) Alarm value upper limit (e.g., 30°C)
2	Upper-limit alarm	The alarm output is ON while the PV is equal to or higher than the upper-limit alarm point.	Example: ON / OFF → Temperature Set point (e.g., 100°C) Upper-limit alarm point (e.g., 120°C) Alarm value upper limit (e.g., 20°C)
3	Lower-limit alarm	The alarm output is ON while the PV is equal to or lower than the lower-limit alarm point.	Example: ON / OFF → Temperature Lower-limit alarm point (e.g., 80°C) Set point (e.g., 100°C) Alarm value lower limit (e.g., 20°C)
4	Upper- and lower-limit range alarm	The alarm output is ON while the PV is equal to or lower than the upper-limit alarm point or equal to or higher than the lower-limit alarm point.	Example: ON / OFF → Temperature Lower-limit alarm point (e.g., 80°C) Set point (e.g., 100°C) Upper-limit alarm point (e.g., 130°C) Alarm value lower limit (e.g., 20°C) Alarm value upper limit (e.g., 30°C)
5	Upper- and lower-limit alarm with standby sequence	This alarm provides a standby sequence. The alarm output is ON while the PV is equal to or higher than the upper-limit alarm point or while the PV is equal to or lower than the lower-limit alarm point.	Example: ON / OFF → Temperature Lower-limit alarm point (e.g., 80°C) Set point (e.g., 100°C) Upper-limit alarm point (e.g., 130°C) Alarm value lower limit (e.g., 20°C) Alarm value upper limit (e.g., 30°C)
6	Upper-limit alarm with standby sequence	This alarm provides a standby sequence. The alarm output is ON while the PV is equal to or higher than the upper-limit alarm point.	Example: ON / OFF → Temperature Set point (e.g., 100°C) Upper-limit alarm point (e.g., 120°C) Alarm value upper limit (e.g., 20°C)
7	Lower-limit alarm with standby sequence	This alarm provides a standby sequence. The alarm output is ON while the PV is equal to or lower than the lower-limit alarm point.	Example: ON / OFF → Temperature Lower-limit alarm point (e.g., 80°C) Set point (e.g., 100°C) Alarm value lower limit (e.g., 20°C)

Set value	Alarm type	Description	Operation
8	Absolute-value upper-limit alarm	The alarm output is ON while the PV is equal to or higher than the alarm value.	Example: ON / OFF Upper-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) Temperature
9	Absolute-value lower-limit alarm	The alarm output is ON while the PV is equal to or lower than the alarm value.	Example: ON / OFF Lower-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) Temperature
10	Absolute-value upper-limit alarm with standby sequence	This alarm provides a standby sequence. The alarm output is ON while the PV is equal to or higher than the alarm value.	Example: ON / OFF Upper-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) Temperature
11	Absolute-value lower-limit alarm with standby sequence	This alarm provides a standby sequence. The alarm output is ON while the PV is equal to or lower than the alarm value.	Example: ON / OFF Lower-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) Temperature
12	Loop Burnout Alarm (LBA) (Valid only for alarm 1 on a Standard Model.)	The alarm output turns ON when the control loop is broken.	There is assumed to be a loop burnout alarm if the control deviation (SP – PV) is greater than the threshold set in the LBA Level parameter and if the PV is not reduced by at least the value set in the LBA Band parameter within a specific period of time. The LBA detection time and LBA band are set in parameters. PV / SP — LBA level, LBA band, LBA detection time, Time MV — 100% / 0%, Time LBA Alarm Output — ON / OFF, Time

Set value	Alarm type	Description	Operation
13	PV change rate alarm	The alarm output turns ON if the change in the PV within the specified calculation period exceeds a specific width.	The PV rate of change calculation period and the alarm value are set in parameters.
14	SP absolute-value upper-limit alarm	The alarm output is ON while the SP is equal to or higher than the alarm value.	
15	SP absolute-value lower-limit alarm	The alarm output is ON while the SP is equal to or lower than the alarm value.	
16	MV absolute-value upper-limit alarm	The alarm output is ON while the MV is equal to or higher than the alarm value.	
17	MV absolute-value lower-limit alarm	The alarm output is ON while the MV is equal to or lower than the alarm value.	
18	RSP absolute-value upper-limit alarm (Valid only with a remote SP input.)	The alarm output is ON while the RSP is equal to or higher than the alarm value.	
19	RSP absolute-value lower-limit alarm (Valid only with a remote SP input.)	The alarm output is ON while the RSP is equal to or lower than the alarm value.	

5 **Set the set point.**

Operation Display

Set point: 500°C (example)

Press the ⌃ (Up) and ⌄ (Down) Keys and the (Shift) Key to change the value.

*Hold the ⌃ (Up) or ⌄ (Down) Key to increment or decrement the value quickly.

6 **Set the alarm set value or values.**

Change the parameter that is displayed with the ⊡ (Mode) Key.

Alarm Type 2, 3, 6, 7, 8, 9,10, or 11 (Upper-limit Alarms and Lower-limit Alarms)

Alarm Type 1, 4, or 5 (Upper-limit and Lower-limit Alarms or Upper-limit and Lower-limit Range Alarms)

Operation Level

Press the ⊡ (Mode) Key several times to display *AL-1* (AL-1).

To set the alarm value upper limit, press the ⊡ (Mode) Key several times to display *AL1H* (AL1H).

To set the alarm value lower limit, press the ⊡ (Mode) Key several times to display *AL1L* (AL1L).

This concludes the procedure to set the input type, alarm type, control method, set point, and alarm set values. For information on the settings of the ON/OFF hysteresis, PID constants, HS alarm, HS alarm, and other parameters, refer to *Section 4 Basic Operation* or *Section 5 Advanced Operations*.

4

Basic Operation

4-1   Moving between Setting Levels

The Operation Level is displayed first when the power supply to the Digital Controller is turned ON. To display the parameters, you must move to the following setting levels.
• Operation Level (Entered when the power supply is turned ON.)
• Initial Setting Level
• Adjustment Level
• Protect Level
• Advanced Function Setting Level
• Communications Setting Level

The procedures to move between the setting levels starting from the Operation Level are provided below.

4-1-1   Moving to the Initial Setting Level

Moving from the Operation Level to the Initial Setting Level

1   **Press the ⊟ Key for at least 3 seconds in the Operation Level.** The No. 1 display will flash when the key is pressed for 1 s or longer.

The display will change from the Operation Level to the Initial Setting Level.

4-1-4   Moving to the Advanced Function Setting Level

Moving to the Advanced Function Setting Level for the First Time (i.e., with the Default Settings)

To enter the Advanced Function Setting Level, you must first enter the Protect Level and change the setting of the $\overline{\iota}[P\mathrm{t}$ (Initial Setting/Communications Protect) parameter to $\mathit{0}$ (enable moving to Advanced Function Setting Level) to clear the protection.

● Clearing Protection

1	**Press the ⊖ and ⊚ Keys simultaneously for at least 3 seconds* in the Operation Level.**
	The No. 1 display will flash when the key is pressed for 1 s or longer.
	* The key pressing time can be changed in the Move to Protect Level Time parameter in the Advanced Function Setting Level.
	The display will change to the Protect Level.
		Operation Level
		
		`25`
		`0`

2	**Press the ⊚ Key once at the Operation/Adjustment Protect parameter.** The display will change to the Initial Setting/Communications Protect parameter.	Protect Level `ōAPt` `0` Operation/ Adjustment Protect
3	**Press the ⊗ or ⊙ Key at the Initial Setting/Communications Protect parameter to change the set value to 0 (enable moving to Advanced Function Setting Level).** Now the $\mathrm{AM\bar{o}v}$ (Move to Advanced Function Setting Level) parameter can be displayed in the Initial Setting Level. The default is $\mathit{1}$ (disable moving to Advanced Function Setting Level).	`ī[Pt` Initial Setting/ Communications Protect `1` *1*: Moving to Advanced Function Setting Level is disabled.
4	**Press the ⊖ and ⊚ Keys simultaneously for at least 1 second in the Protect Level.** The display will change from the Protect Level to the Operation Level.	Protect Level `ī[Pt` Initial Setting/ Communications `0` Protect Operation Level `25` PV/SP `0`
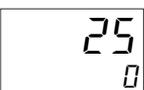

Moving to the Advanced Function Setting Level after Clearing Protection

After you have set the $\overline{\iota}\overline{\iota}P\overline{\iota}$ (Initial Setting/Communications Protect) parameter to $\overline{\iota}$ (enable moving to Advanced Function Setting Level), select $\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}$ (Move to Advanced Function Setting Level) in the Initial Setting Level.

● Moving to the Advanced Function Setting Level

1	**Press the ▣ Key for at least 3 seconds in the Operation Level.** The No. 1 display will flash when the key is pressed for 1 s or longer. The display will change from the Operation Level to the Initial Setting Level.	Operation Level **25** **0**
2	**Press the ▣ Key several times in the Initial Setting Level to display** $\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}$ **(Move to Advanced Function Setting Level).**	Initial Setting Level $\overline{\iota}N\overline{\iota}\overline{\iota}$ Input Type 5
3	**Press the ⌄ and ⌃ Keys at the Move to Advanced Function Setting Level parameter and then enter** – $\overline{\iota}\overline{\iota}\overline{\iota}$. * You can hold the ⌃ (Up) or ⌄ (Down) Key to increment or decrement the set value quickly.	Initial Setting Level $\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}$ Move to Advanced 0 Function Setting Level
4	**Press ▣ Key once or wait for 2 seconds or longer without doing anything.** The display will change to the Advanced Function Setting Level.	$\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}\overline{\iota}$ Move to Advanced Function Setting Level – $\overline{\iota}\overline{\iota}\overline{\iota}$ –169: Password to move to Advanced Function Setting Level Advanced Function Setting Level $\overline{\iota}N\overline{\iota}\overline{\iota}$ Parameter Initialization $\overline{\iota}FF$

● Moving from the Advanced Function Setting Level to the Operation Level

1	**Press the ▣ Key for at least 1 second in the Advanced Function Setting Level.** The display will change from the Advanced Function Setting Level to the Initial Setting Level.	Advanced Function Setting Level $\overline{\iota}N\overline{\iota}\overline{\iota}$ $\overline{\iota}FF$

4-1 Moving between Setting Levels

4

4-1-5 Moving to the Communications Setting Level
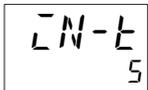

4-2   Initial Setting Examples

Initial hardware setup, including the sensor input type, alarm types, control periods, and other settings, is done using parameter displays. The ⊟ and ⊡ Keys are used to switch between parameters, and the amount of time that you press the keys determines which parameter you move to.

This section describes three typical examples.

Explanation of Examples

Changing Parameters
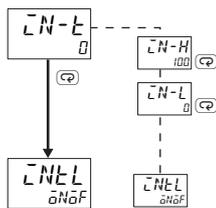

A ⬚ image means that there are parameters. Continue pressing the ⊡ Key to change parameters until you reach the intended parameter.

Changing Numbers
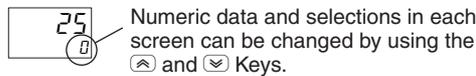

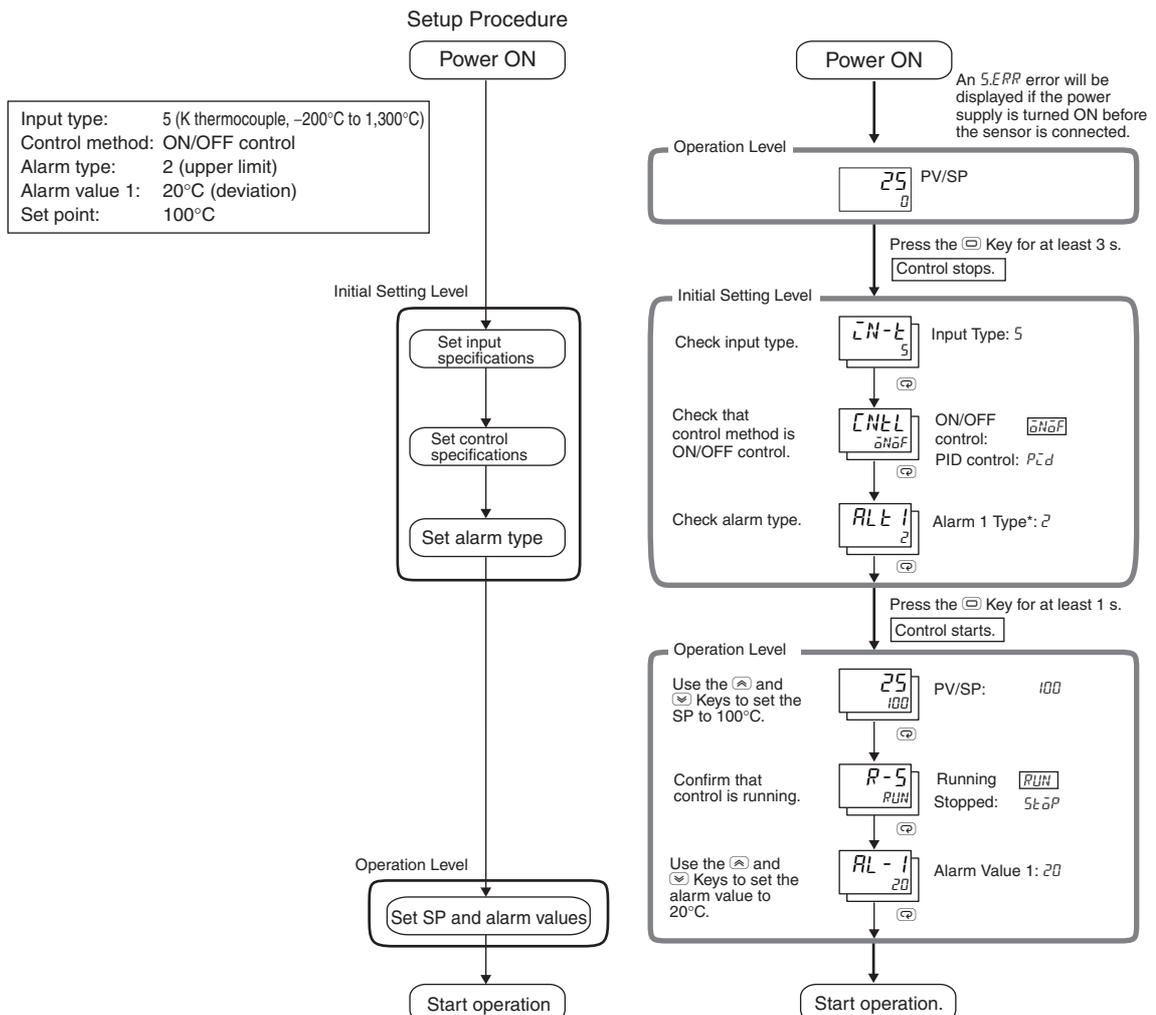

Numeric data and selections in each screen can be changed by using the ⊼ and ⊻ Keys.

Example 1

Setup Procedure

Input type: 5 (K thermocouple, −200°C to 1,300°C)
Control method: ON/OFF control
Alarm type: 2 (upper limit)
Alarm value 1:   20°C (deviation)
Set point: 100°C

*   If the Controller is equipped with HB/HS alarm detection, the default setting for the Auxiliary Output 1 Assignment is for heater alarms. Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To enable alarm 1, set an output assignment to alarm 1. For details, refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)*.

Example 2

Input type:	9 (T thermocouple, −200°C to 400°C)
Control method:	PID control
PID constants found using auto-tuning (AT).	
Alarm type:	2 (upper limit)
Alarm value 1:	30°C
Set point:	150°C

Setup Procedure

Power ON

Initial Setting Level
- Set input specifications
- Set control specifications
- Set alarm type

Operation Level
- Set SP

Adjustment Level
- AT execution

(When PID control is selected)

Operation Level
- Set alarm value

- Start operation

Power ON

An *S.ERR* error will be displayed if the power supply is turned ON before the sensor is connected.

Operation Level
25 / 0   PV/SP

Press the ◻ Key for at least 3 s.
Control stops.

Initial Setting Level

Use the ⌃ and ⌄ Keys to select the input type.
iN-t / 9   Input Type: 9

Use the ⌃ and ⌄ Keys to select PID control.
CNtL / Pid   ON/OFF control: *öNöF*
PID control: *Pid*

For PID, set *Pid*.

Use the ⌃ and ⌄ Keys to set ST to OFF.
St / öFF   To execute ST: *öN*
To cancel ST: *öFF*

Check the control period.
CP / 20   Control Period (Heat) (Unit: Seconds)   20

It is recommended that 20 seconds be set for a relay output and 2 seconds for an SSR voltage output. When a linear current output is used, the Control Period parameter cannot be used.

Check the alarm type.
ALt 1 / 2   Alarm 1 Type*:   2

Press the ◻ Key for at least 1 s.
Control starts.

Operation Level

Use the ⌃ and ⌄ Keys to set the SP to 150°C.
25 / 150   PV/SP: *150*

Press the ◻ Key (for less than 1 s).

Adjustment Level

Execute AT.
At / öFF   To execute 100%AT: *At-2*
To execute 40%AT: *At-1*
To cancel AT: *öFF*

The TUNE indicator will light during autotuning.

Press the ◻ Key (for less than 1 s).

Operation Level

Confirm that the set point is 150°C.
25 / 150   PV/SP

Confirm that control is running.
R-S / RUN   Running   *RUN*
Stopped   *StöP*

Use the ⌃ and ⌄ Keys to set the alarm value to 30°C.
AL-1 / 30   Alarm Value 1   *30*

Start operation.

---

*   If the Controller is equipped with HB/HS alarm detection, the default setting for the Auxiliary Output 1 Assignment is for heater alarms. Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To enable alarm 1, set an output assignment to alarm 1. For details, refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)*.

Example 3 (E5EC/E5AC Position-proportional Models Only)

Input type:	5 (K thermocouple, −200°C to 1,300°C)
Control method:	Floating control
SP ramp time unit:	EU/min
Travel time:	45 s
SP ramp set value:	10 EU (°C)
Set point:	250°C

Setup Procedure

Power ON

Power ON — An 5.ERR error will be displayed if the power supply is turned ON before the sensor is connected.

Operation Level

25 / 0 PV/SP

Press the ◻ Key for at least 3 s.
Control stops.

Initial Setting Level

Initial Setting Level

Set input specifications

Check input type. ĪN-t / 5 Input Type: 5

Set control specifications

Check that control method is floating control. CLFL / FLōt Floating control: FLōt   Close control: CLōS

Set travel time.

Use the ⌃ and ⌄ Keys to set the travel time to 45 s. Mōt / 45 Travel Time: 45

Press the ◻ Key for at least 1 s.
Control starts.

Operation Level

Operation Level

Set SP

Use the ⌃ and ⌄ Keys to set the SP to 250°C. 25 / 250 PV/SP: 250

Press the ◻ Key (for less than 1 s.)

Adjustment Level

Adjustment Level

At / ōFF

Set SP ramp

Use the ⌃ and ⌄ Keys to set the SP ramp set value to 10°C. SPRt / 10 SP Ramp Set Value: 10

Press the ◻ Key (for less than 1 s.)

Operation Level

25 / 250 PV/SP: 250

Confirm that control is running. R-S / RUN Running: RUN Stopped: StōP

Start operation

Start operation.

4-3 Setting the Input Type

The Digital Controller supports four input types: resistance thermometer, thermocouple, infrared temperature sensor, and analog inputs. Set the input type that matches the sensor that is used.

4-3-1 Input Type

The following example shows how to set a K thermocouple for −20.0 to 500.0°C (input type 6).

Operating Procedure

1 **Press the ▢ Key for at least 3 seconds to move from the Operation Level to the Initial Setting Level. The** *ᴵN-ᵗ* **(Input Type) parameter will be displayed.**

Initial Setting Level

$\overline{ᴵN}$-ᵗ   Input Type
       5

2 **Press the ⌃ or ⌄ Key to select *6* (K thermocouple at −20.0 to 500.0°C).**
The default is *5* (5: K thermocouple at −200 to 1,300°C).

$\overline{ᴵN}$-ᵗ
       6

📝 **Additional Information**

Changes that are made with key operations are applied when the ▢ or ▢ Key is pressed. They are also applied if you do nothing for 3 seconds or longer.

List of Input Types

	Specifications	Set value	Temperature range in °C	Temperature range in °F
Resistance thermometer	Pt100	0	−200 to 850	−300 to 1500
		1	−199.9 to 500.0	−199.9 to 900.0
		2	0.0 to 100.0	0.0 to 210.0
	JPt100	3	−199.9 to 500.0	−199.9 to 900.0
		4	0.0 to 100.0	0.0 to 210.0
Thermocouple	K	5	−200 to 1300	−300 to 2300
		6	−20.0 to 500.0	0.0 to 900.0
	J	7	−100 to 850	−100 to 1500
		8	−20.0 to 400.0	0.0 to 750.0
	T	9	−200 to 400	−300 to 700
		10	−199.9 to 400.0	−199.9 to 700.0
	E	11	−200 to 600	−300 to 1100
	L	12	−100 to 850	−100 to 1500
	U	13	−200 to 400	−300 to 700
		14	−199.9 to 400.0	−199.9 to 700.0
	N	15	−200 to 1300	−300 to 2300
	R	16	0 to 1700	0 to 3000
	S	17	0 to 1700	0 to 3000
	B	18	100 to 1800	300 to 3200
	C/W	19	0 to 2300	0 to 3200
	PLII	20	0 to 1300	0 to 2300
Infrared temperature sensor ES1B	10 to 70°C	21	0 to 90	0 to 190
	60 to 120°C	22	0 to 120	0 to 240
	115 to 165°C	23	0 to 165	0 to 320
	140 to 260°C	24	0 to 260	0 to 500
Current input	4 to 20 mA	25	One of the following ranges according to the scaling: −1999 to 9999 −199.9 to 999.9 −19.99 to 99.99 −1.999 to 9.999	
	0 to 20 mA	26		
Voltage input	1 to 5 V	27		
	0 to 5 V	28		
	0 to 10 V	29		
	0 to 50 mV*	30		

The default is 5.

* This range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

⛛ Precautions for Correct Use

S.ERR (S.ERR: input error) flashes on the display if a sensor is not connected or if the connected sensor is different from input type. Connect a sensor if one is not already connected.

4-4   Selecting the Temperature Unit

4-4-1   Temperature Unit

- Either °C or °F can be selected as the temperature unit.
- Set the temperature unit in the Temperature Unit (d-U) parameter of the Initial Setting Level. The default is C (°C).
  The following procedure selects °C.

Operating Procedure

1 Press the ⟳ Key several times in the Initial Setting Level to display d-U (Temperature Unit).	Initial Setting Level d-U Temperature C Unit
2 Press the ⌃ or ⌄ Key to select °C. The default is C (°C). C: °C, F: °F	d-U C
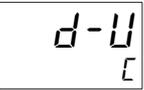

*   The temperature unit is not displayed by the E5DC and E5DC-B.

4-5   Selecting PID Control or ON/OFF Control (Not Supported for Position-proportional Models.)

Two control methods are supported: 2-PID control and ON/OFF control. Switching between 2-PID control and ON/OFF control is executed by means of the PID ON/OFF parameter in the initial setting level. When this parameter is set to $P\bar{\iota}d$, 2-PID control is selected, and when set to $\bar{o}N\bar{o}F$, ON/OFF control, is selected. The default is $\bar{o}N\bar{o}F$.

● **2-PID Control**

PID control is set by AT (auto-tuning), ST (self-tuning), or manual setting.

For PID control, set the PID constants in the Proportional Band (P), Integral Time ($\bar{\iota}$), and Derivative Time (d) parameters.

For heating and cooling control, also set the Proportional Band (Cooling) ($\bar{C}$-P), Integral Time (Cooling) ($\bar{C}$-$\bar{\iota}$), and Derivative Time (Cooling) ($\bar{C}$-d).

● **ON/OFF Control**

In ON/OFF control, the control output is turned ON when the process value is lower than the current set point, and the control output is turned OFF when the process value is higher than the current set point (reverse operation).

4-6   Setting Output Specifications

4-6-1   Control Periods (Not Supported for Position-proportional Models.)
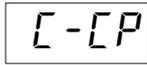

| CP | Control Period (Heating) |

| C-CP | Control Period (Cooling) |

- Set the output periods (control periods). Though a shorter period provides better control performance, it is recommended that the control period be set to 20 seconds or longer for a relay output to preserve the service life of the relay. After the settings have been made in the initial setup, readjust the control period, as required, by means such as trial operation.
- Set the control periods in the Control Period (Heating) and Control Period (Cooling) parameters in the Initial Setting Level. The default is 20 seconds for a relay output and 2 seconds for a voltage output (for driving SSR).
- The control periods are used only for PID control.
- The Control Period (Cooling) parameter is used only for heating/cooling control.
- When control output is used as a linear current output, the Control Period parameter cannot be used.

4-6-2   Direct and Reverse Operation

| oREV |

- Direct operation increases the manipulated variable whenever the process value increases. Reverse operation decreases the manipulated variable whenever the process value increases.

Direct operation
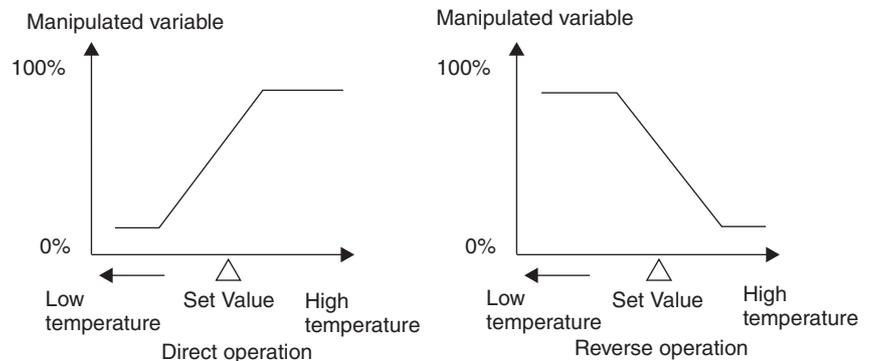

Reverse operation

For example, when the process value (PV) is lower than the set point (SP) in a heating control system, the manipulated variable increases according to the difference between the PV and SP. Accordingly, reverse operation is used in a heating control system. Direct operation is used in a cooling control system, in which the operation is the opposite of a heating control system. The Control Output 1 Assignment is set to $\bar{o}$ (control output (heating)) for either direct or reverse operation.

- Direct/reverse operation is set in the Direct/Reverse Operation parameter in the Initial Setting Level. The default is $\bar{o}R$-R (reverse operation).

4-6 Setting Output Specifications

4

4-6-1 Control Periods (Not Supported for Position-proportional Models.)

In this example, direct/reverse operation, and control period (heating) parameters are checked.

Direct/reverse operation = $\bar{o}R$-R (reverse operation)

Control period (heating) = 20 (seconds)

Operating Procedure

• Setting the Control Period (Heating) Parameter

1	Press the ⊙ Key several times in the Initial Setting Level to display $[P$ (Control Period (Heating)).	Initial Setting Level $[P$ 20 Control Period (Heating)
2	Press the ⊙ or ⊙ Key to set the value to 20. The default for a relay output is 20 seconds.	$[P$ 20

• Setting Direct/Reverse Operation

1	Press the ⊙ Key several times in the Initial Setting Level to display $\bar{o}REV$ (Direct/Reverse Operation).	Initial Setting Level $\bar{o}REV$ $\bar{o}R$-R Direct/Reverse Operation
2	Press the ⊙ or ⊙ Key to select $\bar{o}R$-R (Reverse Operation). The default is $\bar{o}R$-R (Reverse Operation).	$\bar{o}REV$ $\bar{o}R$-R

4-6-3   Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)

• Function assignments can be changed by changing the settings for control and auxiliary output assignments.

• The default function assignments for each output are shown below.

Parameter name	Display	Initial status
Control Output 1 Assignment	$\bar{o}Ut\ 1$	Control output (heating)
Control Output 2 Assignment (E5CC, E5EC, and E5AC Only)	$\bar{o}Ut2$	Not assigned.
Auxiliary Output 1 Assignment	$5Ub\ 1$	Alarm 1[1]
Auxiliary Output 2 Assignment	$5Ub2$	Alarm 2
Auxiliary Output 3 Assignment (E5CC, E5EC, E5EC-B, and E5AC Only)	$5Ub3$	Alarm 3
Auxiliary Output 4 Assignment (E5EC, E5EC-B, and E5AC Only)	$5Ub4$	Alarm 4

[1] If the Digital Controller is equipped with HB/HS alarm detection, it is set by default to detect heater alarms (HA). Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To enable alarm 1, set an output assignment to alarm 1. If the Program Pattern parameter is changed to a setting other than OFF, Auxiliary Output 1 Assignment parameter is set as the program end output.

• Refer to page 6-81 and page 6-82 for the functions that can be assigned to the outputs.

• Each output is automatically initialized as shown below by changing the control mode between standard and heating/cooling.

Assigned Output Functions

Digital Controllers with Three or Fewer Auxiliary Outputs

Parameter name	Display	Without control output 2		With control output 2	
		Standard	Heating/cooling	Standard	Heating/cooling
Control Output 1 Assignment	ōūŁ ¹	Control output (heating)	Control output (heating)	Control output (heating)	Control output (heating)
Control Output 2 Assignment	ōūŁ²	---	---	Not assigned.	Control output (cooling)
Auxiliary Output 1 Assignment	5ūb ¹	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]
Auxiliary Output 2 Assignment	5ūb²	Alarm 2	Control output (cooling)[*2]	Alarm 2	Alarm 2
Auxiliary Output 3 Assignment	5ūb³	Alarm 3	Alarm 3	Alarm 3	Alarm 3

Digital Controllers with Four Auxiliary Outputs

Parameter name	Display	Without control output 2		With control output 2	
		Standard	Heating/cooling	Standard	Heating/cooling
Control Output 1 Assignment	ōūŁ ¹	Control output (heating)	Control output (heating)	Control output (heating)	Control output (heating)
Control Output 2 Assignment	ōūŁ²	---	---	Not assigned.	Control output (cooling)
Auxiliary Output 1 Assignment	5ūb ¹	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]
Auxiliary Output 2 Assignment	5ūb²	Alarm 2	Alarm 2	Alarm 2	Alarm 2
Auxiliary Output 3 Assignment	5ūb³	Alarm 3	Alarm 3	Alarm 3	Alarm 3
Auxiliary Output 4 Assignment	5ūb⁴	Alarm 4	Control output (cooling)	Alarm 4	Alarm 4

*1 If the Digital Controller is equipped with HB/HS alarm detection, it is set by default to detect heater alarms (HA). Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To enable alarm 1, set an output assignment to alarm 1. If the Program Pattern parameter is changed to a setting other than OFF, Auxiliary Output 1 Assignment parameter is set as the program end output.
*2 When heating/cooling control is used on the E5GC, auxiliary output 1 is the control output for cooling.

● Alarms

It will be specified in this section when an alarm must be assigned, i.e., when an alarm must be set for the Control Output 1 or 2 Assignment parameters, or for the Auxiliary Output 1 to 4 Assignment parameters. For example, if alarm 1 is set for the Control Output 1 Assignment parameter, then alarm 1 has been assigned.

Assigning a work bit to either control output 1 or 2 or to auxiliary output 1 to 4 is also considered to be the same as assigning an alarm. For example, if work bit 1 is set for the Auxiliary Output 1 Assignment parameter, then alarms 1 to 4 have been assigned.

Assign the control outputs and auxiliary outputs.

Control output 1: Control output (heating)
Control output 2: Control output (cooling)
Auxiliary output 1: Alarm 1
Auxiliary output 2: Alarm 2

Operating Procedure

• Setting Heating/Cooling Control

1	Press the ⟳ Key several times in the Initial Setting Level to display 5-HC (Standard or Heating/Cooling).	Initial Setting Level **5-HC** 5ENd — Standard or Heating/Cooling
2	Press the ⌃ or ⌄ Key to set the parameter to H-C. The default is 5ENd (standard).	**5-HC** H-C

    * Use the following procedures to check the output assignments. The output assignments are changed automatically when you change between standard and heating/cooling control. You do not have to set them.

• Setting Control Output 1

1	Press the ⟳ Key several times in the Advanced Function Setting Level to display ōUt1 (Control Output 1 Assignment).	Advanced Function Setting Level **ōUt1** ō — Control Output 1 Assignment
2	Set the parameter to ō (Control Output (Heating)). The default is ō (Control Output (Heating)).	**ōUt1** ō

• Setting Control Output 2

1	Press the ⟳ Key several times in the Advanced Function Setting Level to display ōUt2 (Control Output 2 Assignment).	Advanced Function Setting Level **ōUt2** C-ō — Control Output 2 Assignment
2	Set the parameter to C-ō (Control Output (Cooling)). As soon as you select H-C (Heating/Cooling) for the Standard or Heating/Cooling parameter, the setting of this parameter is automatically changed to C-ō (Control Output (Cooling)).	**ōUt2** C-ō

• Setting Auxiliary Output 1

1	Press the ⟳ Key several times in the Advanced Function Setting Level to display 5Ub1 (Auxiliary Output 1 Assignment).	Advanced Function Setting Level **5Ub1** ALM1 — Auxiliary Output 1 Assignment
2	Press the ⌃ or ⌄ Key to set the parameter to ALM1. The default is ALM1 (Alarm 1). If the Digital Controller is equipped with HB/HS alarm detection, this parameter is set by default to HA (heater alarm).	**5Ub1** ALM1

• Setting Auxiliary Output 2

1 **Press the** 🔁 **Key several times in the Advanced Function Setting Level to display** `SUb2` **(Auxiliary Output 2 Assignment).**	Advanced Function Setting Level `SUb2` `ALM2` Auxiliary Output 2 Assignment
2 **Press the** 🔼 **or** 🔽 **Key to set the parameter to** `ALM2`. The default is `ALM2` (Alarm 2).	`SUb2` `ALM2`

4-6-4   Auxiliary Output Opening or Closing in Alarm

• When "close in alarm" is set, the status of the auxiliary output is output unchanged. When "open in alarm" is set, the status of the auxiliary output function is reversed before being output.
• Each auxiliary output can be set independently.
• These settings are made in the Auxiliary Output 1 to 4 Open in Alarm parameters (Advanced Function Setting Level).
• The default is `N-o`: Close in Alarm.

	Auxiliary output functions 1 to 4	Auxiliary output	Indicators (SUB1 to SUB4)
Close in Alarm (`N-o`)	ON	ON	Lit
	OFF	OFF	Not lit
Open in Alarm (`N-C`)	ON	OFF	Lit
	OFF	ON	Not lit

• The alarm output will turn OFF (i.e., the relay contacts will open) when power is interrupted and for about two seconds after the power is turned ON regardless of the setting of the Auxiliary Output 1 to 4 Open in Alarm parameter.

4-7   Setting the Set Point (SP)

Operation Level

```
  20
     0
```
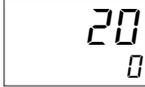

The Operation Level is displayed when the power is turned ON. For the default setting, the No. 1 display shows the PV, the No. 2 display shows the SP, and the No. 3 display (E5EC, E5EC-B, or E5AC only) shows the MV.

```
  20
     0
  50.0
```

The contents that is set in the PV/SP Display Screen Selection parameter in the Advanced Function Setting Level are displayed.
For details, refer to *4-13-1 PV/SP Display Selections*.

4-7-1   Changing the SP

- The set point cannot be changed when the Operation/Adjustment Protect parameter is set to 3. For details, refer to *5-7 Using the Key Protect Level*.
- To change the set point, press the ⊙ or ⊙ Key in the PV/SP parameter (Operation Level) or for the SP/SP (character display) display in the Operation Level, and set the desired set value. The new set point is selected three seconds after you have specified the new value.
- Multi-SP is used to switch between eight set points. For details, refer to *5-4 Using Event Inputs* for details.

In this example, the set point is changed from 0°C to 200°C.

Operating Procedure

1   **Press the ⊙ or ⊙ Key in the Operation Level to set the SP to 200. The default SP is 0°C.**

Operation Level

```
  30
   200
```
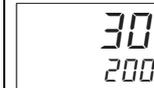

🖹   **Additional Information**

- If there are a lot of digits in a numeric value, you can use the Ⓟ (Shift Key) to select the digit to change before you change the value of the digit.
   Example: Changing 1,000°C to 1,200°C

   1   **Press Ⓟ Key three times.**
   The third digit will flash.

   Operation Level

   ```
     30
    1000
   ```

   2   **Press the ⊙ Key to set the value to 1200.**

   Operation Level

   ```
     30
    1200
   ```

4   Basic Operation

4-8 Using ON/OFF Control (Not Supported for Position-proportional Models.)

4
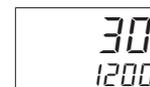

4-8-1 ON/OFF Control

4-8   Using ON/OFF Control (Not Supported for Position-proportional Models.)

In ON/OFF control, the control output turns OFF when the temperature being controlled reaches the preset set point. When the manipulated variable turns OFF, the temperature begins to fall and the control turns ON again. This operation is repeated over a certain temperature range. At this time, how much the temperature must fall before control turns ON again is determined by the Hysteresis (Heating) parameter. Also, what direction the manipulated variable must be adjusted in response to an increase or decrease in the process value is determined by the Direct/Reverse Operation parameter.

4-8-1   ON/OFF Control

- Switching between 2-PID control and ON/OFF control is performed using the PID ON/OFF parameter in the Initial Setting Level. When this parameter is set to $P\bar{\iota}d$, 2-PID control is selected, and when it is set to $\bar{o}N\bar{o}F$, ON/OFF control is selected. The default is $\bar{o}N\bar{o}F$.

● Hysteresis

- With ON/OFF control, hysteresis is used to stabilize operation when switching between ON and OFF. The control output (heating) and control output (cooling) functions are set in the Hysteresis (Heating) and Hysteresis (Cooling) parameters, respectively.
- In standard control (heating or cooling control), the setting of the Hysteresis (Heating) parameter in the Adjustment Level is used as the hysteresis regardless of whether the control type is heating control or cooling control.
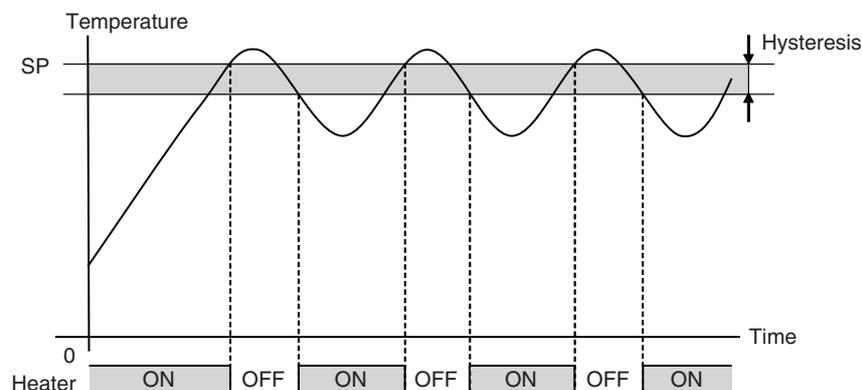

Parameters

Display	Parameter	Application	Level
5-HC	Standard or Heating/Cooling	Specifying control method	Initial Setting Level
CNtL	PID ON/OFF	Specifying control method	Initial Setting Level
oREV	Direct/Reverse Operation	Specifying control method	Initial Setting Level
C-db	Dead Band	Heating/cooling control	Adjustment Level
HYS	Hysteresis (Heating)	ON/OFF control	Adjustment Level
CHYS	Hysteresis (Cooling)	ON/OFF control	Adjustment Level

4-8-2   Settings

To execute ON/OFF control, set the Set Point, PID ON/OFF, and Hysteresis parameters.

Setting the PID ON/OFF Parameter

Confirm that the PID ON/OFF parameter is set to oNoF in the Initial Setting Level.

Operating Procedure

1 Press the ⊡ Key several times in the Initial Setting Level to display CNtL (PID ON/OFF). The default is oNoF (ON/OFF control).	Initial Setting Level CNtL PID ON/OFF oNoF

Setting the SP

In this example, the set point is set to 200°C. The set value (i.e., the SP) is shown at the bottom of the display.

Operating Procedure

1 Select PV/SP in the Operation Level.	Operation Level 25 PV/SP 100
2 Press the ⊙ or ⊙ Key to set the SP to 200. The default is 0. The new set value can be saved by pressing the ⊡ Key, or it will go into effect after 3 seconds has elapsed.	25 200

Setting the Hysteresis

Set the hysteresis to 2.0°C.

Operating Procedure

		Adjustment Level
1	Press the 🔁 Key several times in the Adjustment Level to display *HYS* (Hysteresis (Heating)).	*HYS* / *1.0* Hysteresis (Heating)
2	Press the ⌃ or ⌄ Key to set the hysteresis to 2.0. The default is 1.0. The new set value can be saved by pressing the 🔁 Key, or it will go into effect after 3 seconds has elapsed.	*HYS* / *2.0*

4-9   Determining PID Constants (AT, ST, Manual Setup)

4-9-1   AT (Auto-tuning)

At

- When AT is executed, the optimum PID constants for the set point at that time are set automatically. A method (called the limit cycle method) for forcibly changing the manipulated variable and finding the characteristics of the control object is employed.
- Either 40% AT or 100% AT can be selected depending on the width of MV variation in the limit cycle. In the AT Execute/Cancel parameter, specify At-2 (100% AT) or At-1 (40% AT). To cancel AT, specify oFF (AT cancel).
- Only 100% autotuning is supported for heating and cooling control or floating position-proportional control.
- If the Heating/Cooling Tuning Method parameter is set to any value other than 0 (same as heating control), the PID constants are set automatically for both heating control and cooling control.
- AT cannot be executed when control has stopped or during ON/OFF control.
- The results of autotuning are saved in the following parameters in the Adjustment Level: Proportional Band (P), Integral Time (I), Derivative Time (D), Proportional Band (Cooling) (C-P), Integral Time (Cooling) (C-I), and Derivative Time (Cooling) (C-D).

Adjustment Level
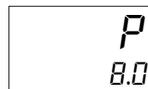

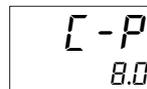

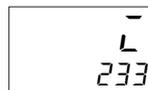

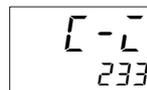

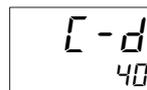

P 8.0	Proportional Band	C-P 8.0	Proportional Band (Cooling)
L 233	Integral Time	C-L 233	Integral Time (Cooling)
d 40	Derivative Time	C-d 40	Derivative Time (Cooling)

● **AT Operations**

AT is started when either At-2 (100% AT) or At-1 (40% AT) is specified for the AT Execute/Cancel parameter.

The TUNE indicator will light during execution.

Only the Communications Writing, RUN/STOP, AT Execution/Cancel, and Program Start parameters can be changed during AT execution. Other parameters cannot be changed.

AT Calculated Gain ▐ 000 ▌

The AT Calculated Gain parameter sets the gain for when PID values are calculated using AT. When emphasizing response, decrease the set value. When emphasizing stability, increase the set value.

AT Hysteresis ▐ 000 ▌

The AT Hysteresis parameter sets the hysteresis when switching ON and OFF for the limit cycle operation during auto-tuning.

Limit Cycle MV Amplitude 000

The Limit Cycle MV Amplitude parameter sets the MV amplitude for limit cycle operation during auto-tuning.

* This setting is disabled for 100% AT.

● **40% AT**

• The width of MV variation in the limit cycle can be changed in the Limit Cycle MV Amplitude parameter, but the AT execution time may be longer than for 100% AT. The limit cycle timing varies according to whether the deviation (DV) at the start of auto-tuning execution is less than 10% FS.
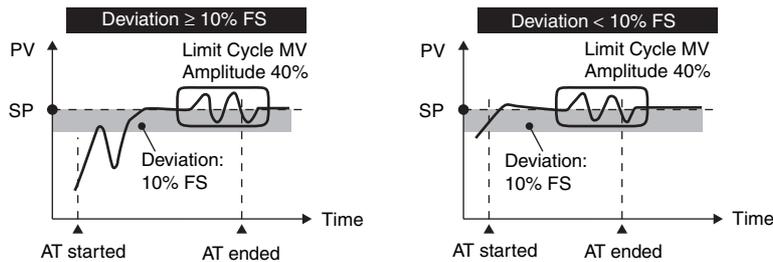

● **100% AT**

• Operation will be as shown in the following diagram, regardless of the deviation (DV) at the start of AT execution. To shorten the AT execution time, select 100% AT.
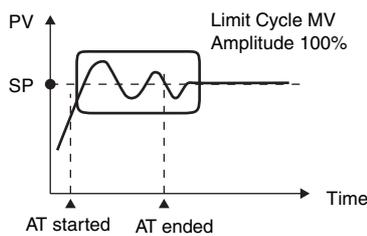

* The Limit Cycle MV Amplitude parameter is disabled.

The 100% autotuning is executed.

Operating Procedure

1	Press the ⊚ Key several times in the Adjustment Level to display *AL* (AT Execute/Cancel).	Adjustment Level **AL** *oFF* AT Execute/Cancel
2	Press the ⊘ or ⊗ Key to select *AL-2* (100% AT execute). * The TUNE indicator will light during autotuning.	**AL** *AL-2*
3	When AT ends, the AT Execute/Cancel parameter is set to *oFF*.	Adjustment Level **AL** *oFF* AT Execute/Cancel

✏ **Precautions for Correct Use**

To execute autotuning, you must set the RUN/STOP parameter to RUN (default: RUN) and the PID ON/OFF parameter to PID (default: ON/OFF). If the RUN/STOP parameter is set to STOP or the PID ON/OFF parameter is set to ON/OFF, the settings for the AT Execute/Cancel parameter will not be displayed.

Supplemental Information on AT Operation
- Perform AT with the control set point set and the power supply to the output side (e.g., heater) turned ON.
- You can start AT from any current temperature.

Additional Information

- **PID Constants**
  When control characteristics are already known, PID constants can be set directly to adjust control. The PID constants are set in the following parameters in the Adjustment Level: Proportional Band (P), Integral Time (I), Derivative Time (D), Proportional Band (Cooling) (C-P), Integral Time (Cooling) (C-I), and Derivative Time (Cooling) (C-D).

- **Integral/Derivative Time Unit**
  If the results of executing AT give a derivative time (D) of less than 10 seconds, we recommend that you set the Integral/Derivative Time Unit parameter (Advanced Setting Level) to 0.1 seconds and perform AT again.

4-9 Determining PID Constants (AT, ST, Manual Setup)

4

4-9-2 ST (Self-tuning) (Not Supported for Position-proportional Models.)

4-9-2 ST (Self-tuning) (Not Supported for Position-proportional Models.)

St

ST (self-tuning) is a function that finds PID constants by using step response tuning (SRT) when Digital Controller operation begins or when the set point is changed.

Once the PID constants have been calculated, ST is not executed when the next control operation is started as long as the set point remains unchanged.

ST (self-tuning) is enabled when the ST parameter is set to ON in the Initial Setting Level.

When executing self-tuning, turn ON power for the load (e.g., heater) at the same time as or before supplying power to the Digital Controller. If power is turned ON for the Digital Controller before turning ON power for the load, self-tuning will not be performed properly and optimum control will not be achieved.

This procedure executes self-tuning (ST).

Operating Procedure

1 **Press the ⊙ Key several times in the Initial Setting Level to display 5t (ST).**

Initial Setting Level

St ST
oN

2 **Press the ⊙ or ⊙ Key to select oN (ST ON).**
The default is ON.

   * The TUNE indicator will flash during ST execution.

St
oN

📓 Additional Information

PID Constants

When control characteristics are already known, PID constants can be set directly to adjust control. The PID constants are set in the following parameters in the Adjustment Level: Proportional Band (P), Integral Time (I), Derivative Time (D), Proportional Band (Cooling) (C-P), Integral Time (Cooling) (C-I), and Derivative Time (Cooling) (C-D).

● **Startup Conditions**

Self-tuning by step response tuning (SRT) is started when the following conditions are met after program execution is started and the set point is changed.

At start of operation	When set point is changed
1. The set point at the start of operation differs from the set point when the previous SRT was executed.[1]	1. The new set point differs from the set point used when the previous SRT was executed. [1]
2. The difference between the temperature at the start of operation and the set point is greater than the larger of the following two: (Present proportional band $\times$ 1.27 + 4°C) and the ST stable range.	2. The set point change width is greater than the larger of the following two: (Present proportional band $\times$ 1.27 + 4°C) and the ST stable range.
3. The temperature at the start of operation is lower than the set point during reverse operation, and is larger than the set point during direct operation.	3. During reverse operation, the new set point is larger than the set point before the change; and during direct operation, the new set point is smaller than the set point before the change.
4. There is no reset from input errors.	4. The temperature is stable. [2] (Equilibrium with the output amount at 0% when the power is turned ON is also all right.)[3]

[1] The previous SRT-implemented set point is the set point that was used for calculating the PID constants for the previous SRT.

*2   In this state, the measurement point is within the ST stable range.
*3   In this state, the change width of the PV every 60 seconds is within the ST stable range or less.

In the following instances, PID constants are not changed by self-tuning (ST) for the present set point.
(1)   When the PID constants have been changed manually with ST set to ON.
(2)   When auto-tuning (AT) has been executed.
To execute self-tuning again after completing the above operations, set the ST parameter to OFF and then set it to ON again.

● **ST Stable Range**

The ST stable range determines the condition under which ST (self-tuning) functions.
This procedure sets the ST stable range to 20.0°C.

Operating Procedure

1 **Press the** 🔁 **Key several times in the Advanced Function Setting Level to display the** 5ᵗ-ᵇ **(ST Stable Range) parameter.**	Advanced Function Setting Level `5ᵗ-ᵇ` `15.0` ST Stable Range
2 **Press the** ⊼ **or** ⊻ **Key to set the value to 20.0.** The default is 15.0.	`5ᵗ-ᵇ` `20.0`

4-9-3   RT (Robust Tuning) (Used for AT or ST.) `000`

`Rᵗ`

• When AT or ST is executed with RT selected, PID constants are automatically set that make it hard for control performance to deteriorate even when the characteristics of the controlled object are changed.
• RT can be set in the Advanced Function Setting Level when PID control has been set.
• The RT mode cannot be selected while an analog input is set.
• Selecting the RT mode in the following cases will help to prevent hunting from occurring.
  • When the set temperature is not constant and is changed in a wide range
  • When there are large variations in ambient temperatures due to factors such as seasonal changes or differences between day and night temperatures
  • When there are large variations in ambient wind conditions and air flow
  • When heater characteristics change depending on the temperature
  • When an actuator with disproportional I/O, such as a phase-control-type power regulator, is used
  • When a rapidly heating heater is used
  • When the control object or sensor has much loss time
  • When hunting occurs in normal mode for any reason
    *   PID constants are initialized to the factory settings by switching to RT mode.
    *   When the RT mode is selected, the Integral/Derivative Time Unit parameter changes to 0.1 s.

● RT Features

- Even when hunting occurs for PID constants when AT or ST is executed in normal mode, it is less likely to occur when AT or ST is executed in RT mode.
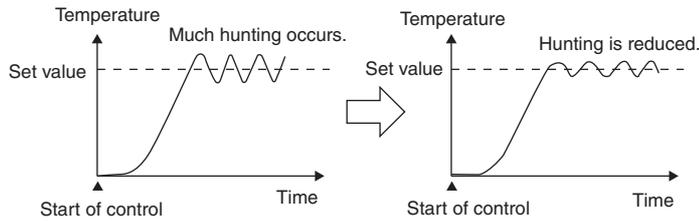

- When the temperature (PV) falls short of the set point for the PID constants when using AT or ST in normal mode, executing AT or ST in RT mode tends to improve performance.
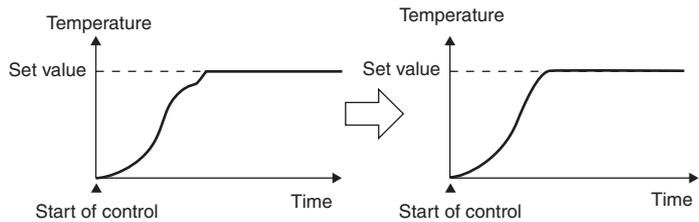

- When the manipulated variable (MV) is saturated, the amount of overshooting may be somewhat higher in comparison to PID control based on AT or ST in normal mode.

This procedure selects RT mode.

Operating Procedure

1 Press the ⊡ Key several times in the Advanced Function Setting Level to display *Rt* (RT: robust tuning).	Advanced Function Setting Level *Rt* *oFF* RT
2 Press the ⊙ or ⊙ Key to select *oN* (RT ON). The default is *oFF*.	*Rt* *oN*

4-9-4   Manual Setup

Individual PID constants can be manually set in the Proportional Band, Integral Time, and Derivative Time parameters in the Adjustment Level.

In this example, the Proportional Band parameter is set to 10.0, the Integral Time parameter to 250, and the Derivative Time parameter to 45.

Operating Procedure

• Setting the Proportional Band

1 **Press the ⊚ Key several times in the Adjustment Level to display the _P_ (Proportional Band) parameter.**	Adjustment Level _P_ 8.0 Proportional Band
2 **Press the ⊙ or ⊙ Key to set the value to 10.0.** The default settings are as follows: • Temperature input (°C or °F): 8.0 • Analog input (%FS): 10.0	_P_ 10.0

• Setting the Integral Time

1 **Press the ⊚ Key several times in the Adjustment Level to display the _Ī_ (Integral Time) parameter.**	Adjustment Level _Ī_ 233 Integral Time
2 **Press the ⊙ or ⊙ Key to set the value to 250.** The default settings are as follows: • Integral/Derivative Time Unit of 1 s: 233 • Integral/Derivative Time Unit of 0.1 s: 233.0	_Ī_ 250
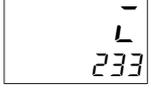

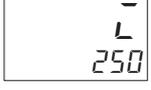

• Setting the Derivative Time

1 **Press the ⊚ Key several times in the Adjustment Level to display the _d_ (Derivative Time) parameter.**	Adjustment Level _d_ 40 Derivative Time
2 **Press the ⊙ or ⊙ Key to set the value to 45.** The default settings are as follows: • Integral/Derivative Time Unit of 1 s: 40 • Integral/Derivative Time Unit of 0.1 s: 40.0	_d_ 45

📝 Additional Information

Proportional Action
When PID constants I (integral time) and D (derivative time) are set to 0, control is executed according to proportional action. As the default, the center value of the proportional band becomes the set point.
Related parameter: Manual Reset Value (Adjustment Level)

When P (Proportional Band) Is Adjusted

Increased		The curve rises gradually, and a long stabilization time is created, but overshooting is prevented.
Decreased		Overshooting and hunting occur, but the set value is quickly reached and the temperature stabilizes.
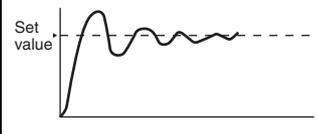

When I (Integral Time) Is Adjusted

Increased		It takes a long time to reach the set point. It takes time to achieve a stable state, but overshooting, undershooting, and hunting are reduced.
Decreased		Overshooting and undershooting occur. Hunting occurs. The Digital Controller starts up faster.
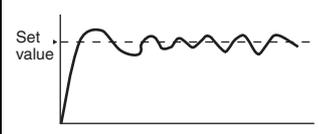

When D (Derivative Time) Is Adjusted

Increased		Overshooting, undershooting, and stabilization times are reduced, but fine hunting occurs on changes in the curve itself.
Decreased		Overshooting and undershooting increase, and it takes time to return to the set point.
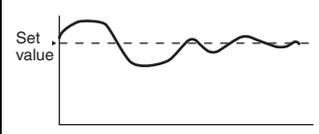

4-10 Alarm Outputs

- Alarms are output from auxiliary outputs. For relay outputs or voltage outputs (for driving SSRs), alarms can also be used by setting the Control Output 1 Assignment or Control Output 2 Assignment parameter to any of the alarms from alarm 1 to 4. The alarm output condition is determined by a combination of the alarm type, alarm value, alarm hysteresis, and the standby sequence. For details, refer to *4-11 Alarm Hysteresis*.
- This section describes the Alarm Type, Alarm Value, Upper-limit Alarm and Lower-limit Alarm parameters.

4-10-1 Alarm Types
ALt1 Alarm 1 Type

ALt2 Alarm 2 Type
ALt3 Alarm 3 Type
ALt4 Alarm 4 Type

- Set the alarm type independently for each alarm in the Alarm 1 to 4 Type parameters in the Initial Setting Level.
- The alarms that can be set are listed in the following table.
- You can use an LBA (12) only for alarm 1. You cannot use an LBA on a Position-proportional Model.
- If the Controller is equipped with HB/HS alarm detection, the default setting for the Auxiliary Output 1 Assignment is for heater alarms. Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To use alarm 1, set an output assignment to alarm 1. (Refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)*.)

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
0	Alarm function OFF	Output OFF		No alarm
1	Upper- and lower-limit*1	ON OFF L H SP PV	*2	Set the upward deviation in the set point for the alarm upper limit (H) and the lower deviation in the set point for the alarm lower limit (L). The alarm is ON when the PV is outside this deviation range.
2 (default)	Upper-limit	ON OFF X SP PV	ON OFF X SP PV	Set the upward deviation in the set point by setting the alarm value (X). The alarm is ON when the PV is higher than the SP by the deviation or more.
3	Lower-limit	ON OFF X SP PV	ON OFF X SP PV	Set the downward deviation in the set point by setting the alarm value (X). The alarm is ON when the PV is lower than the SP by the deviation or more.

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
4	Upper- and lower-limit range*1	ON OFF — L H — SP PV	*3	Set the upward deviation in the set point for the alarm upper limit (H) and the lower deviation in the set point for the alarm lower limit (L). The alarm is ON when the PV is inside this deviation range.
5	Upper- and lower-limit with standby sequence*1	ON OFF — L H — SP PV *5	*4	A standby sequence is added to the upper- and lower-limit alarm (1).*6
6	Upper-limit with standby sequence	ON OFF — X — SP PV	ON OFF — X — SP PV	A standby sequence is added to the upper-limit alarm (2).*6
7	Lower-limit with standby sequence	ON OFF — X — SP PV	ON OFF — X — SP PV	A standby sequence is added to the lower-limit alarm (3).*6
8	Absolute-value upper-limit	ON OFF — X — 0 PV	ON OFF — X — 0 PV	The alarm will turn ON if the process value is larger than the alarm value (X) regardless of the set point.
9	Absolute-value lower-limit	ON OFF — X — 0 PV	ON OFF — X — 0 PV	The alarm will turn ON if the process value is smaller than the alarm value (X) regardless of the set point.
10	Absolute-value upper-limit with standby sequence	ON OFF — X — 0 PV	ON OFF — X — 0 PV	A standby sequence is added to the absolute-value upper-limit alarm (8).*6
11	Absolute-value lower-limit with standby sequence	ON OFF — X — 0 PV	ON OFF — X — 0 PV	A standby sequence is added to the absolute-value lower-limit alarm (9).*6
12	LBA (alarm 1 type only)			*7
13	PV change rate alarm			*8
14	SP absolute-value upper-limit alarm	ON OFF — X — 0 SP	ON OFF — X — 0 SP	This alarm type turns ON the alarm when the set point (SP) is higher than the alarm value (X).
15	SP absolute-value lower-limit alarm	ON OFF — X — 0 SP	ON OFF — X — 0 SP	This alarm type turns ON the alarm when the set point (SP) is lower than the alarm value (X).
16	MV absolute-value upper-limit alarm*9	Standard Control ON OFF — X — 0 MV Heating/Cooling Control (Heating MV) ON OFF — X — 0 MV	Standard Control ON OFF — X — 0 MV Heating/Cooling Control (Heating MV) Always ON	This alarm type turns ON the alarm when the manipulated variable (MV) is higher than the alarm value (X).

4-10 Alarm Outputs

4

4-10-1 Alarm Types

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
17	MV absolute-value lower-limit alarm*9	Standard Control	Standard Control	This alarm type turns ON the alarm when the manipulated variable (MV) is lower than the alarm value (X).
		Heating/Cooling Control (Cooling MV)	Heating/Cooling Control (Cooling MV) Always ON	
18	RSP absolute-value upper-limit alarm *10 000			This alarm type turns ON the alarm when the remote SP (RSP) is higher than the alarm value (X).
19	RSP absolute-value lower-limit alarm *10 000			This alarm type turns ON the alarm when the remote SP (RSP) is lower than the alarm value (X).
*1   With set values 1, 4, and 5, the upper- and lower-limit values can be set independently for each alarm type, and are expressed as "L" and "H."

*2   Set value: 1 (Upper- and lower-limit alarm)

*3   Set value: 4 (Upper- and lower-limit range)

*4   Set value: 5 (Upper- and lower-limit alarm with standby sequence)
  • For the upper- and lower-limit alarms in cases 1 and 2 above, the alarm is always OFF if upper- and lower-limit hysteresis overlaps.
  • In case 3, the alarm is always OFF.

*5   Set value: 5 (Upper- and lower-limit alarm with standby sequence)
  • The alarm is always OFF if upper- and lower-limit hysteresis overlaps.

*6   Refer to *Standby Sequence Reset* on page 6-64 for information on the operation of the standby sequence.

*7   Refer to *5-11-1 Loop Burnout Alarm (LBA)*.

*8   Refer to *PV Change Rate Alarm* on page 4-36.

*9 When heating/cooling control is performed, the MV absolute-value upper-limit alarm functions only for the heating operation and the MV absolute-value lower-limit alarm functions only for the cooling operation.

*10 This value is displayed only when a remote SP input is used. It functions in both Local SP Mode and Remote SP Mode.

4-10-2 Alarm Values
$RL \ IL$	Alarm Lower Limit Value
$RL \ 2L$	
$RL \ 3L$	
$RL \ 4L$	

$RL \ IH$	Alarm Upper Limit Value
$RL \ 2H$	
$RL \ 3H$	
$RL \ 4H$	
$RL - I$	Alarm Value
$RL - 2$	
$RL - 3$	
$RL - 4$	
- Alarm values are indicated by "X" in the table on the previous page. When the upper and lower limits are set independently, "H" is displayed for upper limit values, and "L" is displayed for lower limit values.
- To set the alarm value upper and lower limits for deviation, set the upper and lower limits in each of the Alarm 1 to 4 Upper Limit, and Alarm 1 to 4 Lower Limit parameters in the Operation Level.

This procedure sets alarm 1 as an upper-limit alarm. The alarm is output when the process value (PV) exceeds the set point (SP) by 10°C. (In this example, the temperature unit is °C.)

Alarm 1 type = 2 (Upper-limit alarm)

Alarm value 1= 10

Operating Procedure

• Selecting the Alarm 1 Type

| **1** Press the ⊚ Key several times in the Initial Setting Level to display $RLE \ I$ (Alarm 1 Type).* | Initial Setting Level

$RLE \ I$ Alarm 1 Type
2 |
| **2** Press the ⊗ or ⊗ Key to set the set value to 2.
The default is 2 (upper-limit alarm). | $RLE \ I$
2 |

• Setting the Alarm Value

1 Press the ⟳ Key several times in the Operation Level to display *AL - 1* (Alarm Value 1).	Operation Level *AL - 1* Alarm Value 1 *0*
2 Press the ⟰ or ⟱ Key to set the set value to 10. The default is 10.	*AL - 1* *10*
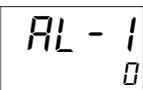

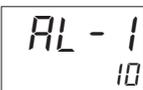

*   If the Controller is equipped with HB/HS alarm detection, the default setting for the Auxiliary Output 1 Assignment is for heater alarms. Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. To enable alarm 1, set an output assignment to alarm 1. For details, refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)*.

● PV Change Rate Alarm

The change width can be found for PV input values in any set period. Differences with previous values in each set period are calculated, and an alarm is output if the result exceeds the alarm value. The PV rate of change calculation period can be set in units of 50 ms.

If a positive value is set for the alarm value, the PV will operate as a change rate alarm in the rising direction. If a negative value is set, the PV will operate as a change rate alarm in the falling direction. When the alarm value is "0", PV charge rate alarm is disabled.

🖮 Precautions for Correct Use

If a shorter PV rate of change calculation period is set, outputs set for the PV change rate alarm function may repeatedly turn ON and OFF for a short period of time. It is therefore recommended that the PV change rate alarm be used with the alarm latch turned ON.
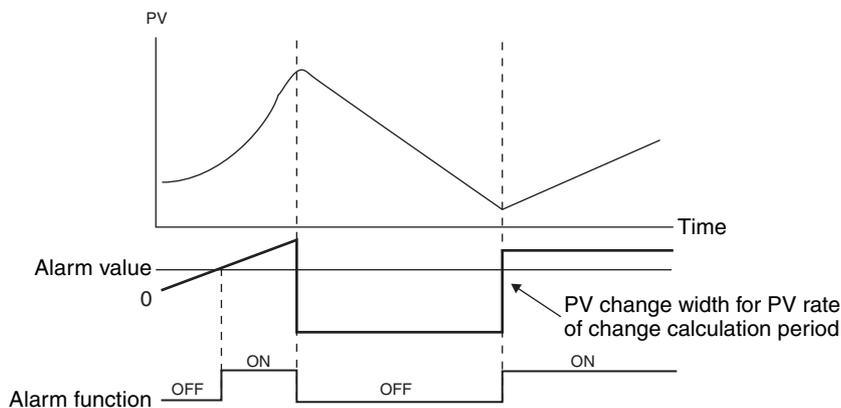

Parameter name	Setting range	Unit	Default
PV Rate of Change Calculation Period	1 to 999	Sampling cycle	20 (1 s)

● **SP Alarms**

You can set an SP absolute-value upper-limit or SP absolute-value lower-limit alarm for the set point (SP).

The alarm point is set in the corresponding alarm value parameter. The Alarm SP Selection parameter is used to specify the alarm for either the ramp SP or the target SP.

The corresponding alarm hysteresis setting is also valid.

SP absolute-value upper-limit alarm	SP absolute-value lower-limit alarm
Example: ON OFF ──0── → SP Upper-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) The alarm output is ON while the SP is equal to or higher than the set value.	Example: ON OFF ──0── → SP Lower-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) The alarm output is ON while the SP is equal to or lower than the set value.

● **MV Alarms**

You can set an MV absolute-value upper-limit or MV absolute-value lower-limit alarm for the manipulated value (MV).

The alarm point is set in the corresponding alarm value parameter. The corresponding alarm hysteresis setting is also valid.

MV absolute-value upper-limit alarm	MV absolute-value lower-limit alarm
Example for Standard Control: ON OFF ──0── → MV Upper-limit alarm point (e.g., 80%) Alarm value (e.g., 80%) The alarm output is ON while the MV is equal to or higher than the set value.	Example for Standard Control: ON OFF ──0── → MV Lower-limit alarm point (e.g., 20%) Alarm value (e.g., 20%) The alarm output is ON while the MV is equal to or lower than the set value.

● **RSP Alarms** `000`

You can set an RSP absolute-value upper-limit alarm or RSP absolute-value lower-limit alarm for the remote SP input.

The alarm point is set in the corresponding alarm value parameter. The corresponding alarm hysteresis setting is also valid.

RSP absolute-value upper-limit alarm	RSP absolute-value lower-limit alarm
Example: ON OFF ──0── → RSP Upper-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) The alarm output is ON while the remote SP is equal to or higher than the set value.	Example: ON OFF ──0── → RSP Lower-limit alarm point (e.g., 100°C) Alarm value (e.g., 100°C) The alarm output is ON while the remote SP is equal to or lower than the set value.

4-11   Alarm Hysteresis

- The hysteresis of alarm outputs when alarms are switched ON/OFF can be set as follows:
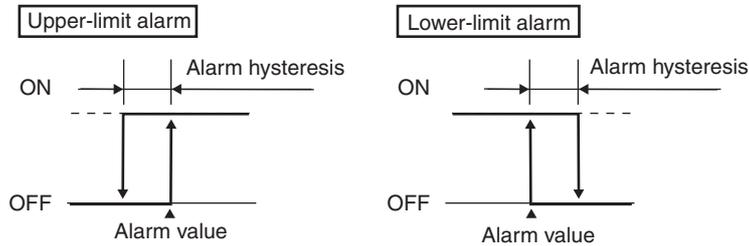

- Alarm hysteresis is set independently for each alarm in the Alarm 1 to 4 Hysteresis parameters (Initial Setting Level).
- For all alarms except for MV alarms, the default is 0.2 (°C/°F) for temperature inputs and 0.02% FS for analog inputs. The default is 0.50(%) for MV alarms.

4-11-1   Standby Sequence

- The standby sequence can be used so that an alarm will not be output until the process value leaves the alarm range once and then enters it again.
- For example, with a lower-limit alarm, the process value will normally be below the set point, i.e., within the alarm range, when the power supply is turned ON, causing an alarm to be output.
  If the lower-limit alarm with a standby sequence is selected, an alarm will not be output until the process value increases above the alarm set value, i.e., until it leaves the alarm range, and then falls back below the alarm set value.

● Restart

- The standby sequence is canceled when an alarm is output. It is, however, restarted later by the Standby Sequence Reset parameter (Advanced Function Setting Level). For details, refer to the Standby Sequence Reset parameter in *Section 6 Parameters*.

4-11-2 Alarm Latch

- The alarm latch can be used to keep the alarm output ON until the latch is canceled regardless of the temperature once the alarm output has turned ON.

Any of the following methods can be used to clear the alarm latch.
- Turn OFF the power supply. (The alarm latch is also cleared by switching to the Initial Setting Level, Communications Setting Level, Advanced Function Setting Level, or Calibration Level.)
- Use the PF Key.
- Use an event input.

For details on setting the PF Key, refer to *5-18 Setting the PF Key*. For details on setting events, refer to *5-4 Using Event Inputs*.

● Summary of Alarm Operation

The following figure summarizes the operation of alarms when the Alarm Type parameter is set to "lower-limit alarm with standby sequence" and "close in alarm" is set.

Alarm type: Lower-limit alarm with standby sequence
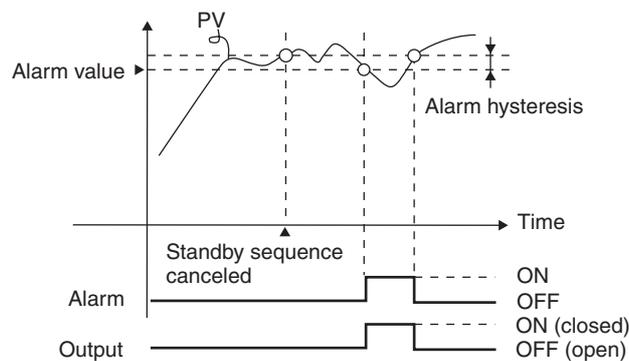

Parameters

Display	Parameter	Description	Level
RLH✳	Alarm 1 to 4 Hysteresis	Alarm	Initial Setting Level
RE5E	Standby Sequence	Alarm	Advanced Function Setting Level

*   ✳ = 1 to 4

4-12 Using Heater Burnout (HB) and Heater Short (HS) Alarms (Not Supported for Position-proportional Models.)

These functions are supported for models that detect heater burnout (HB) and heater short (HS) alarms.

4-12-1 HB Alarm

● What Is an HB Alarm?

An HB alarm is detected by measuring the heater current with a current transformer (CT) when the control output is ON. If the measured heater current is lower than the setting of the Heater Burnout Detection parameter, an alarm is output.
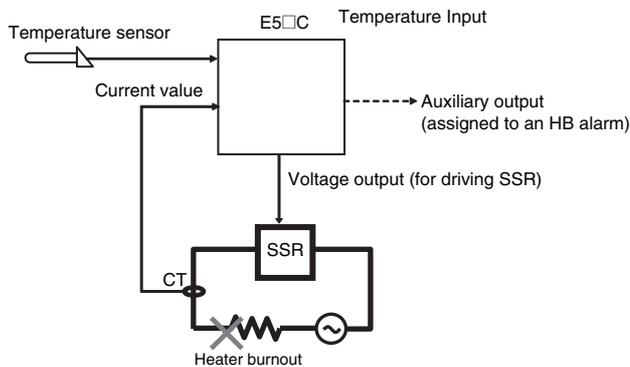

This alarm cannot be used for the cooling control output. The default setting for the Auxiliary Output 1 Assignment is for heater alarms. Therefore, the alarm 1 function is disabled and the Alarm 1 Type is not displayed. You can use the output assignment parameters to change the alarm output location. For details, refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)* on page 4-16. You can use an integrated alarm to output an OR of alarms 1 to 4 and the other alarms. For details on the integrated alarm, refer to *5-9 OR Output of Alarms*.

● Parameters

Parameter	No. 1 display	Value	No. 2 display	Level
HB ON/OFF	HbU	OFF or ON (default: ON)	oFF, oN	Advanced Function Setting Level
Heater Burnout Latch	HbL	OFF or ON (default: OFF)	oFF, oN	
Heater Burnout Hysteresis	HbH	0.1 to 50.0 A (default: 0.1 A)	0.1 to 50.0	
Heater Burnout Detection 1 or 2 (alarm current)	Hb1 Hb2	0.0 to 50.0 A (default: 0.0 A)	0.0 to 50.0	Adjustment Level
Heater Current 1 or 2 Value Monitor	Ct1 Ct2	0.0 to 55.0 A	0.0 to 55.0	
Auxiliary Output 1 to 4 Assignment	5Ub1 to 5Ub4	HB: HB alarm or HA: Heater alarm	Hb or HA	Advanced Function Setting Level

4   Basic Operation

4-12 Using Heater Burnout (HB) and Heater Short (HS) Alarms (Not Supported for Position-proportional Models.)

4

4-12-1 HB Alarm
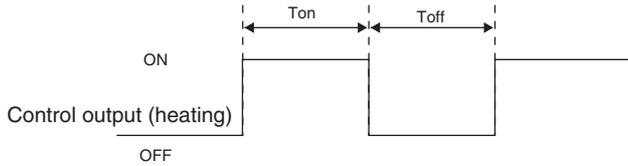

In the above diagram, power is considered to be ON (normal) if the heater current is greater than $Hb1$ or $Hb2$ (heater burnout detection current) during the Ton interval. The HB alarm will be OFF in this case. If the heater current is less than $Hb1$ or $Hb2$ (heater burnout detection current) during the Ton interval, the HB alarm will turn ON. Heater burnout is not detected if the ON time (Ton) for the control output for heating is 100 ms or less (30 ms or less if the control period is 0.1 or 0.2 s). Heater burnouts are not detected in the following cases.

- Turn ON the heater power supply simultaneously or before turning ON the E5□C power supply. If the heater power supply is turned ON after turning ON the E5□C power supply, the HB alarm will be output.
- Control will be continued even when there is an HB alarm.
- The rated current may sometimes differ slightly from the actual current flowing to the heater. Use the Heater Current 1 Value Monitor and Heater Current 2 Value Monitor parameters to check the current during actual operation

- If there is little difference between the current in normal and abnormal states, detection may be unstable. To stabilize detection, set a current difference of at least 1.0 A for heaters lower than 10.0 A, and at least 2.5 A for heaters of 10.0 A or higher. If the heater current is too low, loop the load line several times through a CT, as shown in the following diagram. Looping it through once will double the detected current.

Heater Burnout Detection 1/2 set value = $\dfrac{\text{(Normal current value + Burnout current value)} \times \text{Number of turns}}{2}$

Precautions for Correct Use

Due to UL Listing requirements, use the E54-CT1L or E54-CT3L Current Transformer with the factory wiring (internal wiring). Use a UL category XOBA or XOBA7 current transformer that is UL Listed for field wiring (external wiring) and not the factory wiring (internal wiring).

● **Operating Procedure**

Set the HB ON/OFF parameter in the Advanced Function Setting Level, and set the Heater Burnout Detection 1 parameter in the Adjustment Level.
Heater Burnout Detection 1 = 2.5

Operating Procedure
- Checking the HB ON/OFF Parameter Setting

1	Press the ⊙ Key several times in the Advanced Function Setting Level to display HbU (HB ON/OFF).	Advanced Function Setting Level
2	Check to see if the set value is oN (enabled, default).	

• Checking the Heater Current

	Adjustment Level
1 Press the ⊚ Key several times in the Adjustment Level to display *Ct 1* (Heater Current 1 Value Monitor).	*Ct 1* *0.0* Heater Current 1 Value Monitor
2 Check the heater current from the CT input that is used to detect heater burnout. The monitoring range is 0.0 to 55.0 A.	*Ct 1* *0.0*

• Setting Heater Burnout Detection

	Adjustment Level
1 Press the ⊚ Key several times in the Adjustment Level to display *Hb 1* (Heater Burnout Detection 1).	*Hb 1* *0.0* Heater Burnout Detection 1
2 Press the ⊙ or ⊙ Key to set the set value to 2.5 Refer to *4-12-4 Calculating Detection Current Values* when you set the value.	*Hb 1* *2.5*

4-12-2   HS Alarm

● What Is an HS Alarm?

An HS alarm is detected by measuring the heater current with a current transformer (CT) when the control output is OFF. If the measured heater current is higher than the setting of the HS Alarm parameter, an alarm is output.
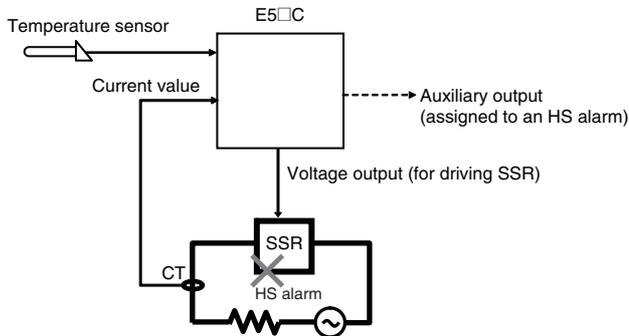

Control output (heating)	Power to heater	HS alarm output
OFF	Yes (HS alarm)	ON
	No (normal)	OFF

This alarm cannot be used for the cooling control output. With the default settings, the HS alarm is output on auxiliary output 1. You can use the output assignment parameters to change the output. You can use an integrated alarm to output an OR of alarms 1 to 4 and the other alarms. For details on the integrated alarm, refer to *5-9 OR Output of Alarms*.

4-12 Using Heater Burnout (HB) and Heater Short (HS) Alarms (Not Supported for Position-proportional Models.)

4

4-12-2 HS Alarm

● **Parameters**

Parameter	No. 1 display	Value	No. 2 display	Level
HS Alarm Use	HSU	OFF or ON (default: ON)	oFF, oN	Advanced Function Setting Level
HS Alarm Latch	HSL	OFF or ON (default: OFF)	oFF, oN	
HS Alarm Hysteresis	HSH	0.1 to 50.0 A (default: 0.1 A)	0.1 to 50.0	
HS Alarm 1 or 2 (alarm current)	HS1 HS2	0.0 to 50.0 A (default: 50.0 A)	0.0 to 50.0	Adjustment Level
Leakage Current 1 or 2 Monitor	LCR1 LCR2	0.0 to 55.0 A	0.0 to 55.0	
Auxiliary Output 1 to 4 Assignment	SUb1 to SUb4	HS: HS alarm or HA: Heater alarm	HS or HA	Advanced Function Setting Level
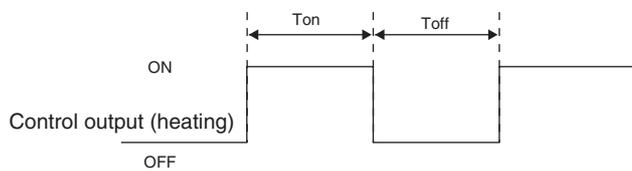

In the above diagram, power is considered to be OFF (normal) if the leakage current is less than HS1 or HS2 (heater short detection current) during the Toff interval. The HS alarm will be OFF in this case. If the leakage current is greater than HS1 or HS2 (heater short detection current) during the Toff interval, the HS alarm will turn ON. Heater short are not detected if the OFF time (Toff) for the control output for heating is 100 ms or less (35 ms or less if the control period is 0.1 or 0.2 s). Heater shorts are not detected in the following cases.

- Control will be continued even when there is an HS alarm.
- The rated current may sometimes differ slightly from the actual current flowing to the heater. Use the Leakage Current 1 Value Monitor and Leakage Current 2 Value Monitor parameters to check the leakage current during actual operation

Set the HS Alarm Use parameter to ON in the Advanced Function Setting Level and set the HS Alarm 1 parameter in the Adjustment Level.
This procedure sets the HS Alarm 1 parameter to 2.5.

Operating Procedure

- Setting the HS Alarm Use Parameter

1	**Press the ⊙ Key several times in the Advanced Function Setting Level to display HSU (HS Alarm Use).**	Advanced Function Setting Level HSU HS Alarm Use oN
2	**Check to see if the set value is oN (enabled, default).**	HSU oN

• Setting the Leakage Current Value Monitor

	Adjustment Level
1 **Press the ⊙ Key several times in the Adjustment Level to display** $LCR1$ **(Leakage Current 1 Value Monitor).**	$LCR1$ / 0.0 Leakage Current 1 Value Monitor
2 **Check the leakage current from the CT input that is used to detect heater short.** The monitoring range is 0.0 to 55.0 A.	$LCR1$ / 1.0

• Setting Heater Short Alarm Detection

	Adjustment Level
1 **Press the ⊙ Key several times in the Adjustment Level to display** $HS1$ **(HS Alarm 1).**	$HS1$ / 50.0 HS Alarm 1
2 **Press the ⊙ or ⊙ Key to set the set value to 2.5** Refer to *4-12-4 Calculating Detection Current Values* when you set the value.	$HS1$ / 2.5

• If there is little difference between the current in normal and abnormal states, detection may be unstable. To stabilize detection, set a current difference of at least 1.0 A for heaters lower than 10.0 A, and at least 2.5 A for heaters of 10.0 A or higher. If the heater current is too low, loop the load line several times through a CT, as shown in the following diagram. Looping it through once will double the detected current.

Load line

$$\text{HS Alarm 1/2 set value} = \frac{(\text{Leakage current value (output OFF)} + \text{HS current value}) \times \text{Number of turns}}{2}$$

Precautions for Correct Use

Due to UL Listing requirements, use the E54-CT1L or E54-CT3L Current Transformer with the factory wiring (internal wiring). Use a UL category XOBA or XOBA7 current transformer that is UL Listed for field wiring (external wiring) and not the factory wiring (internal wiring).

4-12-3   Installing Current Transformers (CT)

• CTs can be used for the heater burnout (HB) and heater short (HS) alarms.
For the E5CC, connect the CT in advance to terminals 16 and 17 (CT1), or 17 and 18 (CT2). For the E5CC-B, connect the CT in advance to terminals 21 and 22 (CT1). For the E5EC or E5AC, connect the CT in advance to terminals 19 and 20 (CT1) or 20 and 21 (CT2). For the E5EC-B, connect the CT in advance to terminals 25 and 26 (CT1). For the E5DC, E5DC-B or E5GC, connect the CT in advance to terminals 7 and 8 (CT1). Then pass the heater power line through the hole in the CT. For specifications, models, and dimensions of the CTs that can be used with the Digital Controller, refer to *A-2 Current Transformer (CT)*.

(1)   Single-phase Heaters

For single-phase heaters, install the CT in the position shown in the following diagram.

Load (such as a heater)

AC line

Product

To CT input
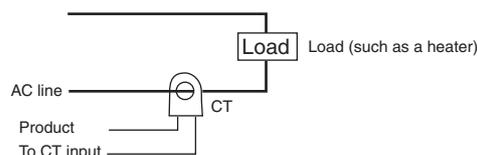

(2)   Three-phase Heaters

When a 3-phase power supply is used, regardless of the types of connecting lines, two current transformers (CTs) are required to detect heater burnouts and heater shorts.

4-12 Using Heater Burnout (HB) and Heater Short (HS) Alarms (Not Supported for Position-proportional Models.)

4

4-12-3 Installing Current Transformers (CT)

(a) Delta connecting lines: Refer to the following diagram for CT installation positions.

* Heater voltage fluctuations are not considered, so be sure to take that into account when setting the detection current.
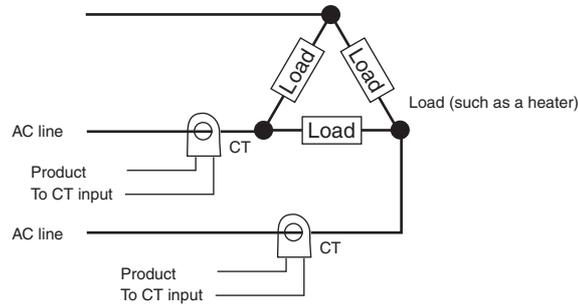

(b) Star connecting lines: Refer to the following diagram for CT installation positions.

* Heater voltage fluctuations are not considered, so be sure to take that into account when setting the detection current.

(c) V connecting lines: Refer to the following diagram for CT installation positions.

* Heater voltage fluctuations are not considered, so be sure to take that into account when setting the detection current.
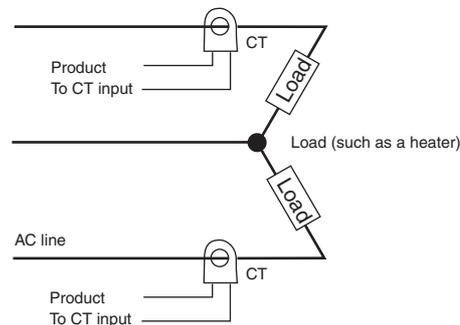

4-12-4   Calculating Detection Current Values

Calculate the set value using the following equation:

$$\text{Heater Burnout Detection 1/2 set value} = \frac{\text{Normal current value + Burnout current value}}{2}$$

$$\text{HS Alarm 1/2 set value} = \frac{\text{Leakage current value (output OFF) + HS current value}}{2}$$

- To set the current for heater burnout when two or more heaters are connected through the CT, use the value from when the heater with the smallest current burns out. If all of the heaters have the same current, use the value from when any one of them burns out.

$$\text{Example:} \quad \text{Heater Burnout Detection 1/2 set value} = \frac{\text{(Normal current value + Burnout current value)} \times \text{Number of turns}}{2}$$

- Make sure that the following conditions are satisfied:
  Heater with a current of less than 10.0 A:
  (Normal current value) − (Burnout current value) ≥ 1 A
  When the difference is less than 1 A, detection is unstable.
  Heater with a current of 10.0 A or more:
  (Normal current value) − (Burnout current value) ≥ 2.5 A
  When the difference is less than 2.5 A, detection is unstable.
- The setting range is 0.1 to 49.9 A. Heater burnouts and heater shorts are not detected when the set value is 0.0 or 50.0. When the set value is 0.0, the HB alarm is always OFF and the HS alarm is always ON. When the set value is 50.0, the HB alarm is always ON and the HS alarm is always OFF.
- Set the total current value for normal heater operation to 50 A or less. When a current value of 55.0 A is exceeded, $FFFF$ is displayed in the Heater Current 1 (or 2) Value Monitor and Leakage Current 1 (or 2) Monitor parameters.

4-12-5   Application Examples

(1)   Single-phase Heaters

Example: Using a 200-VAC, 1-kW Heater
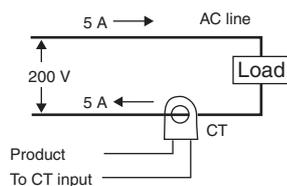

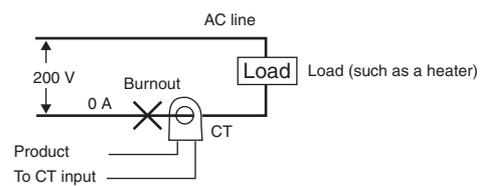

The heater power supply provides 5 A when the current is normal, and 0 A when there is a burnout, so the heater burnout detection current is calculated as follows:

$$\text{Heater burnout detection current} = \frac{\text{(Normal current) + (Heater burnout current)}}{2}$$

$$= \frac{5 + 0}{2} = 2.5 \text{ [A]}$$

4-12 Using Heater Burnout (HB) and Heater Short (HS) Alarms (Not Supported for Position-proportional Models.)

4

4-12-5 Application Examples

Example: Using Three 200-VAC, 1-kW Heaters
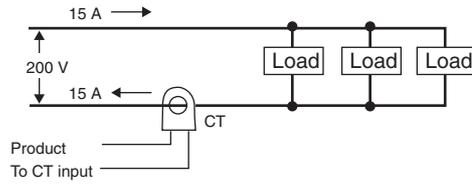

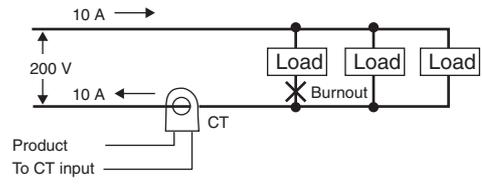

The heater power supply provides 15 A when the current is normal, and 10 A when there is a burnout, so the heater burnout detection current is calculated as follows:

$$\text{Heater burnout detection current} = \frac{(\text{Normal current}) + (\text{Heater burnout current})}{2}$$

$$= \frac{15 + 10}{2} = 12.5 \text{ [A]}$$

(2) Three-phase Heaters

(a) Delta Connecting Lines
Example: Using Three 200-VAC, 2-kW Heaters
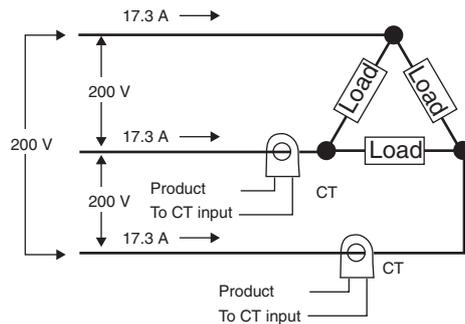

The current when each phase is normal is 17.3 A ($\approx \sqrt{3} \times 10$ A).
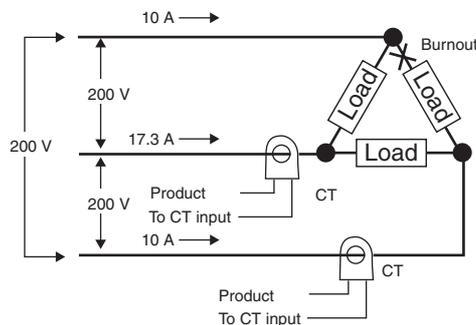

Current when there is a burnout = 10 A $\times \sqrt{3} \times (\sqrt{3}/2)$ = 15 A
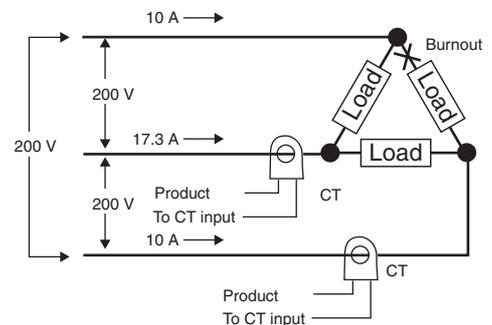

Current when there is a burnout = 10 A $\times \sqrt{3} \times (1/\sqrt{3})$ = 10 A

The heater burnout current when there is a burnout at the load line is as follows:
(Heater burnout detection current) = (17.3 + 15) / 2 = 16.15 [A]

The heater burnout current when there is a burnout at the load is as follows:

(Heater burnout detection current) = (17.3 + 10) / 2 = 13.65 [A]

To enable detection in either case, use 16.1 A as the heater burnout detection current.

(b) Star Connecting Lines

Example: Using Three 200-VAC, 2-kW Heaters
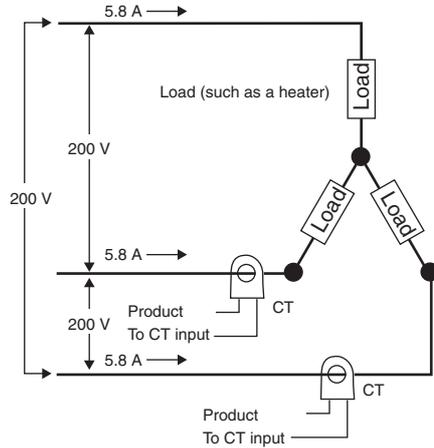

Normal

The current when each phase is normal is 5.8 A ($\approx$ 10 A $\times$ (1 /$\sqrt{3}$)).

Normal
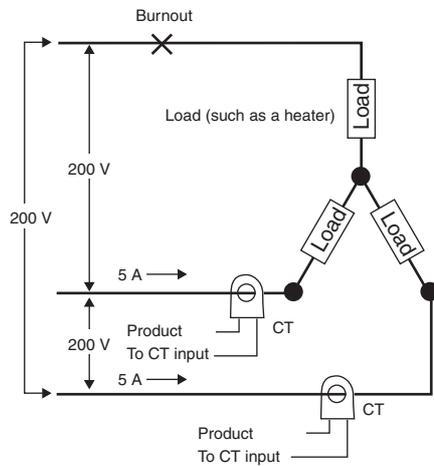

Burnout

Current when there is a burnout =
10 A $\times$ (1/ $\sqrt{3}$) $\times$ ($\sqrt{3}$/2) = 5 A

Current when there is a burnout =
10 A $\times$ (1/ $\sqrt{3}$) $\times$ ($\sqrt{3}$/2) = 5 A

The heater burnout detection current for this connecting line is 5.4 A (= (5.8 + 5) / 2).

4-12 Using Heater Burnout (HB) and Heater Short (HS) Alarms (Not Supported for Position-proportional Models.)

4

4-12-5 Application Examples

(c) V Connecting Lines
Example: Using Two 200-VAC, 2-kW Heaters
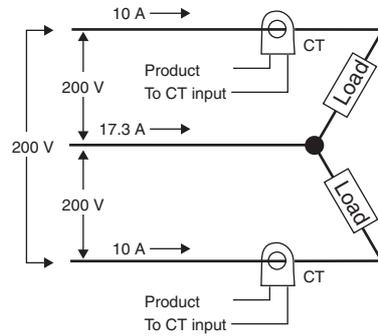

Normal

Normal
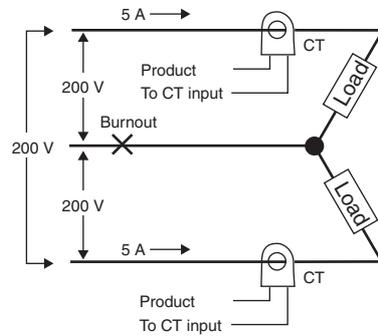

Current when there is a burnout =
10 A × (1/2) = 5 A

Burnout
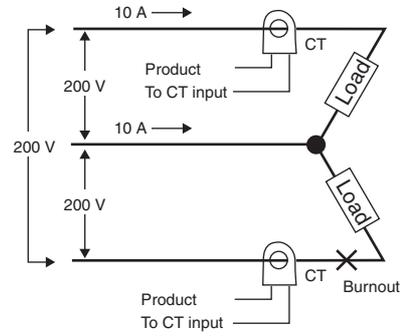

Current when there is a burnout = 0 A

The heater burnout current when there is a burnout at the common is as follows:
Heater burnout detection current = (10 + 5) / 2 = 7.5 [A]

The heater burnout current when there is a burnout at the load is as follows:
Heater burnout detection current = (10 + 0) / 2 = 5 [A]

To enable detection in either case, use 7.5 A as the heater burnout detection current.

4-13 Customizing the PV/SP Display

The following table shows the contents of the No. 1, 2, and 3 displays, according to the setting of the PV/SP Display Screen Selection parameter.

4-13-1 PV/SP Display Selections

The following table shows the contents of the No. 1, 2, and 3 displays, according to the setting of the PV/SP Display Screen Selection parameter in the Advanced Function Setting Level.

Set value	No. 1 display	No. 2 display	No. 3 display (E5EC, E5EC-B, and E5AC Only)
0	Nothing is displayed.	Nothing is displayed.	Nothing is displayed.
1	PV	SP	Nothing is displayed.
2	PV	Nothing is displayed.	Nothing is displayed.
3	SP	SP (character display)	Nothing is displayed.
4	PV	SP	MV (Valve opening for Position-proportional Models)
5	PV	SP	Multi-SP No.
6	PV	SP	Soak Time Remain 000
7	PV	SP	Internal Set Point (ramp SP)
8	PV	SP	Alarm Value 1*

*　The set value of the Alarm Value 1 parameter is displayed even if it is not valid due to the setting of the Alarm 1 Type parameter.

	Monitoring range	Unit
PV	Temperature input: The specified range for the specified sensor. Analog input: Scaling lower limit −5%FS to Scaling upper limit +5%FS	EU

	Setting (monitoring) range	Unit
SP	SP lower limit to SP upper limit	EU

During temperature input, the decimal point position depends on the currently selected sensor, and during analog input it depends on the Decimal Point parameter setting.

PV/SP Display Selections

Code	Parameter	Default	Level
SPd1	PV/SP No. 1 Display Selection	4*	Advanced Function Setting Level
SPd2	PV/SP No. 2 Display Selection	0	

*　The default is 1 for models other than the E5□C-□-0□.

● **MV Displays for Heating and Cooling Control (Not Supported for Position-proportional Models.)**
Select either the manipulated variable for heating or the manipulated variable for cooling as the MV to be displayed for PV/SP/MV during heating and cooling control. The MV Display Selection parameter is displayed only when heating/cooling control is being performed and PV/SP/MV is selected in the PV/SP Display Screen parameter or a Monitor/Setting Item Display parameter.

Code	Parameter	Set value	Displayed value	Level
ōd5L	MV Display Selection	ō	MV (heating)	Advanced Function Setting Level
		[-ō	MV (cooling)	

5

Advanced Operations

5-1 Shifting Input Values

● **Shifting Inputs**

You can set the Process Value Slope Coefficient and Process Value Input Shift parameters to compensate the PV.

Parameter	Setting range	Unit	Default
Process Value Input Shift	Temperature input: −199.9 to 999.9	°C or °F	0.0
	Analog input: −1,999 to 9,999	EU	0
Process Value Slope Coefficient `000`	0.001 to 9.999	None	1.000

• Calculating the Process Value Slope Coefficient and Process Value Input Shift
  In the following equation, PVi is the input to the calculation, PVo is the result, INRT is the process value slope coefficient, and INS is the process value input shift: PVo = (PVi × INRT) + INS

● **Moving Average**

• The moving average operation reduces sudden changes in the input due to noise and other factors, and can be enabled separately for each input.
• The Moving Average Count parameter is used for the moving average. It can be set to OFF, 2, 4, 8, 16, or 32.
• The default is OFF (disabled).
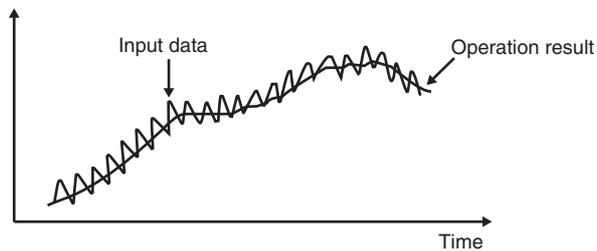

Parameter	Setting range	Unit	Default
Moving Average Count	OFF, 2, 4, 8, 16, or 32	Times	OFF*

* The default is 8 for models other than the E5☐C-☐-0☐.

● **Using the PV Input Shift**

After shifting

1000°C

970°C .... 1,000°C is shifted to 970°C.

500°C is shifted to 550°C.

550°C

500°C

−200°C   500°C   1000°C   1300°C   Before shifting
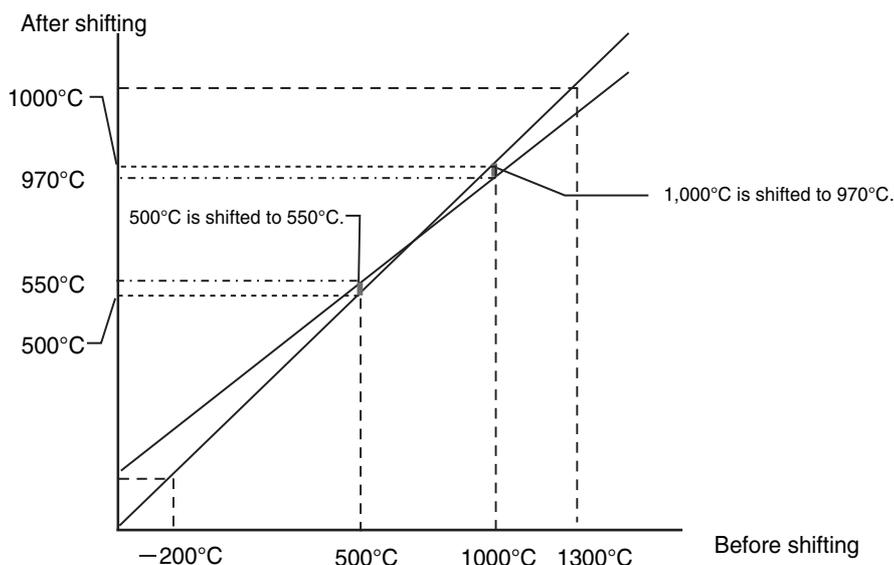

(1)   Find the two points to shift and determine the PVs after the shifts are applied.
Example: Shift 500°C (temperature before shifting) to 550°C (temperature after shifting).
Example: Shift 1,000°C (temperature before shifting) to 970°C (temperature after shifting).

(2)   Find the process value slope coefficient from the above results.
$(970 − 550) / (1,000 − 500) = 0.840$
  * Do not yet set the Process Value Slope Coefficient parameter in the Digital Controller.

(3)   Adjust the PV display on the Digital Controller to the point to be shifted.
Example: Adjust the PV to 500°C.

(4)   Set the Process Value Slope Coefficient parameter to the value that you found in step 2.
Example: Set the Process Value Slope Coefficient parameter to 0.840.

(5)   Read off the PV after the setting is changed.
Example: The PV will be displayed as 420°C.

(6)   Find the difference between the anticipated PV (i.e., the PV after shifting) and the PV that you read off in step 5.
Example: $550°C − 420°C = 130°C$

(7)   Set the Process Value Input Shift parameter to the value that you found in step 6.
Example: Set the Process Value Input Shift parameter to 130°C.

5-2 Setting Scaling Upper and Lower Limits for Analog Inputs

● Analog Input

`[N-H`	Scaling Upper Limit
`[N-L`	Scaling Lower Limit
`dP`	Decimal Point

- When an analog input is selected, scaling can be performed as needed by the control application.
- Scaling is set in the Scaling Upper Limit, Scaling Lower Limit, and Decimal Point parameters (Initial Setting Level). These parameters cannot be used when a temperature input is selected.
- The Scaling Upper Limit parameter sets the physical quantity to be expressed by the upper limit value of input, and the Scaling Lower Limit parameter sets the physical quantity to be expressed by the lower-limit value of input. The Decimal Point parameter specifies the number of digits below the decimal point.
- The following figure shows a scaling example for a 4 to 20 mA input. After scaling, the temperature can be directly read. Here, one place below the decimal point is set.

Display (temperature)

Upper limit (95.0%)

Lower limit (10.0%)

Input (mA)

4

20
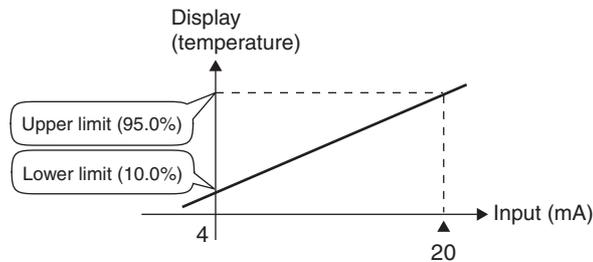

In this example scaling is set to display 4 to 20 mA as 10.0% to 95.0%.

Operating Procedure

- Setting the Input Type

1	Move to the Initial Setting Level. `[N-t` (Input Type) will be displayed.	Initial Setting Level `[N-t` `5` Input Type
2	Press the ⌃ or ⌄ Key to set the value to 25. The default is 5.	`[N-t` `25`

- Setting the Scaling Upper Limit

1	Press the ⟲ Key several times in the Initial Setting Level to display `[N-H` (Scaling Upper Limit).	Initial Setting Level `[N-H` `100` Scaling Upper Limit
2	Press the ⌃ or ⌄ Key to set the value to 950. The default is 100.	`[N-H` `950`

• Setting the Scaling Lower Limit

1	**Press the ⏎ Key several times in the Initial Setting Level to display *∟N-∟* (Scaling Lower Limit).**	Initial Setting Level $\overline{\text{L}}$ N - L 0 Scaling Lower Limit
2	**Press the ⏶ or ⏷ Key to set the value to 100.** The default is 0.	$\overline{\text{L}}$ N - L 100

• Setting the Decimal Point

1	**Press the ⏎ Key several times in the Initial Setting Level to display *dP* (Decimal Point).**	Initial Setting Level dP Decimal Point 0
2	**Press the ⏶ or ⏷ Key to set the value to 1.** The default is 0.	dP 1

5 Advanced Operations

5-3 Executing Heating/Cooling Control (Not Supported for Position-proportional Models.)

5

5-3-1 Heating/Cooling Control

5-3 Executing Heating/Cooling Control (Not Supported for Position-proportional Models.)

5-3-1 Heating/Cooling Control

Heating/cooling control can be used with control output 2 and auxiliary outputs 1 to 4. Heating/cooling control operates when H-C (heating/cooling) is selected for the Standard or Heating/Cooling parameter. The following functions are assigned to outputs in the default status.

Parameter name	Display	Initial status
Control Output 1 Assignment	$\bar{o}Ut1$	Control output for heating
Control Output 2 Assignment (E5CC, E5EC, and E5AC only)	$\bar{o}Ut2$	Not assigned.
Auxiliary Output 1 Assignment	$SUb1$	Alarm 1[*1]
Auxiliary Output 2 Assignment	$SUb2$	Alarm 2
Auxiliary Output 3 Assignment (E5CC, E5EC, E5EC-B, and E5AC Only)	$SUb3$	Alarm 3
Auxiliary Output 4 Assignment (E5EC, E5EC-B, and E5AC Only)	$SUb4$	Alarm 4

Each output assignment is automatically initialized as shown below when changing between standard and heating/cooling control.

Assigned Output Functions

Digital Controllers with Three or Fewer Auxiliary Outputs

Parameter name	Display	Without control output 2		With control output 2	
		Standard	Heating/cooling	Standard	Heating/cooling
Control Output 1 Assignment	$\bar{o}Ut1$	Control output (heating)	Control output (heating)	Control output (heating)	Control output (heating)
Control Output 2 Assignment	$\bar{o}Ut2$	---	---	Not assigned.	Control output (cooing)
Auxiliary Output 1 Assignment	$SUb1$	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]
Auxiliary Output 2 Assignment	$SUb2$	Alarm 2	Control output (cooing)[*2]	Alarm 2	Alarm 2
Auxiliary Output 3 Assignment	$SUb3$	Alarm 3	Alarm 3	Alarm 3	Alarm 3

Digital Controllers with Four Auxiliary Outputs

Parameter name	Display	Without control output 2		With control output 2	
		Standard	Heating/cooling	Standard	Heating/cooling
Control Output 1 Assignment	$\bar{o}Ut1$	Control output (heating)	Control output (heating)	Control output (heating)	Control output (heating)
Control Output 2 Assignment	$\bar{o}Ut2$	---	---	Not assigned.	Control output (cooing)

Parameter name	Display	Without control output 2		With control output 2	
		Standard	Heating/cooling	Standard	Heating/cooling
Auxiliary Output 1 Assignment	ᔍᚒᒃ �*I*	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]	Alarm 1[*1]
Auxiliary Output 2 Assignment	ᔍᚒᒃ2	Alarm 2	Alarm 2	Alarm 2	Alarm 2
Auxiliary Output 3 Assignment	ᔍᚒᒃ3	Alarm 3	Alarm 3	Alarm 3	Alarm 3
Auxiliary Output 4 Assignment	ᔍᚒᒃ4	Alarm 4	Control output (cooing)	Alarm 4	Alarm 4

*1 If the Digital Controller is equipped with HB/HS alarm detection, it is set by default to *HR* (Heater Alarm). If the Program Pattern parameter is changed to a setting other than OFF, the Auxiliary Output 1 Assignment parameter is set as the program end output.

*2 When heating/cooling control is used on the E5GC, auxiliary output 1 is the control output for cooling.

- The heating/cooling operation of the control outputs will switch when the Direct/Reverse Operation parameter is set to direct operation.
- When DRS (Invert Direct/Reverse Operation) is set for an Event Input Assignment 1 to 6 parameter, control will start with the opposite of the setting of the Direct/Reverse Operation parameter when the event input turns ON. When the event input turns OFF, control will return to operation according to the setting of the Direct/Reverse Operation parameter. For details on event inputs and control combined with the Direct/Reverse Operation parameter, refer to *Control by Inverting Direct/Reverse Operation* on page 5-13.
- If heating/cooling control is selected, also set the Dead Band, Proportional Band (Cooling), Integral Time (Cooling), Derivative Time (Cooling), and Heating/Cooling Tuning Method parameters.

● Dead Band

- For heating/cooling control, the dead band is set with the set point as its center. The dead band width is the set value of the Dead Band parameter (Adjustment Level). Setting a negative value produces an overlapping band.
- If an overlapping band is set, the bumpless function may not operate when switching between manual operation and automatic operation.
- The default is 0.0 EU for Digital Controllers with Temperature Inputs and 0.00% FS for Digital Controllers with Analog Inputs.

5   Advanced Operations

5-3 Executing Heating/Cooling Control (Not Supported for Position-proportional Models.)

5

5-3-1 Heating/Cooling Control
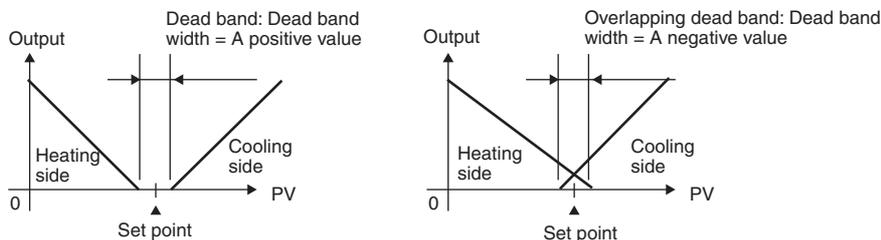

● **Heating/Cooling PID Control**

If heating/cooling PID control is used, you can set PID control separately for heating and cooling. The PID constants for both heating and cooling can be automatically set according to the cooling control characteristics by setting the Heating/Cooling Tuning Method parameter and then performing autotuning (AT).

Parameter	Setting range	Default	Level
Heating/Cooling Tuning Method	0: Same as heating control	0	Advanced Function Setting Level
	1: Linear		
	2: Air cooling		
	3: Water cooling		

Parameter	Setting range		Unit	Default	Level
Proportional Band (Cooling)	Temperature input	0.1 to 999.9	°C or °F	8.0	Adjustment Level
	Analog input		%FS	10.0	
Integral Time (Cooling)*	Integral/Derivative Time Unit of 1 s	0 to 9999	Seconds	233	
	Integral/Derivative Time Unit of 0.1 s	0.0 to 999.9	Seconds	233.0	
Derivative Time (Cooling)*	Integral/Derivative Time Unit of 1 s	0 to 9999	Seconds	40	
	Integral/Derivative Time Unit of 0.1 s	0.0 to 999.9	Seconds	40.0	

*   The unit is determined by the setting of the Integral/Derivative Time Unit parameter. The Proportional Band (Cooling), Integral Time (Cooling), and Derivative Time (Cooling) parameters are initialized if the Integral/Derivative Time Unit parameter is changed.

Air Cooling/Water Cooling Tuning

Control that is suitable for an application that does not have linear cooling characteristics (such as plastic molding machines) is performed. The response is fast and the response characteristics are stable.

Linear Tuning

Control that is suitable for an application that has linear cooling characteristics is performed.

Cooling Characteristics
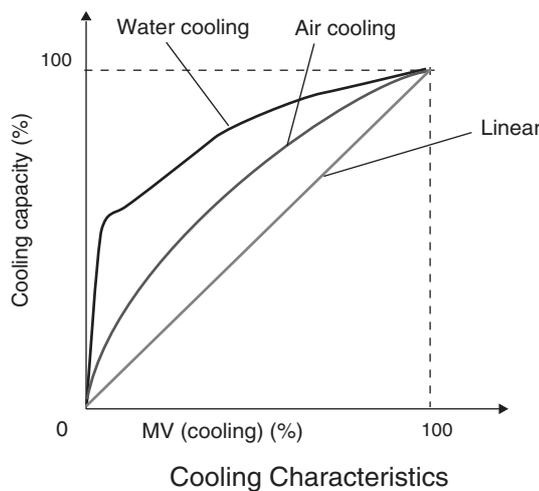

● **Three-position Control**

- Set the PID ON/OFF parameter to $\bar{o}N\bar{o}F$ and set the Standard or Heating/Cooling Parameter to $H\text{-}\bar{C}$ to perform three-position control.
- A dead band (an area where the MV is 0) can be set for either heating or cooling control.

Reverse operation
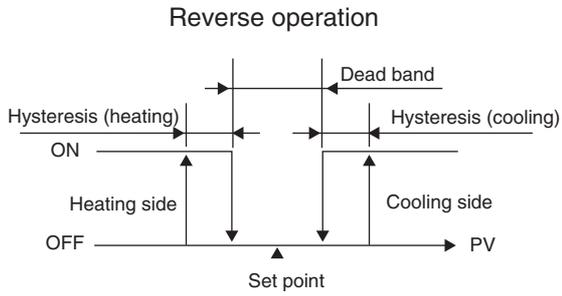

5-4   Using Event Inputs

5-4-1   Event Input Settings

- Events can be used on models that have event inputs.
  The number of event inputs that is supported depends on the model of the Digital Controller.
  E5EC/E5EC-B/E5AC: Up to 6 event inputs
  E5CC: Up to 4 event inputs
  E5GC/E5CC-B: Up to 2 event inputs
  E5DC: Up to 1 event input
  *   The E5DC-B does not have models with event inputs.
- Event inputs can be used for switching between RUN and STOP, switching between automatic and manual operation, starting/resetting the program, inverting direct/reverse operation, switching the SP mode, executing/canceling 100% AT, executing/canceling 40% AT, enabling/disabling setting changes, enabling/disabling communications write, canceling the alarm latch, and switching the multi-SP number.

5-4-2   How to Use the Multi-SP Function

The multi-SP function allows you to set up to eight set points (SP 0 to 7) in the Adjustment Level. The set point can be switched by operating the keys on the front panel or by using external input signals (event inputs).

● Using Event Inputs

The following table shows the relationships between the ON/OFF status of multi-SP number switching bits 0 to 2 and the set point.

Selected set point	Multi-SP No. switching bits		
	Bit 0	Bit 1	Bit 2
SP 0	OFF	OFF	OFF
SP 1	ON	OFF	OFF
SP 2	OFF	ON	OFF
SP 3	ON	ON	OFF
SP 4	OFF	OFF	ON
SP 5	ON	OFF	ON
SP 6	OFF	ON	ON
SP 7	ON	ON	ON

Note: Any bits that are not assigned to event inputs are treated as being OFF.

● Using Key Operations

You can select any of the set points 0 to 7 by changing the set value of the Multi-SP Uses parameter. The Multi-SP Uses parameter display conditions are as follows:
- Digital Controllers without event inputs for which the Number of Multi-SP Points parameter is not set to OFF
- Digital Controllers with event inputs for which the Number of Multi-SP Points parameter is not set to OFF and the Event Input Assignment 1 to 6 parameters are not set to Multi-SP switching bits 0 to 2

The following table shows the relationship between the Multi-SP Uses parameter set value and the selected set point

Multi-SP	Selected set point
0	SP 0
1	SP 1
2	SP 2
3	SP 3
4	SP 4
5	SP 5
6	SP 6
7	SP 7

Note: The set point can also be switched using communications.

5-4-3   Operation Commands Other than Multi-SP

The following table shows the functions that can be assigned when an Event Input Assignment 1 or 6 parameter is displayed.

Setting	Function
NoNE	None
StoP	RUN/STOP[5]
MANU	Auto/Manual[5]
PRSt	Program Start[1]
dRS	Invert Direct/Reverse Operation
RSP	SP mode switch[2]
At-2	100% AT Execute/Cancel[5]
At-1	40% AT Execute/Cancel[3][5]
WtPt	Setting Change Enable/Disable
CMWt	Communications Write Enable/Disable[4]
LAt	Alarm Latch Cancel[5]
MSP0	Multi-SP No. switching bit 0
MSP1	Multi-SP No. switching bit 1
MSP2	Multi-SP No. switching bit 2

[1]   PRST (Program Start) can be set even when the Program Pattern parameter is set to OFF, but the function will be disabled.

[2]   This function can be set only for a Digital Controller that supports a remote SP input.

[3]   This function can be set for heating/cooling control or for floating control for Position-proportional Models, but the setting will be disabled.

[4]   This function can be set only for a Digital Controller that supports communications. Also, when a work bit is selected as the event input data, Communications Write Enable/Disable cannot be assigned.

[5]   If the same function is assigned to PF Key, it will be disabled for the PF Key and only the event input can be used to execute the function.

Turn event inputs ON and OFF while the power is being supplied. Event input ON/OFF changes are detected for inputs of 50 ms or longer.

The functions are described in detail below.

● **Executing Run/Stop Control**

When the Event Input Assignment parameter is set to STOP (RUN/STOP), control is started when event input turns OFF. Control is stopped when the input turns ON. Alarm outputs, however, will be according to the process value.

The STOP indicator will light while control is stopped.

Setting	Input contact	Status
Event input	ON	STOP
Event input	OFF	RUN

● **Switching between Auto and Manual Control**

When the Event Input Assignment parameter is set to MANU (auto/manual), manual control will start when event input turns ON. Auto control will start when the input turns OFF.
The MANU indicator will light during manual control.

Setting	Input contact	Status
Event input	OFF	Automatic
Event input	ON	Manual

● **Controlling the Start of the Simple Program Function 000**

When the Event Input Assignment parameter is set to PRST (program start), the program will start when the event input turns ON. The program will be reset when the input turns OFF and the RUN/STOP status will automatically switch to STOP mode. If the program END output is ON, the program END output will turn OFF.

Setting	Input contact	Status
Event input	OFF	Reset
Event input	ON	Start

● **Control by Inverting Direct/Reverse Operation**

When the Event Input Assignment parameter is set to DRS (Invert Direct/Reverse Operation) and the Direct/Reverse Operation parameter is set for reverse operation, control starts with direct operation (cooling control) when the event input turns ON and control starts with reverse operation (heating control) when the event input turns OFF.

Setting	Input contact	Direct/Reverse Operation parameter	Status
Event input	OFF	Direct operation (cooling)	Direct operation (cooling)
		Reverse operation (heating)	Reverse operation (heating)
Event input	ON	Direct operation (cooling)	Reverse operation (heating)
		Reverse operation (heating)	Direct operation (cooling)

● **Switching the SP Mode**

When the Event Input Assignment parameter is set to RSP (SP mode switch), operation with a remote SP will start when the event input turns ON. Operation with a local SP will start when the event input turns OFF. The RSP operation indicator will light during Remote SP Mode.

Setting	Input contact	Status
Event input	OFF	Local SP
Event input	ON	Remote SP

● **Switching 100% AT Execute/Cancel**

When the Event Input Assignment parameter is set to AT-2 (100% AT Execute/Cancel), 100% AT will be executed when the event input turns ON and will be cancelled when the input turns OFF.

Setting	Input contact	Status
Event input	OFF	100% AT cancelled

Setting	Input contact	Status
Event input	ON	100% AT executed

● **Switching 40% AT Execute/Cancel**

When the Event Input Assignment parameter is set to AT-1 (40% AT Execute/Cancel), 40% AT will be executed when the event input turns ON and will be cancelled when the input turns OFF.

Setting	Input contact	Status
Event input	OFF	40% AT cancelled
Event input	ON	40% AT executed

● **Switching Setting Change Enable/Disable**

When the Event Input Assignment parameter is set to WTPT (Setting Change Enable/Disable), the setting change will be disabled when the event input turns ON and will be enabled when the input turns OFF.

Setting	Input contact	Status
Event input	OFF	Enabled
Event input	ON	Disabled

● **Switching Communications Write Enable/Disable**

When the Event Input Assignment parameter is set to CMWT (Setting Change Enable/Disable), writing with communications will be enabled when the event input turns ON and writing with communications will be disabled when the event input turns OFF.

Setting	Input contact	Status
Event input	OFF	Disabled
Event input	ON	Enabled

● **Switching Alarm Latch Cancel**

When the Event Input Assignment parameter is set to LAT (Alarm Latch Cancel), all alarm latches (alarms 1 to 4, heater burnout, HS alarm, latch) will be cancelled when event input turns ON.

Setting	Input contact	Status
Event input	OFF	---
Event input	ON	Cancelled

Parameters

Display	Parameter	Description	Level
EV-1	Event Input Assignment 1	Function of event input	Initial Setting Level
EV-2	Event Input Assignment 2		Initial Setting Level
EV-3	Event Input Assignment 3		Initial Setting Level
EV-4	Event Input Assignment 4		Initial Setting Level
EV-5	Event Input Assignment 5		Initial Setting Level
EV-6	Event Input Assignment 6		Initial Setting Level
MSPU	Number of Multi-SP Points		Advanced Function Setting Level

5-5   Setting the SP Upper and Lower Limit Values

5-5-1   Set Point Limiter

The setting range of the set point is limited by the set point limiter. This function can be used to prevent setting incorrect set points. The upper- and lower-limit values of the set point limiter are set using the Set Point Upper Limit and Set Point Lower Limit parameters in the Initial Setting Level. If the set point is not within the range set for the set point limiter as the result of changes to the Set Point Upper Limit or Set Point Lower Limit parameter, the set point will automatically be changed to a value within the set range. When the set point limiter is reset, the set point is forcibly changed to the upper- or lower-limit value of the set point limiter if the set point is out of the limiter range. Also, when the input type and the temperature unit, scaling upper-limit value, or lower-limit value are changed, the set point limiter is forcibly reset to the input setting range or the scaling upper- or lower-limit value.
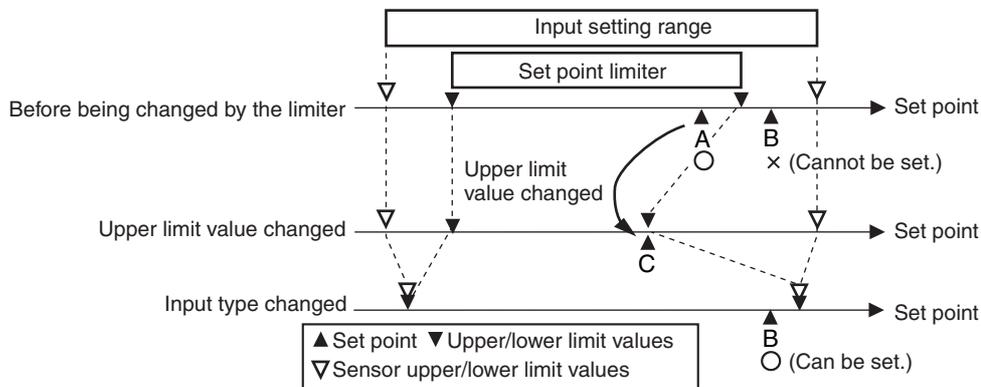

Parameters

Parameters	Parameter	Description	Level
5L -H	Set Point Upper Limit	To limit the SP setting	Initial Setting Level
5L -L	Set Point Lower Limit	To limit the SP setting	Initial Setting Level

5-5-2   Setting

Set the set point upper and lower limits in the Set Point Upper Limit and Set Point Lower Limit parameters in the Initial Setting Level. In this example, it is assumed that the input type is set to a K thermocouple with a temperature range of −200 to 1300°C.

```
−200                                                1300
    ┌──────────────────────────────────────┐
    │         Input setting range           │
    └──────────────────────────────────────┘
         ┌────────────────────────────┐
         │      Set point limiter      │
         └────────────────────────────┘
   −100                              1000
```
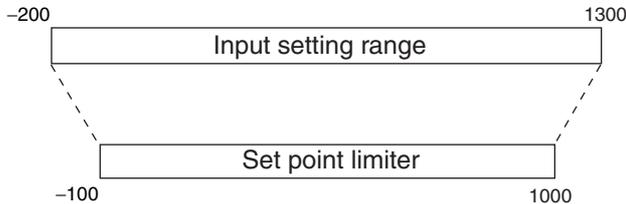

Set the upper and lower limits for the set point.

Set Point Upper Limit = 1000

Set Point Lower Limit = −100

Operating Procedure

• Setting the Set Point Upper Limit

1	Press the ⟳ Key several times in the Initial Setting Level to display $5L$-H (Set Point Upper Limit).	Initial Setting Level $5L$-H Set Point Upper-limit 1300
2	Press the ⌃ or ⌄ Key to set the value to 1000. The default is 1300.	$5L$-H 1000

• Setting the Set Point Lower Limit

1	Press the ⟳ Key several times in the Initial Setting Level to display $5L$-L (Set Point Lower Limit).	Initial Setting Level $5L$-L Set Point Lower Limit -200
2	Press the ⌃ or ⌄ Key to set the value to −100. The default is −200.	$5L$-L -100

5-6   Using the SP Ramp Function to Limit the SP Change Rate

5-6-1   SP Ramp

The SP ramp function is used to restrict the width of changes in the set point as a rate of change. When the SP ramp function is enabled and the change width exceeds the specified rate of change, an area where the set point is restricted will be created, as shown in the following diagram.

During the SP ramp, control will be performed not for the specified set point but rather for the set point restricted by the rate of change set for the SP ramp function.
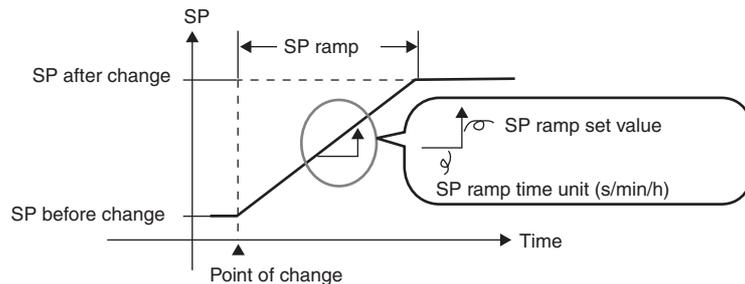

The rate of change during an SP ramp is specified using the SP Ramp Set Value, SP Ramp Fall Value, and SP Ramp Time Unit parameters. The SP Ramp Set Value parameter is set to OFF by default and the SP Ramp Fall Value parameter is set to SAME by default, i.e., the SP ramp function is disabled.

Changes in the ramp set point can be monitored in the Set Point During SP Ramp parameter (Operation Level). Use this parameter when monitoring SP ramp operation.

The SP ramp function operates in the same way when switching the set point using the multi-SP function.

Parameters

Display	Parameter	Description	Level
SPRt	SP Ramp Set Value	To limit the SP rate of change	Adjustment Level
SPRL 000	SP Ramp Fall Value	To limit the SP rate of change	Adjustment Level
SPRU	SP Ramp Time Unit	Unit for setting the SP	Advanced Function Setting Level
RLSP 000	Alarm SP Selection	Alarm SP selection	Advanced Function Setting Level

Precautions for Correct Use

To use the SP ramp function, the ST (self-tuning) parameter must be set to OFF (default: ON). If the ST parameter is set to ON, the settings for the SP ramp function will not be displayed.

● **Operation at Startup**

If the SP ramp function is enabled when the Digital Controller is turned ON or when switching from STOP to RUN mode, the process value reaches the set point using the SP ramp function in the same way as when the set point is changed. In this case, operation is carried out with the process value treated as the set point before the change was made. The direction of the SP ramp changes according to the relationship between the process value and the set point.
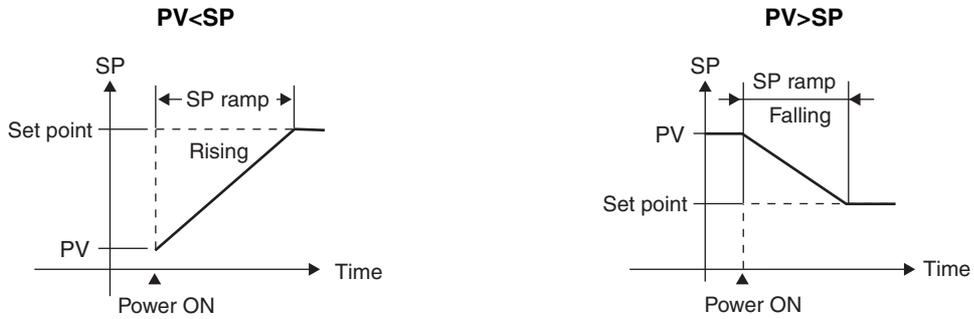

● **Restrictions during SP Ramp Operation**

• Execution of auto-tuning starts after the end of the SP ramp.
• When control is stopped or an error occurs, the SP ramp function is disabled.

● **Alarms during SP Ramp Operation** `000`

The operation of alarms during SP ramp operation depends on whether alarms are set to be based on the ramp set point or the target set point (refer to the following diagrams). The set point to be used is set in the Alarm SP Selection parameter.

Alarm SP Selection = Ramp SP (Alarm Type: 1 (Upper/Lower Limits))
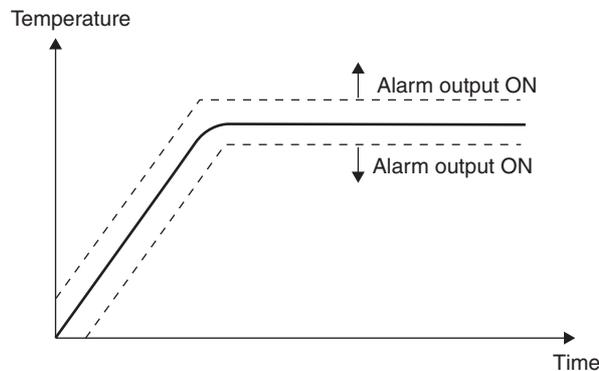

Alarm SP Selection = Target SP (Alarm Type: 1 (Upper/Lower Limits))
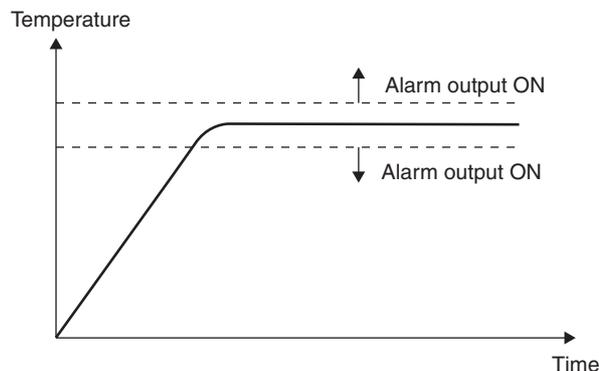

5-7   Using the Key Protect Level

5-7-1   Protection

- To move to the Protect Level, press the ⊟ and ⬅ Keys simultaneously for at least three seconds in Operation Level or Adjustment Level.*

  * The key pressing time can be changed in the Move to Protect Level Time parameter (Advanced Function Setting Level).

- The Protect Level protects parameters that are not changed during Digital Controller operation until operation is started to prevent them from being modified unintentionally.

  There are four types of protection: operation/adjustment protect, initial setting/communications protect, setting change protect, and PF Key protect.

- The protect level settings restrict the range of parameters that can be used.

● Operation/Adjustment Protect

Displaying and changing settings in Operation Level and moving to Adjustment Level are restricted.

The following table shows the relationship between set values and the range of protection.

Level		Set value			
		0	1	2	3
Operation Level	PV	Can be displayed	Can be displayed	Can be displayed	Can be displayed
	PV/SP	Can be displayed and changed	Can be displayed and changed	Can be displayed and changed	Can be displayed
	Others	Can be displayed and changed	Can be displayed and changed	Cannot be displayed and moving to other levels is not possible	Cannot be displayed and moving to other levels is not possible
Adjustment Level		Can be displayed and changed	Cannot be displayed and moving to other levels is not possible	Cannot be displayed and moving to other levels is not possible	Cannot be displayed and moving to other levels is not possible

- Parameters are not protected when the set value is set to 0.
- The default is 0.

● Initial Setting/Communications Protect

This protect level restricts movement to the Initial Setting Level, Communications Setting Level, and Advanced Function Setting Level.

Set value	Initial Setting Level	Communications Setting Level	Advanced Function Setting Level
0	Possible to reach	Possible to reach	Possible to reach
1	Possible to reach	Possible to reach	Not possible to reach
2	Not possible to reach	Not possible to reach	Not possible to reach

- The default is 1.

Application Example: To enable setting only the SP, set both the Operation/Adjustment Protect parameter and the Initial Setting/Communications Protect parameter to 2.

● **Setting Change Protect**

This protect level restricts key operations

```
WtPt
 oFF
```

Set value	Description
OFF	Settings can be changed using key operations.
ON	Settings cannot be changed using key operations. (The protect level settings, however, can be changed.)

• The default is OFF.

• The setting change protection indicator (**O━**) will light when the Setting Change Protect parameter is set to ON.

● **PF Key Protect**

This protect level enables or disables PF Key operations.

```
PFPt
 oFF
```

Set value	Description
OFF	PF Key enabled.
ON	PF Key disabled (Operation as function key prohibited).

• The default is OFF.

5-7-2   Entering the Password to Move to the Protect Level `000`

• The Protect Level can be moved to only by displaying the password display and entering the correct password. (The user can set any password in the Password to Move to Protect Level parameter.) If no password is set (i.e., if the password is set to 0 in the Password to Move to Protect Level parameter), the password input display to move to the Protect Level will not be displayed and the Protect Level can be moved to directly.

Move to the Protect Level and set the password.
Example password: 1234

Operating Procedure

● **Password Not Yet Set**

1	**Press the ⊟ and ⊙ Keys simultaneously for at least 3 seconds (default) in the Operation Level.**[*1] If a password is not set, the Protect Level will be entered and $\bar{o}RPt$ (Operation/Adjustment Protect) will be displayed.	Protect Level ``` oRPt 0 ``` Operation/ Adjustment Protect
2	**Press the ⊙ Key several times in the Protect Level to display** $PRLP$ **(Password to Move to Protect Level).**	``` PRLP 0 ``` Password to Move to Protect Level
3	**Press the ⊟ and ⊗ Keys simultaneously and set the value to 1234. (This enters the password.)** To prevent setting the password incorrectly, the ⊗ and ⊟ Keys or ⊛ and ⊟ Keys must be pressed simultaneously to set the password.	``` PRLP 1234 ```

*1   The key pressing time can be changed in $PRLt$ (Move to Protect Level Time) in the Advanced Function Setting Level. (Setting range: 1 to 30 seconds, Default: 3 seconds)

● Password Already Set

• Deleting the Password (Password Deletion Example: 5678)

	Protect Level
1 Press the ▢ and ▣ Keys simultaneously for at least 3 seconds (default) in the Operation Level.*1 *PMōV* (Move to Protect Level) will be displayed.	$PMōV$ 0 — Move to Protect Level
2 Press the ⌃ or ⌄ Key to set the password to 5678. (This enters the password.)	$PMōV$ 5678
3 Move to the Operation/Adjustment Protect parameter in the Protect Level by pressing the ▢ or ▣ Key or leaving the setting for at least two seconds. (This deletes the password.)	$ōAPt$ 0 — Operation/Adjustment Protect

• Setting the Password Again (Password Example: 1234)

1 Set the password to 1234 again. Press the ▣ Key several times in the Protect Level to display *PRLP* (Password to Move to Protect Level).	$PRLP$ 0 — Password to Move to Protect Level
2 Press the ▢ and ⌃ Keys simultaneously and set the value to 1234. (This enters the password.) To prevent setting the password incorrectly, the ⌃ and ▢ Keys or ⌄ and ▢ Keys must be pressed simultaneously to set the password.	$PRLP$ 1234

*1 The key pressing time can be changed in *PRLt* (Move to Protect Level Time) in the Advanced Function Setting Level. (Setting range: 1 to 30 seconds, Default: 3 seconds)

Precautions for Correct Use

Protection cannot be cleared or changed without the password. Be careful not to forget it. If you forget the password, contact your OMRON sales representative.

● Communications Operation Command to Move to the Protect Level

• The Write Variable operation command can be used via communications to write the password to the Move to Protect Level parameter. When the correct password is written, the display will change to the Operation/Adjustment Protect parameter and writing the parameters in the Protect Level will be enabled.

Note 1: If the Write Variable operation command is used to write the wrong password to the Move to Protect Level parameter after the correct parameter has been written, the Move to Protect Level parameter will be displayed and any Write Variable operation commands to write parameters in the Protect Level will result in operation errors.

2: If a password is not set or if it is set to 0, the display will change to the Operation/Adjustment Protect parameter and writing the parameters in the Protect Level will be enabled immediately.

5-8   Displaying Only Parameters That Have Been Changed

5-8-1   Displaying Changed Parameters

You can display only the parameters that have been changed from their default settings. Parameters that have not been changed will not be displayed. This allows you to easily see which parameters have been changed so that you can check for parameters that still need to be changed or for errors in the settings. This is particularly effective in the Initial Setting Level and Advanced Function Setting Level, where there are many parameters. This can also be used to protect the settings by not displaying unnecessary parameters after the required parameters have been changed. Change $CHGP$ (Changed Parameters Only) in the Protect Level to ON.

Parameters in the Setting Level

Parameters that have been changed by the user.

Changed Parameters Only: Set to ON (enabled).

Only the parameters that have been changed from their default settings are displayed.
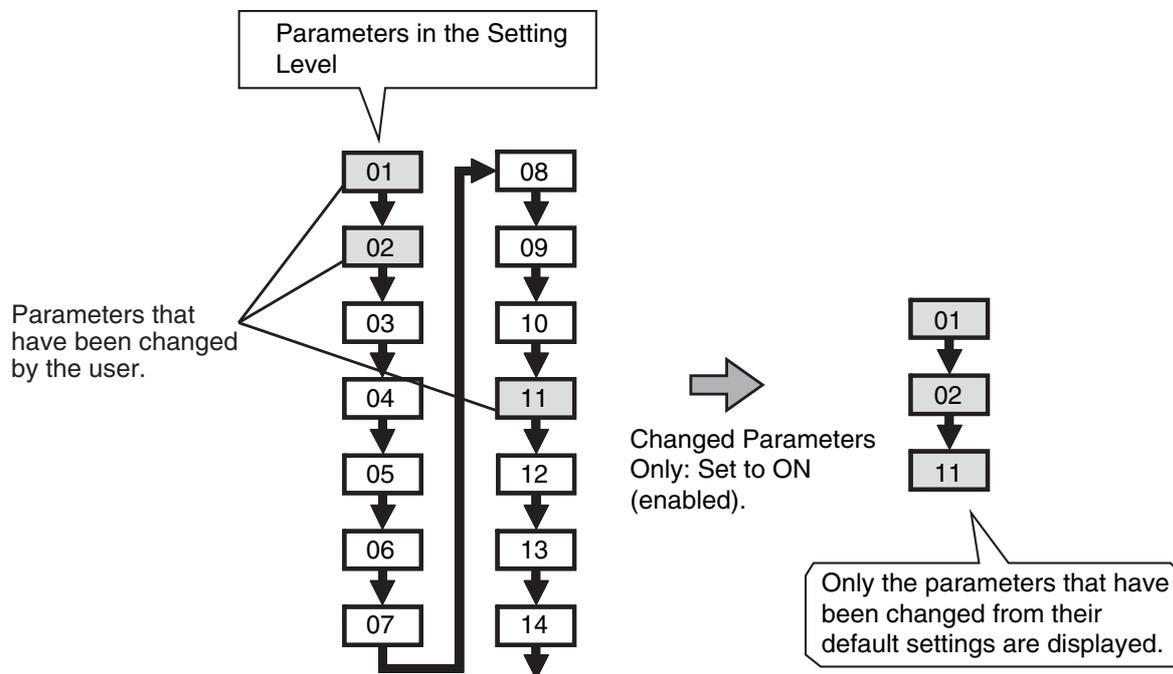

Display	Parameter	Value	Level
$CHGP$	Changed Parameters Only	OFF (disabled) or ON (enabled) (default: OFF)	Protect Level

Precautions for Correct Use

- Set this parameter to ON only after making the required settings.
- The following parameters are displayed regardless of the setting of the Changed Parameters Only parameter.
  - Monitor parameters (including the PV, parameters with "monitor" in the parameter name and the Set Point During SP Ramp parameter)
  - Parameters that switch operation (RUN/STOP, Auto/Manual Switch, Multi-SP, Program Start, AT Execute/Cancel, Communications Writing, SP Mode, Parameter Initialization, Copy, and Motor Calibration).
  - Level displays and parameters to move to other levels (such as Adjustment Level Display, Move to Advanced Function Setting Level, and Move to Calibration Level)
  - Manual MV
- Any parameters that are automatically initialized when another parameter is changed are considered to be at their default settings.
  - Example: If the Input Type parameter is changed to 7, 850 is considered to be the default setting of the Set Point Upper Limit parameter. Refer to *A-6-9 Initialization According to Parameter Changes* for the parameters that are automatically initialized.
- If the setting of a parameter is changed back to its default setting, it will no longer be displayed. To display it again, set the Changed Parameters Only parameter to OFF.
- If a parameter is not displayed even when the Changed Parameters Only parameter is set to OFF, check the conditions for the parameter.
- Use parameter masks to select the parameters to display without considering whether they are set to their default settings. The CX-Thermo is required to set parameter masks.

Operating Procedure

1 **Press the ▣ Key several times in the Protect Level to display** `CHGP` **(Changed Parameters Only).**	Protect Level `CHGP` `oFF` Changed Parameters Only
2 **Press the ⊼ or ⊻ Key to set the value to** `oN`**.** Press the ▭ + ▣ Keys for at least 1 s to return to the Operation Level. Only the parameters that have been changed from their default settings will be displayed.	`CHGP` `oN`

5-9   OR Output of Alarms

5-9-1   Integrated Alarm

You can use an integrated alarm to output an OR of alarms 1 to 4, the HB alarm, the HS alarm, the input error, and the RSP input error. Set the Integrated Alarm Assignment parameter (*ALMA*) and then assign the integrated alarm (*ALM*) to an auxiliary output or a control output.

● **Parameters**

Parameter	No. 1 display	Value	No. 2 display	Level
Control Output Assignment	*oUt 1* to *oUt2*	ALM: Integrated alarm (The Integrated Alarm Assignment parameter must be set separately.)	*ALM*	Advanced Function Setting Level
Auxiliary Output 1 to 4 Assignment	*SUb 1* to *SUb4*	ALM: Integrated alarm (The Integrated Alarm Assignment parameter must be set separately.)	*ALM*	Advanced Function Setting Level
Integrated Alarm Assignment	*ALMA*	Set the sum of the following values for the alarms and errors to include in the OR output. 0 to 255 Alarm 1: +1 Alarm 2: +2 Alarm 3: +4 Alarm 4: +8 HB alarm: +16 HS alarm: +32 Input error: +64 RSP input error: +128 (Default: 49 (i.e., an OR of alarm 1, the HB alarm, and the HS alarm))	0 to 255	Advanced Function Setting Level

● **Operating Procedure**

The following procedure outputs an OR of the following alarms on auxiliary output 2.
- Alarm 1
- HB alarm (*Hb*)
The settings are made in the Advanced Function Setting Level.

Operating Procedure

- Assigning the Integrated Alarm to an Auxiliary Output

1 **Press the** ⊙ **Key several times in the Advanced Function Setting Level to display** *SUb2* **(Auxiliary Output 2 Assignment).**	Advanced Function Setting Level *SUb2* *ALM2* Auxiliary Output 2 Assignment
2 **Press the** ⊗ **or** ⊗ **Key to select** *ALM* **(Integrated Alarm).** The default is *ALM2* (Alarm 2).	*SUb2* *ALM*

- Setting the Integrated Alarm Assignment Parameter

1 **Press the** ⊙ **Key several times in the Advanced Function Setting Level to display** *ALMA* **(Integrated Alarm Assignment).**	Advanced Function Setting Level *ALMA* *49* Integrated Alarm Assignment
2 **Press the** ⊗ **or** ⊗ **Key to set the set value to 17 (i.e., the sum of 1 for alarm 1 and 16 for the HB alarm).** The default is 49. (Alarm 1 (1) + HB alarm (16) + HS Alarm (32)= 49)	*ALMA* *17*

> **Additional Information**
>
> For details on the integrated alarm, refer to *Section 6 Parameters*.

5-10 Alarm Delays

5-10-1 Alarm Delays

- Delays can be set for the alarm outputs. ON and OFF delays can be set separately for alarms 1, 2, 3, and 4. The ON and OFF delays for alarms 1, 2, 3, and 4 also apply to the individual SUB1, SUB2, SUB3, and SUB4 indicators and to communications status. The alarm ON delays will also function when power is turned ON or when moving from the Initial Setting Level to Operation Level (e.g., to software resets). All outputs will turn OFF and the OFF delays will not function when moving to the Initial Setting Level or when an alarm is output for an A/D converter error.

● **Operation of Alarm ON and OFF Delays (for an Upper-limit Alarm)**
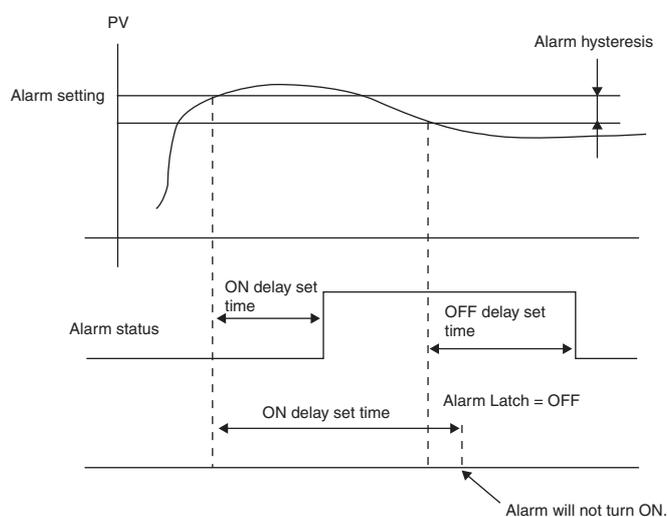

- The alarm will not turn ON if the time that the alarm is ON is equal to or less than the ON delay set time. Also, the alarm will not turn OFF if the time that the alarm is OFF is equal to or less than the OFF delay set time.
- If an alarm turns OFF and then back ON during the ON delay time, the time will be remeasured from the last time the alarm turns ON. Also, if an alarm turns ON and then back OFF during the OFF delay time, the time will be remeasured from the last time the alarm turns OFF.

● **Parameters Related to Alarm Delays**

Parameter name	Display	Set (monitor) values	Level
Alarm 1 ON Delay	*A1oN*	0 to 999 (s)	
Alarm 2 ON Delay	*A2oN*	0 to 999 (s)	
Alarm 3 ON Delay	*A3oN*	0 to 999 (s)	
Alarm 4 ON Delay	*A4oN*	0 to 999 (s)	Advanced Function Setting Level
Alarm 1 OFF Delay	*A1oF*	0 to 999 (s)	
Alarm 2 OFF Delay	*A2oF*	0 to 999 (s)	
Alarm 3 OFF Delay	*A3oF*	0 to 999 (s)	
Alarm 4 OFF Delay	*A4oF*	0 to 999 (s)	

Note 1: The defaults are 0, i.e., the ON and OFF delays are disabled.

   2: The parameters are displayed when alarm functions are assigned and when the alarm type is set to any type but 0 (none), 12: LBA, or 13: PV change rate alarm.

Use the following procedure to set ON and OFF delays for the alarm 1.
An ON delay of 5 seconds and an OFF delay of 10 s will be set.

Operating Procedure

• Setting the Alarm 1 ON Delay

1 Press the ⟳ Key several times in the Advanced Function Setting Level to display *A1ōN* (Alarm 1 ON Delay).	Advanced Function Setting Level *A1ōN* *0* Alarm 1 ON Delay
2 Press the ⌃ or ⌄ Key to set the value to 5. The default is 0.	*A1ōN* *5*

• Setting the Alarm 1 OFF Delay

1 Press the ⟳ Key several times in the Advanced Function Setting Level to display *A1ōF* (Alarm 1 OFF Delay).	Advanced Function Setting Level *A1ōF* *0* Alarm 1 OFF Delay
2 Press the ⌃ or ⌄ Key to set the value to 10. The default is 0.	*A1ōF* *10*

5-10 Alarm Delays

5

5-10-1 Alarm Delays

5-11 Loop Burnout Alarm (Not Supported for Position-proportional Models.)

5-11-1 Loop Burnout Alarm (LBA)

- With a loop burnout alarm, there is assumed to be an error in the control loop if the control deviation (SP - PV) is greater than the threshold set in the LBA Level parameter and if the control deviation is not reduced by at least the value set in the LBA Detection Band parameter within the LBA detection time.
- Loop burnout alarms are detected at the following times.
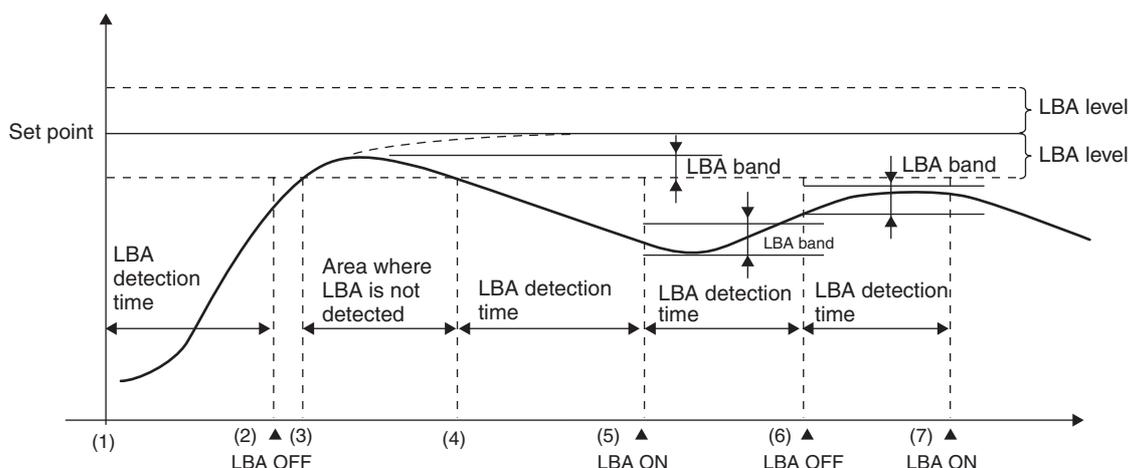

If the control deviation is reduced in the area between 1 and 2 (i.e., the set point is approached) and the amount the control deviation is reduced is at least equal to the LBA band, the loop burnout alarm will remain OFF.

The process value is within the LBA level between 3 and 4, and thus loop burnout alarms will not be detected. (The loop burnout alarm will remain OFF.)

If the process value is outside the LBA level between 4 and 5 and the control deviation is not reduced by at least the LBA band within the LBA detection time, the loop burnout alarm will turn ON.

If the control deviation is reduced in the area between 5 and 6 (i.e., the set point is approached) and the amount the control deviation is reduced is at least equal to the LBA band, the loop burnout alarm will turn OFF.

If the control deviation is reduced in the area between 6 and 7 (i.e., the set point is approached) and the amount the control deviation is reduced is less than the LBA band, the loop burnout alarm will turn ON.

- If the LBA detection time, LBA level, LBA detection band, and PID settings are not appropriate, alarms may be detected inappropriately or alarms may not be output when necessary.
- Loop burnout alarms may be detected if unexpectedly large disturbances occur continuously and a large deviation does not decrease.
- If a loop burnout occurs when the set point is near the ambient temperature, the temperature deviation in a steady state may be less than the LBA level, preventing detection of the loop burnout.
- If the set point is so high or low that it cannot be reached even with a saturated manipulated variable, a temperature deviation may remain even in a steady state and a loop burnout may be detected.
- Detection is not possible if a fault occurs that causes an increase in temperature while control is being applied to increase the temperature (e.g., an SSR short-circuit fault).

- Detection is not possible if a fault occurs that causes a decrease in temperature while control is being applied to decrease the temperature (e.g., a heater burnout fault).

● **Parameters Related to Loop Burnout Alarms**

Parameter name	Display	Setting range		Remarks	Level
LBA Detection Time	*LbA*	0 to 9999 (s)		Setting 0 disables the LBA function.	Advanced Function Setting Level
LBA Level	*LbAL*	Temperature input	0.1 to 999.9 (°C/°F)	Default: 8.0 (°C/°F)	
		Analog input	0.01 to 99.99 (%FS)	Default: 10.00% FS	
LBA Band	*LbAb*	Temperature input	0.0 to 999.9 (°C/°F)	Default: 3.0 (°C/°F)	
		Analog input	0.00 to 99.99 (%FS)	Default: 0.20% FS	

- A loop burnout alarm can be output by setting the alarm 1 type to 12 (LBA).
- A setting of 12 (LBA) can be set for alarms 2 to 4, but the setting will be disabled.
- Loop burnouts are not detected during SP ramp operation.
- Loop burnouts are not detected during auto-tuning, manual operation, or while stopped.
- If the alarm 1 latch is set to ON, the latch will be effective for the loop burnout alarm.
- Loop burnouts are not detected during remote SP operation.

● **Automatically Setting the LBA Detection Time**

- The LBA detection time is automatically set by auto-tuning.
  (It is not set automatically, however, for heating/cooling control.)
- If the optimum LBA detection time is not obtained by auto-tuning, set the LBA Detection Time parameter (Advanced Function Setting Level).

● **Determining the LBA Detection Time**

- To manually set the LBA detection time, set the LBA Detection Time parameter to twice the LBA reference time given below.

   (1) Set the output to the maximum value.

   (2) Measure the time required for the width of change in the input to reach the LBA band.
   (3) Set the LBA Detection Time parameter to two times the measured time.

● **LBA Level**

- Set the control deviation when the control loop is working properly.

- The default is 8.0 (°C/°F) for Digital Controllers with Temperature Inputs and 10.00% FS for Digital Controllers with Analog Inputs.

● **LBA Band**

- There is assumed to be an error in the control loop and the alarm output turns ON if the control deviation is greater than the threshold set in the LBA Level parameter and if the control deviation does not change by at least the value set in the LBA Band parameter.
- The default is 3.0 (°C/°F) for Digital Controllers with Temperature Inputs and 0.20% FS for Digital Controllers with Analog Inputs.

The LBA is used.
The related parameters are as follows:
LBA Detection Time: 10
LBA Level: 8.0
LBA Band: 3.0

Operating Procedure

- Setting the LBA

1	**Press the ⟳ Key several times in the Initial Setting Level to display** *ALt1* **(Alarm 1 Type).**	Initial Setting Level *ALt1* Alarm 1 Type *2*
2	**Press the ⌃ or ⌄ Key to select** *12* **(LBA).** The default is *2* (upper limit).	*ALt1* *12*

- Setting the LBA Detection Time

1	**Press the ⟳ Key several times in the Advanced Function Setting Level to display** *LbA* **(LBA Detection Time).**	Advanced Function Setting Level *LbA* LBA Detection Time *0*
2	**Press the ⌃ or ⌄ Key to set the value to 10.** The default is 0 (s).	*LbA* *10*

- Setting the LBA Level

1	**Press the ⟳ Key several times in the Advanced Function Setting Level to display** *LbAL* **(LBA Level).**	Advanced Function Setting Level *LbAL* LBA Level *8.0*
2	**Press the ⌃ or ⌄ Key to set the value to 8.0.** The default is 8.0 (°C/°F).	*LbAL* *8.0*

- Setting the LBA Band

1	**Press the ⟳ Key several times in the Advanced Function Setting Level to display** *LbAb* **(LBA Band).**	Advanced Function Setting Level *LbAb* LBA Band *3.0*

2 **Press the ⏶ or ⏷ Key to set the value to 3.0.**

The default is 3.0 (°C/°F).
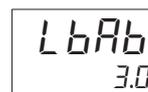

```
L bAb
      3.0
```

5-12 Performing Manual Control

You can perform manual operation with PID control or with a Position-proportional Model.

5-12-1   Manual MV

● **Standard Models and Position-proportional Models (Close Control with Direct Setting of Position Proportional MV Parameter Set to ON)**

If you change to Manual Mode, the Manual MV parameter will be displayed and the displayed value will be output as the MV. If you change the setting of the Manual MV parameter, you can set any required MV. (The new value will be applied immediately.) The default setting of the Manual MV parameter is determined by the setting of the Manual Output Method parameter as shown below.

HOLD: The MV from immediately before moving to Manual Mode
INIT: The set value of the Manual MV Initial Value parameter

If the power supply is cycled during manual operation, operation will be restarted with the manual MV that was in effect before the power supply was interrupted. When the Manual MV Limit Enable parameter is set to ON (enable), the setting range will be from the MV lower limit to the MV upper limit. When operation is changed back to Automatic Mode, the MV from immediately before the change is inherited and then gradually changes to the value for Automatic Mode to prevent the MV from changing rapidly. (This is called balanceless-bumpless operation.)

The manual operation is illustrated in the following figure when the Manual Output Method parameter is set to HOLD.
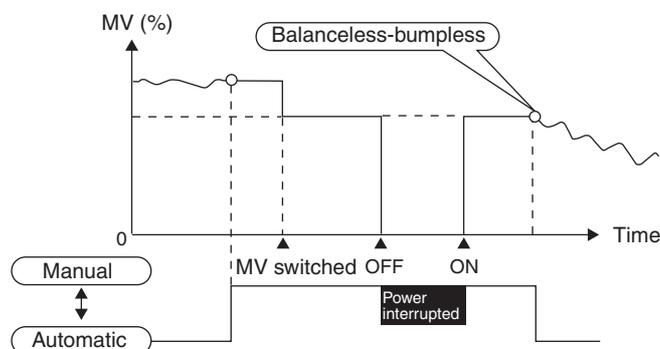

For a Position-proportional Model, the manual MV changes as shown below when there is a potentiometer input error.

Manual MV Limit Enable Parameter Set to OFF
Manual MV ≥ 100: Open output turns ON.
Manual MV ≤ 0: Close output turns ON.
For any other manual MV, both the open output and close output will turn OFF.
Manual MV Limit Enable Parameter Set to ON
Manual MV = MV upper limit: Open output turns ON.
Manual MV = MV lower limit: Close output turns ON.
For any other manual MV, both the open output and close output will turn OFF.

● **Position-proportional Models (Floating Control or Direct Setting of Position Proportional MV Parameter Set to OFF)**

If you move to Manual Mode, the Valve Opening Monitor parameter will be displayed. Press the Up Key to turn ON the open output. Press the Down Key to turn ON the close output.

 Precautions for Correct Use

- The automatic display return function will not operate in Manual Mode.
- Switching between automatic and manual operation is possible for a maximum of one million times.

● Related Displays and Parameters

Parameter name	Display	Setting range	Default	Level
Auto/Manual Switch	A-M	Switching between Automatic Mode and Manual Mode	---	Operation Level
PV/MV (Manual MV)	---	Standard control or position-proportional control: −5.0 to 105.0 Heating/cooling control: −105.0 to 105.0 [*1]	---	Manual Control Level
Auto/Manual Select Addition	$AMAd$	OFF: Not displayed. ON: Displayed.	OFF [*2]	Advanced Function Setting Level
Manual Output Method	$MANt$	HOLD INIT	HOLD	
Manual MV Initial Value	$MAN\bar{\iota}$	Standard control or position-proportional control: −5.0 to 105.0 Heating/cooling control: −105.0 to 105.0 [*1]	0.0	
Manual MV Limit Enable 000	$MANL$	OFF: Disabled. ON: Enabled.	OFF	
Direct Setting of Position-proportional MV	$PMVd$	OFF: Disabled. ON: Enabled.	OFF	

*1 If the Manual MV Limit Enable parameter is set to ON, this value will be between the MV upper limit and the MV lower limit.
*2 The default setting is ON for a Position-proportional Model.
Note: Refer to *5-15 Output Adjustment Functions* for information on the order of priority for the MV.

● Moving to the Manual Control Level

- Moving with a Key Operation
  - When the ⊟ Key is pressed for at least 3 seconds in the Operation Level's auto/manual switching display, the Manual Mode will be entered and the Manual Control Level will be displayed. It is not possible to move to any displays except for the PV/MV parameter during manual operation. Press the ⊟ Key for at least one second from the PV/MV parameter display in Manual Control Level to return to Automatic Mode and display the top parameter in the Operation Level.
  - To enable using the Auto/Manual Switch parameter (Operation Level), you must set the Auto/Manual Select Addition parameter (Advanced Function Setting Level) to ON.
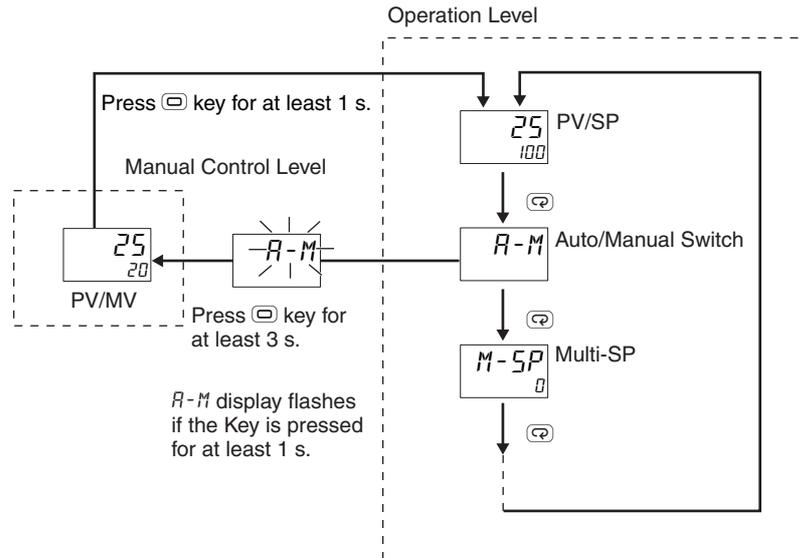

- Using the PF Key to Move to the Manual Control Level
  - When the PF Setting parameter is set to A-M (Auto/Manual), pressing the PF Key for at least one second while in the Adjustment or Operation Level will change the mode to Manual Mode and move to the Manual Control Level. During manual operation it is not possible to move to any displays other than PV/MV (Manual MV). Press the 〈PF〉 or ⊟ Key for at least one second from the PV/MV display in the Manual Control Level to change the mode to Automatic Mode, move to the Operation Level, and display the top parameter in the Operation Level.

  Note 1: Priority of Manual MV and Other Functions
  Even when operation is stopped, the manual MV is given priority.
  Auto-tuning and self-tuning will stop when Manual Mode is entered.
  2: Manual MV and SP Ramp
  If operating, the SP ramp function will continue even when Manual Mode is entered.

- Moving to the Manual Control Level with an Event Input
  - If an event input is set to MANU (auto/manual), you can use the event input to switch between Automatic Mode and Manual Mode.

We will set the PF Setting parameter to A-M (auto/manual).

Operating Procedure

- Setting PID Control

1 Press the ⟳ Key several times in the Initial Setting Level to display *CNtL* (PID ON/OFF).	Initial Setting Level *CNtL* ōNōF PID ON/OFF
2 Press the ⌃ or ⌄ Key to set PID.	*CNtL* Pīd

- Setting Auto/Manual Selection

1 Press the ⟳ Key several times in the Advanced Function Setting Level to display *PF* (PF Setting).	Advanced Function Setting Level *PF* A-M PF Setting
2 Press the ⌃ or ⌄ Key to select *A-M* (auto/manual).	*PF* A-M

• Setting the Manual MV with the Ⓟ Key

	Operation Level
1 **Press the Ⓟ Key in the Operation Level to enter the Manual Control Level.**	```25``` PV/MV ```0.0```
2 **Press the Ⓐ or Ⓥ Key to set the manual MV.** (In this example, the MV is set to 50%.)[*1]	```25``` ```50.0```

*1   The manual MV setting must be saved (see page *Applying Changes to Numeric Values* on page 3-9), but values changed with key operations are reflected in the control output immediately.

5-13 Using the Transfer Output for the Process Value, Set Point, or other Data

5-13-1 Transfer Output Function

A transfer output can be used on models that have a transfer output. With the E5CC-U,* E5DC,* E5DC-B, or E5GC, if the control output is a linear current output, the control output can be used as a simple transfer output. For details on a simple transfer output, refer to *5-13-2 Simple Transfer Output Function*.

*   The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).

● Precision and User Calibration

Precision	User calibration
±0.3% FS	Supported.*

*   For details on calibration, refer to *Section 6 Parameters*.

● Transfer Output Signal (Initial Setting Level)

You can use the Transfer Output Signal parameter to specify whether to output a current or voltage from the transfer output.

Terminal Arrangement

E5CC
Option number: 006

E5CC-B
Option number: 006

E5EC/E5AC
Option number:
011, 012, 013, or 014

E5EC-B
Option number: 011 or 014
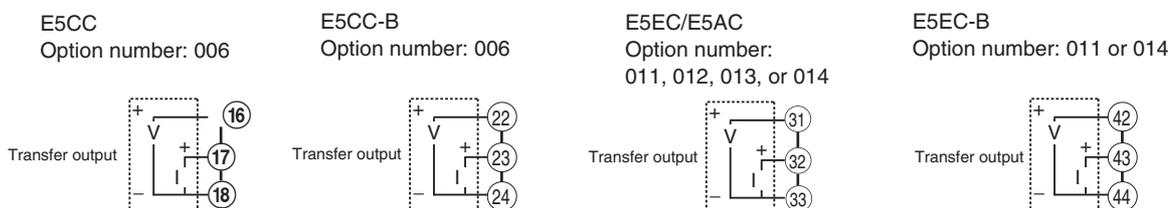

Setting range	Default
4-20: 4 to 20mA	4-20
1-$5V$: 1-5 V	

● Transfer Output Type (Initial Setting Level)

You can use the Transfer Output Type parameter to specify any of six types of data to output.

Transfer output type	Display	Setting range
OFF (default)	oFF	---
Set point [1]	SP	SP lower limit to SP upper limit
Set point during SP ramp	SP-M	SP lower limit to SP upper limit
PV	PV	Input setting range lower limit to input setting range upper limit or Scaling lower limit to scaling upper limit
MV monitor (heating) [2]	MV	−5.0 to 105.0 (heating/cooling control: 0.0 to 105.0)
MV monitor (cooling) [3]	C-MV	0.0 to 105.0
Valve opening [4]	V-M	−10.0 to 110.0

[1]   When the SP is selected, the remote SP will be output while the SP Mode parameter is set to the Remote SP Mode.

*2   This function can be set for a Position-proportional Model, but the setting will be disabled.

*3   This function can be set for standard control or for a Position-proportional Model, but the setting will be disabled.

*4   This parameter is displayed only for a Position-proportional Model.

● Transfer Scaling

- Reverse scaling is possible by setting the Transfer Output Lower Limit parameter larger than the Transfer Output Upper Limit parameter. If the Transfer Output Lower Limit and Transfer Output Upper Limit parameters are set to the same value, the transfer output will be output continuously at 0%.

- If the SP, SP during SP ramp, or PV is selected, the Transfer Output Upper Limit and Transfer Output Lower Limit parameters will be forcibly initialized to the respective upper and lower setting limits if any of the following parameters is changed: Input Type, Scaling Upper Limit, Scaling Lower Limit, Set Point Upper Limit, Set Point Lower Limit, or Temperature Unit.
  If the MV for heating or MV for cooling is selected, the Transfer Output Lower Limit and Transfer Output Upper Limit parameters will be initialized to 100.0 and 0.0, respectively, when a switch is made between standard control and heating/cooling control using the Standard or Heating/Cooling parameter.

- The output current when transfer output signal is set to 4 to 20 mA, the transfer output upper limit is set to 90.0, and the transfer output lower limit is set to 10.0 is shown in the following graph.

- For scaling from 0.0% to 100.0%, the output for −5.0 to 0.0 will be the same value as for 0.0%, and the output for 100.0 to 105.0 will be the same value as for 100.0%
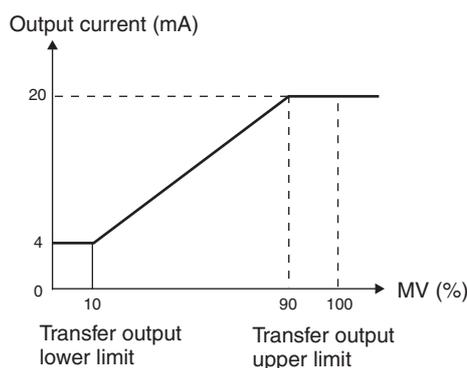

(The above graph is for when transfer output signal is set to 4 to 20 mA.)

Setting Example to Output 1 to 5 V for the Process Value (−50 to 200°C, Input Type 5)

Operating Procedure

- Setting the Transfer Output Signal Type

1 **Press the** ⏎ **Key several times in the Initial Setting Level to display** *tRSt* **(Transfer Output Signal Type).**	Initial Setting Level *tRSt* *4-20* Transfer Output Signal Type
2 **Press the** ⌃ **or** ⌄ **to select** *1-5V* **(1 to 5 V).** The default is *4-20*.	*tRSt* *1-5V*

- Setting the Transfer Output Type

1 **Press the** ⏎ **Key several times in the Initial Setting Level to display** *tR-t* **(Transfer Output Type).**	Initial Setting Level *tR-t* *oFF* Transfer Output Type
2 **Press the** ⌃ **or** ⌄ **Key to select** *PV* **(Process Value).** The default is *oFF*.	*tR-t* *PV*

- Setting the Transfer Output Upper Limit

1 **Press the** ⏎ **Key several times in the Initial Setting Level to display** *tR-H* **(Transfer Output Upper Limit).**	Initial Setting Level *tR-H* *1300* Transfer Output Upper Limit
2 **Press the** ⌃ **or** ⌄ **Key to set the value to 200.** The default is 1300.	*tR-H* *200*

- Setting the Transfer Output Lower Limit

1 **Press the** ⏎ **Key several times in the Initial Setting Level to display** *tR-L* **(Transfer Output Lower Limit).**	Initial Setting Level *tR-L* *-200* Transfer Output Lower Limit
2 **Press the** ⌃ **or** ⌄ **Key to set the value to −50.** The default is −200.	*tR-L* *-50*

5-13-2 Simple Transfer Output Function

With the E5CC-U,* E5DC,* E5DC-B, or E5GC, if the control output is a linear current output, the control output can be used as a simple transfer output.

* The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).

● Precision and User Calibration

Precision	User calibration
±0.3% FS*	None

* However, the precision between 0 and 4 mA for a 0 to 20-mA output is ±1% FS.

Control Output 1 Signal (Initial Setting Level)

You can use the Control Output 1 Signal parameter to specify whether to output 4 to 20 mA or 0 to 20 mA from the simple transfer output.

Terminal Arrangement
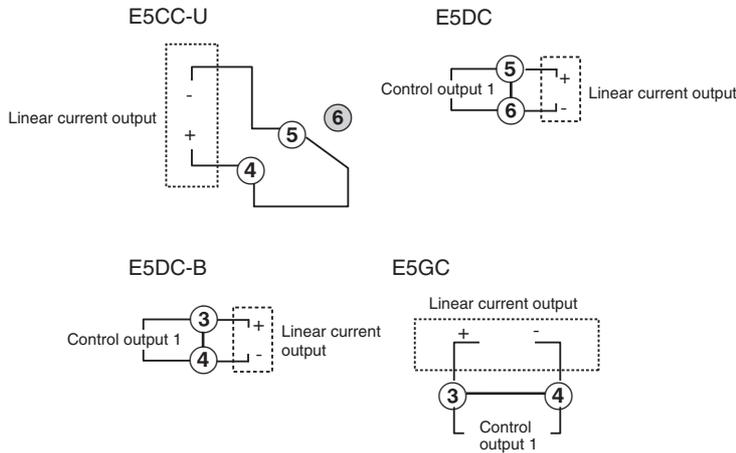

Setting range	Default
4-20: 4 to 20 mA	4-20
0-20: 0 to 20 mA	

● Control Output 1 Assignment (Advanced Function Setting Level)

To use the simple transfer output, specify any of the following five types of data to output with the Control Output 1 Assignment parameter.

Simple transfer output type (Control Output 1 Assignment)	Display	Setting range
Simple transfer SP	t-SP	SP lower limit to SP upper limit
Simple transfer ramp SP	tSPM	SP lower limit to SP upper limit
Simple transfer PV	t-PV	Input setting range lower limit to input setting range upper limit, or Scaling lower limit to scaling upper limit
Simple transfer MV (heating)	t-MV	−5.0 to 105.0 (heating/cooling control: 0.0 to 105.0)
Simple transfer MV (cooling)*	tCMV	0.0 to 105.0

* This function can be set for standard control, but the setting will be disabled.

● **Simple Transfer Scaling**

- Reverse scaling is possible by setting the Simple Transfer Output 1 Lower Limit parameter larger than the Simple Transfer Output 1 Upper Limit parameter. If the Simple Transfer Output 1 Lower Limit and Simple Transfer Output 1 Upper Limit parameters are set to the same value, the simple transfer output will be output continuously at 0%.
- If the Simple Transfer SP, Simple Transfer SP during SP Ramp, or Simple Transfer PV is selected, the Simple Transfer Output 1 Upper Limit and Simple Transfer Output 1 Lower Limit parameters will be forcibly initialized to the respective upper and lower setting limits if any of the following parameters is changed: Input Type, Scaling Upper Limit, Scaling Lower Limit, Set Point Upper Limit, Set Point Lower Limit, or Temperature Unit. If the Simple Transfer MV (Heating) or Simple Transfer MV (Cooling) is selected, the Simple Transfer Output 1 Lower Limit and Simple Transfer Output 1 Upper Limit parameters will be initialized to 100.0 and 0.0, respectively, when a switch is made between standard control and heating/cooling control using the Standard or Heating/Cooling parameter.
- The output current when the Simple Transfer Output 1 Signal parameter is set to 4 to 20 mA, the Simple Transfer Output 1 Upper Limit parameter is set to 90.0, and the Simple Transfer Output 1 Lower Limit parameter is set to 10.0 is shown in the following graph.
- For scaling from 0.0% to 100.0%, the output for −5.0 to 0.0 will be the same value as for 0.0%, and the output for 100.0 to 105.0 will be the same value as for 100.0%
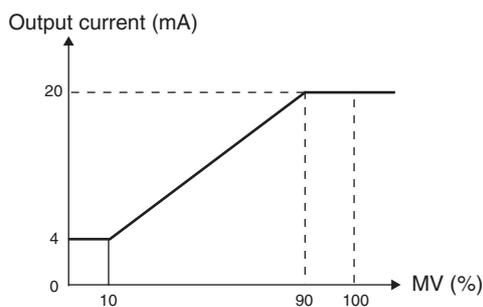

(The above graph is for when the simple transfer output 1 signal is set to 4 to 20 mA.)

The following procedure sets the simple transfer output for an simple transfer SP range of −50 to 200.

Operating Procedure

• Setting the Transfer Output Type

_1_ Press the ⟲ Key several times in the Advanced Function Setting Level to display ō∪ŁＩ (Control Output 1 Assignment).	Advanced Function Setting Level ō∪Ł Ｉ Control Output 1 Assignment ō
_2_ Press the ⌃ or ⌄ Key to select Ł-5P (simple transfer SP). The default is ō.	ō∪Ł Ｉ Ł-5P

• Setting the Simple Transfer Output 1 Upper Limit

_1_ Press the ⟲ Key several times in the Initial Setting Level to display ōＩŁH (Simple Transfer Output 1 Upper Limit).	Initial Setting Level ōＩŁH Simple Transfer Output 1 Upper Limit Ｉ３００
_2_ Press the ⌃ or ⌄ Key to set 200. The default is 1300.	ōＩŁH ２００

• Setting the Simple Transfer Output 1 Lower Limit

_1_ Press the ⟲ Key several times in the Initial Setting Level to display ōＩŁL (Simple Transfer Output 1 Lower Limit).	Initial Setting Level ōＩŁL Simple Transfer Output 1 Lower Limit -２００
_2_ Press the ⌃ or ⌄ Key to set −50. The default is −200.	ōＩŁL -５０
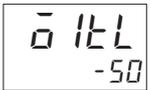

5-14   Using the Simple Program Function 000

5-14-1   Simple Program Function

- The simple program function can be used for the following type of control.
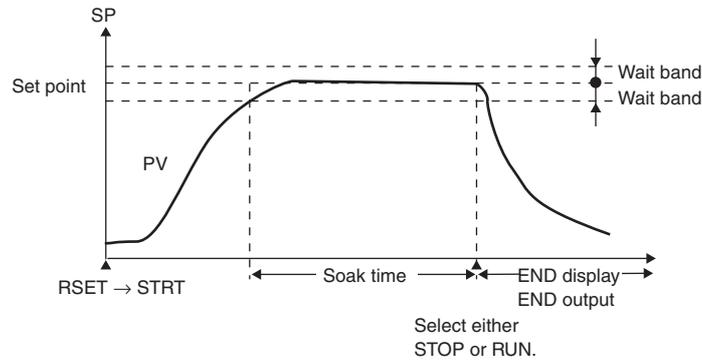

- The program will start when the Program Start parameter is changed from RSET to STRT. END will be displayed on the No. 2 display and the output assigned as the program end output will turn ON after the time set in the Soak Time parameter has expired in the wait band. The Program Pattern parameter can be used to select moving to STOP mode or continuing operation in RUN mode after the program ends.

● Parameters Related to the Simple Program Function

Parameter name	Display	Set (monitor) values	Unit	Display level
Program Pattern	PtRN	OFF, STOP, CONT	---	Initial Setting Level
Program Start	PRSt	RSET, STRT	---	Operation Level
Soak Time	SoAK	1 to 9999	min, h, or s[1]	Adjustment Level
Soak Time Unit	t-U	s (seconds)[1]/m (minutes)/h (hours)	---	Advanced Function Setting Level
Wait Band	Wt-b	OFF or 0.1 to 999.9*	°C or °F*	Adjustment Level
Soak Time Remain Monitor	SKtR	0 to 9999	min, h, or s[1]	Operation Level

*1   Seconds is supported only by the E5DC, E5DC-B and E5GC. (The E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

*2   The setting unit of the Wait Band parameter is %FS for Digital Controllers with Analog Inputs and the setting range is OFF or 0.01 to 99.99.

● **Program Pattern**

Either of two program patterns can be selected. The simple program operation will not be performed if the Program Pattern parameter is set to OFF.

(1) Pattern 1 (STOP)

Control will stop and the STOP mode will be entered when the program has ended.
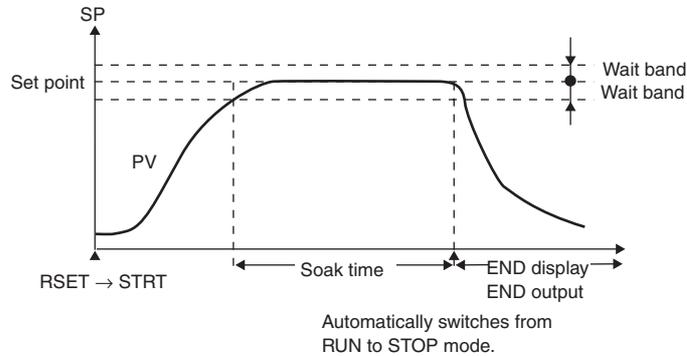

(2) Pattern 2 (CONT)

Control will continue in RUN mode when the program has ended.
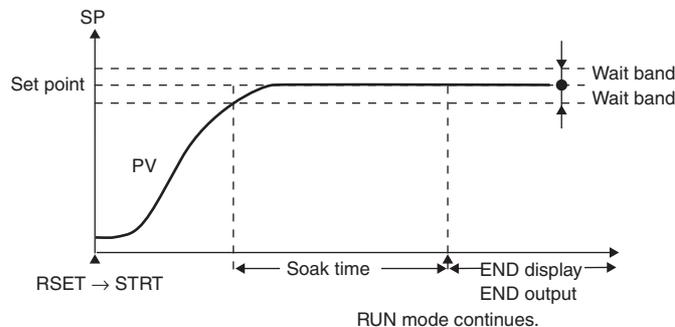

● **Starting Method**

Any of the following three methods can be used to start the simple program.
- Setting the Program Start parameter to STRT.
- Turning ON an event input. (The program start must be assigned to an event input.*)
- Starting with an Operation Command using communications. (When the program start is not assigned to an event input.)

* When the simple program is started and reset, writing is performed to non-volatile memory. Be sure to consider the write life (1 million writes) of the non-volatile memory in the system design. When the program start is assigned to an event input, the Program Start parameter will function as a monitor display, and the RSET/STRT displays can be used to check when the event input has started or reset the simple program. When this is done, the Program Start parameter functions as a monitor display only and cannot be changed using key operations. If the Program Pattern parameter is set to OFF, the event input assignment setting will be initialized to "None."

● **Soak Time and Wait Band**
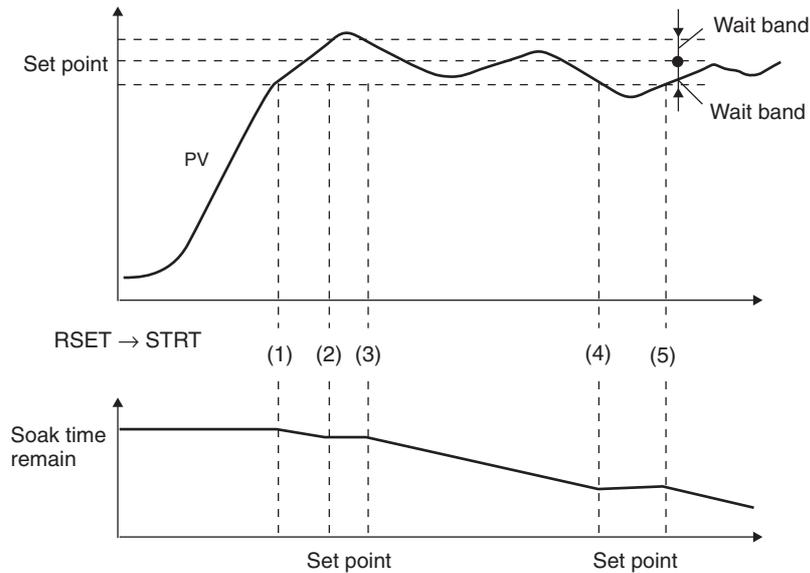

The wait band is the band within which the process value is stable in respect to the set point. The soak time is measured within the wait band. The timer that measures the soak time operates only when the process value is within the wait band around the set point (i.e., SP ± wait band). In the above diagram, the timer will be stopped between the start and (1), (2) and (3), and (4) and (5) and will measure the time only between (1) and (2), (3) and (4), and (5) and the end.

* If the wait band is set to OFF, the wait band will be treated as infinity and the timer will measure time continuously after changing from RSET to STRT.

5-14-2 Operation at the Program End

- Display at the Program End
  When the program ends, the process value will be displayed on the No. 1 display* and the set point and *End* will be alternately displayed on the No. 2 display at 0.5 s intervals.
  * One of the following displays: PV/SP, PV only, or PV/MV.

$$\boxed{\begin{array}{c} \textit{120.1} \\ \textit{ENd} \end{array}} \quad \text{Displayed alternately.} \longleftrightarrow \textit{120.0}$$
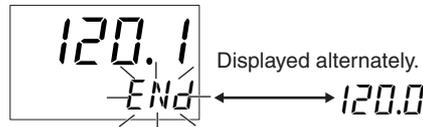

- Program End Output
  The output assignment parameters can be used to assign the program END output to any output. The program END output can also be used in communications status.

When the Program Pattern parameter is changed from OFF to STOP or CONT, the Auxiliary Output 1 Assignment parameter will automatically be set to the END output. (However, if heating/cooling control is used for the E5GC, the assignment of the control output for cooling will take priority.) When the Program Pattern parameter is changed from STOP or CONT to OFF, the Alarm 1 Output Assignment parameter will automatically be initialized to ALM1 (or to HA for Digital Controllers that have HB or HS alarms).

- Clearing the Program End Status
  The program END output and display will be cleared when the Program Start parameter is changed from STRT to RSET. The setting is changed from STRT to RSET while the Program Start parameter is displayed.
  The program END status can also be cleared using an event. If the program start function is assigned to an event, however, the program end status cannot be cleared from the Program Start parameter display, which will function only as a monitor display.

Simple programming is used.

The related parameters are as follows:

Program pattern: STOP

Soak time = 10 min

Wait band: 3
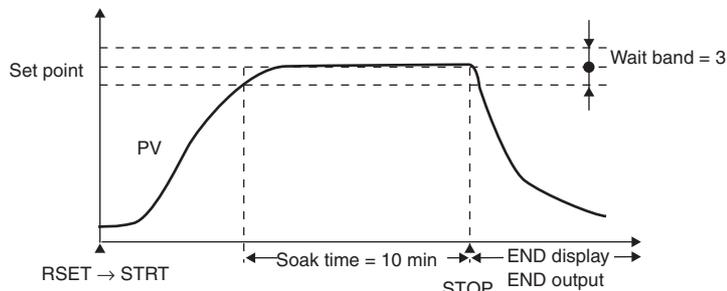

Operating Procedure

- Setting the Program Pattern

1	Press the ⊙ Key several times in the Initial Setting Level to display *PLRN* (Program Pattern).	Initial Setting Level *PLRN* Program Pattern *oFF*
2	Press the ⊙ or ⊙ Key to select *StoP* (STOP). The default is *oFF*.	*PLRN* *StoP*

- Setting the Soak Time

1	Press the ⊙ Key several times in the Adjustment Level to display *SoAK* (Soak Time).	Adjustment Level *SoAK* Soak Time *1*
2	Press the ⊙ or ⊙ Key to set the value to 10. The default is 1 (min or h).	*SoAK* *10*

- Setting the Wait Band

1	Press the ⊙ Key several times in the Adjustment Level to display *Wt-b* (Wait Band).	Adjustment Level *Wt-b* Wait Band *oFF*
2	Press the ⊙ or ⊙ Key to set the value to 3.0. The default is *oFF*.	*Wt-b* *3.0*

5-14-3 Application Example Using a Simple Program

The program will be started by changing the setting of the Program Start parameter. The following example shows using a simple program with the program pattern set to STOP.
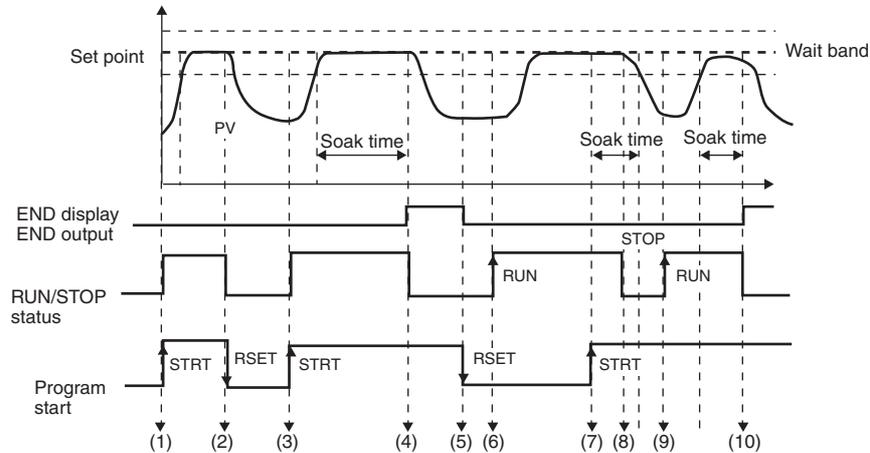

Timing	Description
(1)	• The Program Start parameter was changed from RSET to STRT using either an event or key operations. • The RUN/STOP status automatically changes to RUN mode when the above operation is performed.
(2)	• The Program Start parameter was changed from STRT to RSET using either an event or key operations before the soak time expired. • The RUN/STOP status automatically changes to STOP mode when the above operation is performed.
(3)	• The Program Start parameter is again changed from RSET to STRT using either an event or key operations. • The RUN/STOP status will automatically change to RUN mode when the above operation is performed.
(4)	• The RUN/STOP status automatically changes to STOP mode when soak time expires. • END flashes on the No. 2 display and the program END output turns ON.
(5)	• The Program Start parameter is changed from STRT to RSET using either an event or key operations. • The END display is cleared and the program END output turns OFF.
(6)	• Key operations are used to switch the RUN/STOP status to RUN with the Program Start parameter set to RSET (stopped). • Normal control operation is started.
(7)	• The Program Start parameter is changed from RSET to STRT using either an event or key operations after the process value stabilizes. • The RUN/STOP status remains as RUN.
(8)	• Key operations are used to change the RUN/STOP status to STOP (during program operation). • Measuring the soak time is continued within the wait band. (Measuring the soak time stops when the process value leaves the wait band.)
(9)	• Key operations are used to change the RUN/STOP status to RUN. • Measuring the soak time is continued within the wait band (continuing from the time between (7) and (9)).
(10)	• The RUN/STOP status automatically changes to STOP mode when the measured time reaches the soak time. • END flashes on the No. 2 display and the program END output turns ON.

5-15   Output Adjustment Functions

5-15-1   Output Limits

- Output limits can be set to control the output using the upper and lower limits to the calculated MV.
- The following MV takes priority over the MV limits.
  Manual MV*
  MV at stop
  MV at PV error
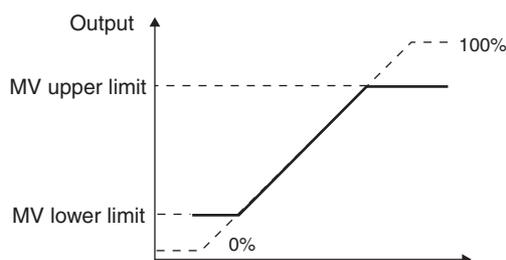

*   When the manual MV limit is enabled, the manual MV will be restricted by the MV limit.

- For heating/cooling control, upper and lower limits are set for overall heating/cooling control. (They cannot be set separately for heating/cooling.)
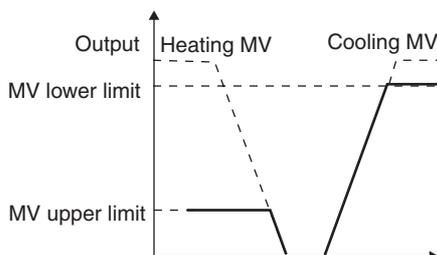

5-15-2   MV at Stop `000`

The MV when control is stopped can be set.
To set the MV when control is stopped, set the MV at Stop and Error Addition parameter (Advanced Function Setting Level) to ON.

- Standard Models
  For heating/cooling control, the MV at stop will apply to the cooling side if the MV is negative and to the heating side if the MV is positive. The default is 0.0, so an MV will not be output for either standard or heating/cooling control.

- Position-proportional Models
  You can select between open, close, and hold for floating control or when the Direct Setting of Position Proportional MV parameter is set to OFF. For open, only the open output turns ON. For close, only the close output turns ON. For hold, both the open output and close output turn OFF. The default setting is hold, so both outputs are turned OFF. If you set the Direct Setting of Position Proportional MV parameter to ON for close control, you can specify the valve opening. The default setting is 0.0, which means that the open output and close output will be adjusted so that the valve opening will go to 0.

Parameter	Setting range	Unit	Default
MV at Stop	Standard control: −5.0 to 105.0	% or none	0.0 or HOLD
	Heating/cooling control: −105.0 to 105.0		
	Position-proportional Control		
	Direct Setting of Position Proportional MV parameter set to ON for close control: −5.0 to 105.0		
	Floating control or Direct Setting of Position Proportional MV parameter set to OFF:		
	CLOS (Control output 2 turns ON.)		
	HOLD (Control outputs 1 and 2 turn OFF.)		
	OPEN (Control output 1 turns ON.)		

Note: The order of priority in respect to the manual MV and the MV at PV error is as follows: Manual MV > MV at stop > MV at PV error.

- If the Direct Setting of Position Proportional MV parameter is set to ON, the operation is as shown below when there is a potentiometer input error.

    MV at stop ≥ 100: Open output turns ON.
    MV at stop ≤ 0: Close output turns ON.
    For any other MV at stop, both the open output and close output will turn OFF.

5-15-3 MV at PV Error 000

A fixed MV is output when there is an input error, an RSP input error, or a potentiometer input error (close control only). To set the MV at PV error, set the MV at Stop and Error Addition parameter (Advanced Function Setting Level) to ON. The MV at stop takes priority when control is stopped and the manual MV takes priority in Manual Mode.

- Standard Models
  For heating/cooling control, the MV at PV Error will apply to the cooling side if the MV is negative and to the heating side if the MV is positive. The default is 0.0, so an MV will not be output for either standard or heating/cooling control.

- Position-proportional Models
  You can select between open, close, and hold for floating control or when the Direct Setting of Position Proportional MV parameter is set to OFF. For open, only the open output turns ON. For close, only the close output turns ON. For hold, both the open output and close output turn OFF. The default setting is to hold, so both outputs are turned OFF. If you set the Direct Setting of Position Proportional MV parameter to OFF for close control, you can specify the valve opening. The default setting is 0.0, which means that the open output and close output will be adjusted so that the valve opening will go to 0.

Parameter	Setting range	Unit	Default
MV at PV Error	Standard control: −5.0 to 105.0	% or none	0.0 or HOLD
	Heating/cooling control: −105.0 to 105.0		
	Position-proportional Control		
	Direct Setting of Position Proportional MV parameter set to ON for close control: −5.0 to 105.0		
	Floating control or Direct Setting of Position Proportional MV parameter set to OFF:		
	CLOS (Control output 2 turns ON.)		
	HOLD (Control outputs 1 and 2 turn OFF.)		
	OPEN (Control output 1 turns ON.)		

Note: The order of priority with respect to the manual MV and the MV at Stop is as follows: Manual MV > MV at stop > MV at PV error.

- If the Direct Setting of Position Proportional MV parameter is set to ON, the operation is as shown below when there is a potentiometer input error.

    MV at PV error ≥ 100: Open output turns ON.
    MV at PV error ≤ 0: Close output turns ON.
    For any other MV at PV error, both the open output and close output will turn OFF.

• The order of priority of the MV is illustrated in the following diagram.
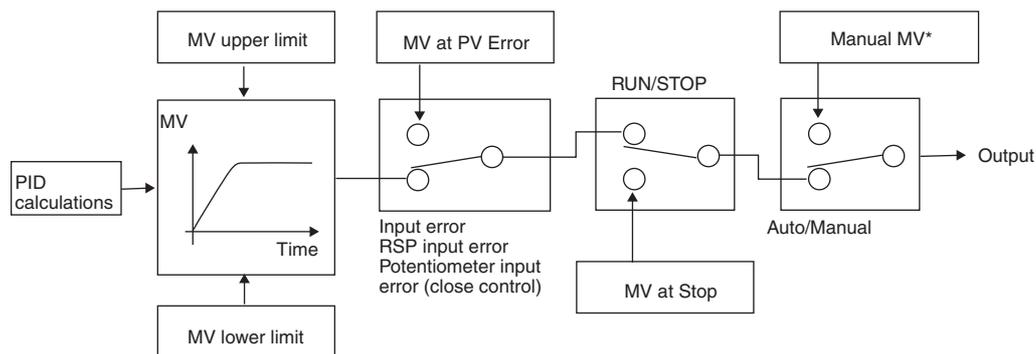

* When the Manual MV Limit Enable parameter is set to ON, the setting range will be the MV lower limit to the MV upper limit.

5-16 Using the Extraction of Square Root Parameter 000

5-16-1 Extraction of Square Roots

Extraction of Square Root
Enable

⎡SQR⎤
⎣ oFF ⎦

Extraction of Square Root
Low-cut Point

⎡SQRP⎤
⎣ 0.0 ⎦

- For analog inputs, the Extraction of Square Root parameter is provided for inputs so that differential pressure-type flow meter signals can be directly input.
- The default setting for the Extraction of Square Root parameter is OFF. The Extraction of Square Root Enable parameter must be set to ON in order to use this function.
- If the PV input (i.e., the input before extracting the square root) is higher than 0.0% and lower than the low cut point set in the Extraction of Square Root Low-Cut Point parameter, the results of extracting the square root will be 0.0%. If the PV input is lower than 0.0% or higher than 100.0%, extraction of the square root will not be executed, so the result will be equal to the PV input. The low-cut point is set as normalized data for each input, with 0.0 as the lower limit and 100.0 as the upper limit for the input setting range.
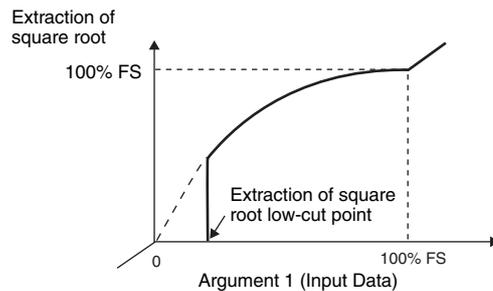

Parameter name	Setting range	Unit	Default	Level
Extraction of Square Root Enable	OFF: Disabled, ON: Enabled	---	OFF	Initial Setting Level
Extraction of Square Root Low-cut Point	0.0 to 100.0	%	0.0	Adjustment Level

This procedure sets the Extraction of Square Root Low-cut Point parameter to 10.0%.

The input type must be set for an analog input.

Operating Procedure

- Enabling Extraction of Square Roots

1 Press the ⓞ Key several times in the Initial Setting Level to display SQR (Extraction of Square Root Enable).

Initial Setting Level

⎡SQR⎤ Extraction of
⎣ oFF⎦ Square
        Root Enable

2 Press the ⊼ or ⊻ Key to select oN (Enabled).
The default is oFF (disabled).

⎡SQR⎤
⎣ oN⎦

• Setting the Extraction of Square Root Low-cut Point

1	Press the ◙ Key several times in the Adjustment Level to display *SQRP* (Extraction of Square Root Low-cut Point).	Adjustment Level *SQRP* *0.0* Extraction of Square Root Low-cut Point
2	Press the ⊙ or ⊙ Key to set the value to 10.0. The default is 0.0 (%).	*SQRP* *10.0*

5-17 Setting the Width of MV Variation 000

5-17-1 MV Change Rate Limit

MV Change Rate
Limit

```
ōRL
    0.0
```

- The MV change rate limit sets the maximum allowable width of change per second in the MV (or the change per second in the valve opening for a Position-proportional Model). If the change in the MV exceeds this setting, the MV will be changed by the MV change rate limit until the calculated value is reached. This function is disabled when the setting is 0.0.
- The MV change rate limit does not function in the following situations:
    - In Manual Mode
    - During ST execution (Cannot be set when ST is ON.)
    - During AT execution
    - During ON/OFF control
    - While stopped (during MV at Stop output)
    - During MV at PV Error output

Parameter name	Setting range	Unit	Default	Level
MV Change Rate Limit	0.0 to 100.0	%/s	0.0	Adjustment Level

This procedure sets the MV change rate limit to 5.0%/s. The related parameters are as follows:

PID ON/OFF = PID

ST = OFF

Operating Procedure

• Setting 2-PID Control

1	Press the ⊙ Key several times in the Initial Setting Level to display *CNtL* (PID ON/OFF).	Initial Setting Level *CNtL* PID ON/OFF *oNoF*
2	Press the ⌃ or ⌄ Key to select *Pid* (PID). The default is *oNoF* (ON/OFF control).	*CNtL* *Pid*

• Turning OFF Self-tuning

1	Press the ⊙ Key several times in the Initial Setting Level to display *St* (ST: self-tuning).	Initial Setting Level *St* ST *oN*
2	Press the ⌃ or ⌄ Key to set the value to *oFF*. The default is *oN*.	*St* *oFF*

• Setting the MV Change Rate Limit

1	Press the ⊙ Key several times in the Adjustment Level to display *oRL* (MV Change Rate Limit).	Adjustment Level *oRL* MV Change 0.0 Rate Limit
2	Press the ⌃ or ⌄ Key to set the value to 5.0. The default is 0.0 (%/s).	*oRL* 5.0

5-18 Setting the PF Key

5-18-1 PF Setting (Function Key)

PF Setting (Advanced
Function Setting Level)

```
PF
SHFt
```

- Pressing the PF Key for at least one second executes the operation set in the PF Setting parameter. The default is $SHFt$ (digit shift).

Set value	Display	Setting	Function
OFF	oFF	Disabled	Does not operate as a function key.
RUN	RUN	RUN	Specifies RUN status.*5
STOP	$StoP$	STOP	Specifies STOP status.*5
R-S	$R-S$	RUN/STOP reverse operation	Specifies reversing the RUN/STOP operation status. *5
AT-2	$At-2$	100% AT Execute/Cancel	Specifies reversing the 100% AT Execute/Cancel status.*1 *5
AT-1	$At-1$	40% AT Execute/Cancel	Specifies reversing the 40% AT Execute/Cancel status.*1 *4 *5
LAT	LAt	Alarm Latch Cancel	Specifies canceling all alarm latches.*2 *5
A-M	$A-M$	Auto/Manual	Specifies reversing the Auto/Manual status.*3 *5
PFDP	$PFdP$	Monitor/Setting Item	Specifies the monitor/setting item display. Select the monitor setting item according to the Monitor/Setting Item 1 to 5 parameters (Advanced Function Setting Level).
SHFT	$SHFt$	Digit Shift	Operates as a Digit Shift Key when settings are being changed.

*1   When AT cancel is specified, it means that AT is cancelled regardless of whether the AT currently being executed is 100% AT or 40% AT.

*2   Alarms 1 to 4, the HB alarm, and the HS alarm are cancelled.

*3   For details on auto/manual operations using the PF Key, refer to *5-12 Performing Manual Control*.

*4   AT-1 can be set for heating/cooling control or for floating position-proportional control, but the setting will be disabled.

*5   The function that is set for the PF Key is disabled if the same function is assigned to an event input. For the default event input assignments, refer to *Event Input Assignment 1* to *Event Input Assignment 6* on page 6-57.

Note 1: Pressing the PF Key for at least one second executes operation according to the set value. (However, if Digit Shift is set, operation will be in less than one second.) When the Monitor/Setting Item parameter is selected, however, the display is changed in order from Monitor/Setting Item 1 to 5 each time the key is pressed.

2: This function is enabled when PF Key Protect is OFF.

● **Monitor/Setting Item** `000`

Monitor/Setting Item 1
(Advanced Function Setting
Level)

$$PFd1$$ Item 5

$$Fd5$$

$$0$$
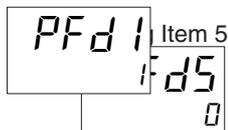

Setting the PF Setting parameter to the Monitor/Setting Item makes it possible to display monitor/setting items using the Ⓟ Key. The following table shows the details of the settings. For setting (monitor) ranges, refer to the applicable parameter.

Set value	Setting	Remarks	
		Monitor/Setting	Display
0	Disabled		---
1	PV/SP/Multi-SP	Can be set. (SP)[*1]	---
2	PV/SP/MV (valve opening for Position-pro-portional Model)	Can be set. (SP)[*1]	---
3	PV/SP /Soak time remain	Can be set. (SP)[*1]	---
4	Proportional band (P)	Can be set.	P
5	Integral time (I)	Can be set.	$\bar{\iota}$
6	Derivative time (D)	Can be set.	d
7	Alarm value 1	Can be set.	AL-1
8	Alarm value upper limit 1	Can be set.	$AL\ 1H$
9	Alarm value lower limit 1	Can be set.	$AL\ 1L$
10	Alarm value 2	Can be set.	AL-2
11	Alarm value upper limit 2	Can be set.	$AL2H$
12	Alarm value lower limit 2	Can be set.	$AL2L$
13	Alarm value 3	Can be set.	AL-3
14	Alarm value upper limit 3	Can be set.	$AL3H$
15	Alarm value lower limit 3	Can be set.	$AL3L$
16	Alarm value 4	Can be set.	AL-4
17	Alarm value upper limit 4	Can be set.	$AL4H$
18	Alarm value lower limit 4	Can be set.	$AL4L$
19	PV/SP/Internal SP	Can be set. (SP)[*1]	---
20	PV/SP/Alarm Value 1[*2]	Can be set. (SP)[*1]	---
21	Proportional Band (Cooling)	Can be set.	C-P
22	Integral Time (Cooling)	Can be set.	C-$\bar{\iota}$
23	Derivative Time (Cooling)	Can be set.	C-d

*1   With the E5CC, E5CC-U, E5CC-B, E5DC, E5DC-B, or E5GC, only the PV and SP can be displayed.

*2   The Alarm Value 1 parameter is displayed even if the Alarm 1 Type parameter is set for no alarm. However, any value that is set is not valid.

Setting Monitor/Setting Items

Pressing the ⦗PF⦘ Key in either the Operation or Adjustment Level displays the applicable monitor/setting items. Press the ⦗PF⦘ Key to display in order Monitor/Setting Items 1 to 5. After Monitor/Setting Item 5 has been displayed, the display will switch to the top parameter in the Operation Level.

Note 1: Items set as disabled in the Monitor/Setting Items 1 to 5 parameters will not be displayed, and the display will skip to the next enabled setting.

2: While a monitor/setting item is being displayed, the display will be switched to the top parameter in the Operation Level if the ⦗◄⦘ Key or the ⦗▭⦘ Key is pressed.

This procedure sets the PF Setting parameter to PFDP, and the Monitor/Setting Item 1 parameter to 7 (Alarm Value 1).

Operating Procedure

• Setting the PF Key

1	**Press the ⦗◄⦘ Key several times in the Advanced Function Setting Level to display** *PF* **(PF Setting).**	Advanced Function Setting Level *PF* PF Setting *SHFt*
2	**Press the ⦗⌃⦘ or ⦗⌄⦘ Key to select** *PFdP* **(Monitor/Setting Item).** The default is *SHFt* (digit shift).	*PF* *PFdP*

• Setting the Monitor/Setting Items

1	**Press the ⦗◄⦘ Key several times in the Advanced Function Setting Level to display** *PFd1* **(Monitor/Setting Item 1).**	Advanced Function Setting Level *PFd1* Monitor/Setting *1* Item 1
2	**Press the ⦗⌃⦘ or ⦗⌄⦘ Key to select 7 (Alarm Value 1).** The default is 1 (PV/SP/Multi-SP No.).	*PFd1* *7*
3	**Return to the Operation Level and press the ⦗PF⦘ Key to display** *AL - 1* **(Alarm Value 1).**	Monitor/Setting Item Level *AL - 1* Monitor/Setting *0* Item Display 1
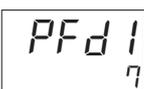

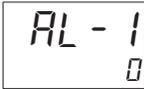

5-19 Displaying PV/SV Status

5-19-1 PV and SV Status Display Functions

● PV Status Display Function (Advanced Function Setting Level)

The PV on the No. 1 display in the PV, PV/SP, PV/Manual MV, or PV/SP Manual MV Display and the control or alarm status specified for the PV status display function are alternately displayed in 0.5-s cycles.[1]

- PV
- PV/SP[2]
- PV/Manual MV (Valve Opening)
- PV/SP/Manual MV (Valve Opening)

[1] This includes the displays specified with the PV/SP No. 1 and PV/SP No. 2 Display Selection parameters.
[2] This includes when the PV/SP is selected for the Monitor/Setting Item parameter.

Set value	Display	Function
OFF	o̅FF	No PV status display
Manual	MANU	MANU is alternately displayed during manual control.
Stop	Sto̅P	STOP is alternately displayed while operation is stopped.
Alarm 1	ALM1	ALM1 is alternately displayed during Alarm 1 status.
Alarm 2	ALM2	ALM2 is alternately displayed during Alarm 2 status.
Alarm 3	ALM3	ALM3 is alternately displayed during Alarm 3 status.
Alarm 4	ALM4	ALM4 is alternately displayed during Alarm 4 status.
Alarm 1 to 4 OR status	ALM	ALM is alternately displayed when Alarm 1, 2, 3, or 4 is set to ON.
Heater Alarm	HA	HA is alternately displayed when an HB alarm or HS alarm is ON.
Status display message*	WR	While one or more of the work bits (WR1 to WR8) is ON, the message for the highest bit number that is ON is alternately displayed with the corresponding bit number.

Note: The default is OFF.
*   Selection is possible only with the E5DC, E5DC-B and E5GC. (The E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

Example: When STOP Is Selected for the PV Status Display Function
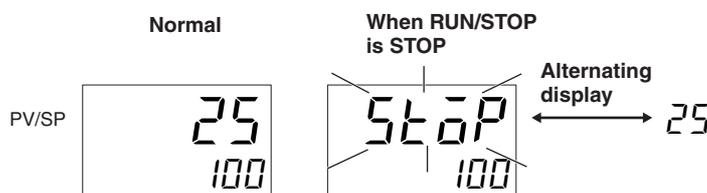

● SV Status Display Function (Advanced Function Setting Level)

The SP, Manual MV, or blank on the No. 2 display in the PV/SP, PV, or PV/Manual MV Display and the control or alarm status specified for the SV status display function are alternately displayed in 0.5-s cycles.[1]

- PV
- PV/SP[2]
- PV/Manual MV (Valve Opening)
- PV/SP/Manual MV (Valve Opening)

[1] This includes the displays specified with the PV/SP No. 1 and PV/SP No. 2 Display Selection parameters.
[2] This includes when the PV/SP is selected for the Monitor/Setting Item parameter.

Set value	Display	Function
OFF	ōFF	No SV status display
Manual	MANU	MANU is alternately displayed during manual control.
Stop	StōP	STOP is alternately displayed while operation is stopped.
Alarm 1	ALM1	ALM1 is alternately displayed during Alarm 1 status.
Alarm 2	ALM2	ALM2 is alternately displayed during Alarm 2 status.
Alarm 3	ALM3	ALM3 is alternately displayed during Alarm 3 status.
Alarm 4	ALM4	ALM4 is alternately displayed during Alarm 4 status.
Alarm 1 to 4 OR status	ALM	ALM is alternately displayed when Alarm 1, 2, 3, or 4 is set to ON.
Heater Alarm	HA	HA is alternately displayed when an HB alarm or HS alarm is ON.
Status display message*	WR	While one or more of the work bits (WR1 to WR8) is ON, the message for the highest bit number that is ON is alternately displayed with the corresponding bit number.

Note: The default is OFF.

* Selection is possible only with the E5DC, E5DC-B and E5GC. (The E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

Example: When ALM1 Is Selected for the SV Status Display Function

Normal   **When ALM1 Is ON**

PV/SP   `25` / `100`   `25` / `ALM1` ←Alternating display→ `100`
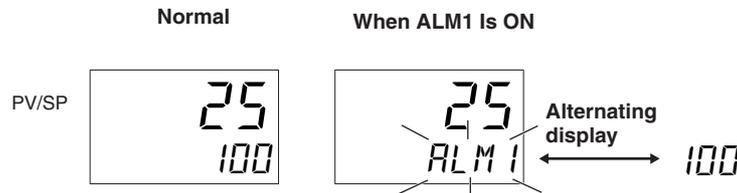

🖿 **Additional Information**

Priority of Flashing and Alternating Displays on No. 2 Display
The priority for flashing and alternating displays is as follows:
(1)   Alternating display with SV status display
(2)   Alternating display during program end output

The following procedure sets the PV Status Display Function parameter to ALM1.

Operating Procedure

1	Press the ◉ Key several times in the Advanced Function Setting Level to display PVSt (PV Status Display Function).	Advanced Function Setting Level `PVSt` `ōFF` PV Status Display Function
2	Press the ⌃ or ⌄ Key to select ALM1 (alarm 1). The default is ōFF.	`PVSt` `ALM1`

3	If the Alarm 1 status is ON in Operation Level, the PV and ALM1 (Alarm 1) will be alternately displayed.	Operation Level
		
		`25`←→`ALM1`
		`100`
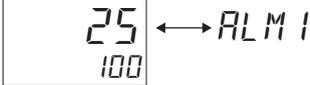

5-20 Using a Remote SP

A remote SP can be used on models that have a remote SP input. A remote SP uses a remote SP input that is scaled between the remote SP upper and lower limits as the SP. (The remote SP can be 4 to 20 mA DC, 0 to 20 mA DC, 1 to 5 VDC, 0 to 5 VDC, or 0 to 10 VDC.) Set the Remote SP Enable parameter (Advanced Function Setting Level) to ON and select a remote SP in the SP Mode parameter (Adjustment Level) to enable using a remote SP. You can also use an event input to switch to SP Mode.

Parameter	Setting range	Unit	Default	Level
Remote SP Enable (*RSPU*)	OFF: Disable, ON: Enable	None	OFF	Advanced Function Setting Level
Remote SP Input (*RS-t*)	4 to 20 mA DC, 0 to 20 mA DC, 1 to 5 VDC, 0 to 5 VDC, or 0 to 10 VDC	---	4 to 20 mA DC	Advanced Function Setting Level
Remote SP Upper Limit (*RSPH*)	Temperature input: Input setting range lower limit to Input setting range upper limit Analog input: Scaling lower limit to Scaling upper limit	EU	1300	Advanced Function Setting Level
Remote SP Lower Limit (*RSPL*)		EU	–200	Advanced Function Setting Level
SP Tracking (*SPtR*)	OFF: Disable, ON: Enable	None	OFF	Advanced Function Setting Level
SP Mode (*SPMd*)	LSP: Local SP, RSP: Remote SP	None	LSP	Adjustment Level
Remote SP Monitor (*RSP*)	Remote SP lower limit –10% to Remote SP upper limit +10%	EU	---	Operation Level
Remote SP Input Shift (*RSS*)	Temperature input: –199.9 to 999.9	C or F	0.0	Adjustment Level
	Analog input: –1,999 to 9,999	EU	0	
Remote SP Input Slope Coefficient (*RSRt*)	0.001 to 9.999	None	1.000	Adjustment Level

Precautions for Correct Use

- To use the remote SP function, the ST (self-tuning) parameter must be set to OFF (default: ON).
  If the ST parameter is set to ON, the settings for the remote SP function will not be displayed. When the ST (self-tuning) parameter is turned ON, the SP Mode parameter is forcibly set to LSP.
- The remote SP input is not accepted during autotuning. Autotuning is executed for the remote SP at the beginning of autotuning.
- Changes in the remote SP value are not used as conditions for resetting the standby sequence.

● **Remote SP Scaling**

- You can scale the remote SP input for the PV input range with the remote SP upper and lower limits.
- The remote SP input can be from the remote SP lower limit –10% to the remote SP upper limit +10%. Input values outside of this range are treated as out-of-range input values (RSP input errors) and clamped to the upper or lower limit. The RSP indicator will flash in Remote SP Mode. Also, the Remote SP Monitor will flash on the No. 2 display in any SP Mode.
- When you use the remote SP input value as the control SP, it is restricted by the set point upper limit and the set point lower limit.

Remote SP Input of 4 to 20 mA
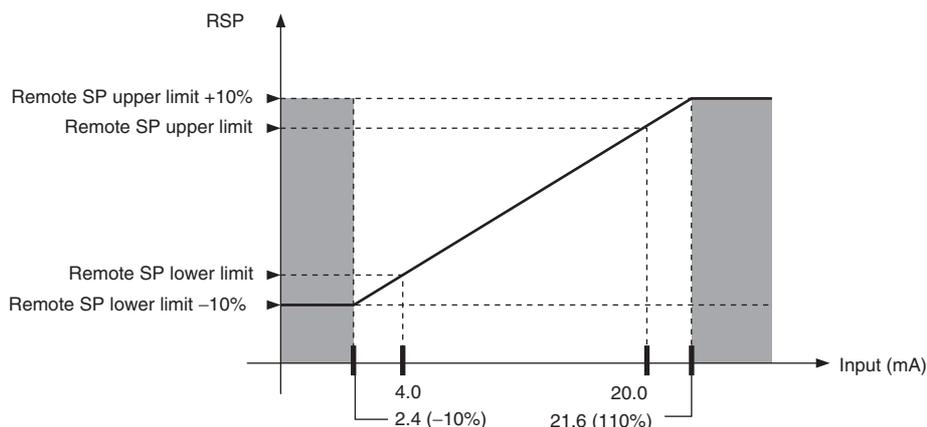

● **SP Mode**

The SP mode is used to switch between local SP and remote SP. When a remote SP is selected in SP mode, the RSP single indicator will light.

● **Remote SP Monitor**

- You can check the remote SP input value in the Remote SP Monitor parameter (Operation Level).
- If a remote SP is selected for the SP Mode parameter, the remote SP input value will be displayed as the SP in PV/SP displays. This remote SP input value will be restricted as the control SP by the set point upper limit and the set point lower limit.

● **SP Tracking**

- If the SP tracking function is enabled, the local SP inherits the remote SP value after switching from remote SP to local SP. To enable the SP tracking function, set the SP Tracking parameter to ON.
- SP tracking operates as follows:
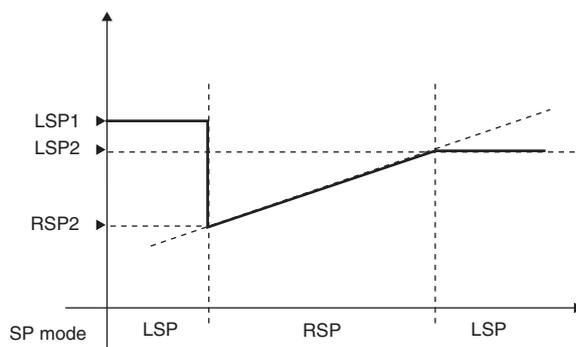

(1) **Switching to remote SP when the SP is LSP1 will result in switching to RSP2.**

(2) **The operation will proceed according to remote SP inputs.**

(3) **If the SP tracking function is enabled, the SP will become LSP2 after switching to local SP. If the SP tracking function is disabled, the SP will remain as LSP1.**

- If the SP ramp function is enabled when switching from local SP to remote SP, SP tracking will operate.

● **Remote SP Input Compensation**

You can set a remote SP input shift and an SP input slope compensation coefficient to compensate the remote SP input.

5-21 Controlling Valves (Can Be Used with a Position-proportional Model)

You can use position-proportional control to control a value with a control motor. With position-proportional control, you can use either close control or floating control.

🖊 **Precautions for Correct Use**

The following functions cannot be used with position-proportional control.
- ON/OFF control
- P and PD control during floating control
- 40% AT during floating control
- ST
- LBA
- HB and HS alarms

● **Control Method**

Close control	A potentiometer is connected and the valve opening and travel time are used to control valve operation. Always perform motor calibration before actual operation.
Floating control	Valve operation is controlled without a potentiometer by estimating the valve opening from the travel time. Always set the travel time before actual operation.

● **Motor Calibration**

The valve position is calibrated and the travel time from completely open to completely closed is set automatically. You can then check the valve opening with the Valve Opening Monitor parameter. If you set the Motor Calibration parameter to ON, the valve will open completely and close completely, and then the setting of the parameter will change to OFF when the measurement has been completed. "ERR" will be displayed if any of the following errors occurs during execution. If an error occurs, check the wiring and other factors and execute motor calibration again.
- The potentiometer input value does not change or changes backward between completely open and completely closed because the wiring is wrong.
- The value of the potentiometer input is incorrect because of a broken wire, noise, or other factor.

Note: Do not change to any other parameter during calibration.

● **Valve Opening Monitor**

You can monitor the valve opening.
You can select either the measured opening or the estimated opening only with the E5EC-PR□-8□□ or E5AC-PR□-8□□. (The Digital Controller must be manufactured in August 2014 or later (version 2.2 or higher).)

Measured opening	The valve opening that was measured with a potentiometer is displayed. To monitor the measured opening of the valve, select the measured opening for the Valve Opening Monitor Selection parameter, connect a potentiometer, and then perform motor calibration. Application: Use this setting when you want to display the actual opening.

	The valve opening estimated by the Digital Controller is displayed. To monitor the estimated opening of the valve, select the estimated opening for the Valve Opening Monitor Selection parameter and set the travel time.
Estimated opening	Application: Use this setting when a potentiometer is not connected and you want to display an approximate opening. *1 After the power supply is turned ON, the Valve Opening Monitor will start at 0%. *2 The estimated valve opening will not agree with the actual valve opening. If you want to temporarily align the estimated opening with the actual opening, used the following operation. In Manual Mode, turn ON the close output by pressing the DOWN Key for at least the time set for the travel time. (Refer to *5-12 Performing Manual Control* for the method to change to the Manual Control Level.)

*1   For close control, you can select only the measured opening. For floating control, you can select either the measured opening or the estimated opening.

*2   The estimated valve opening will be different from the actual opening. Use the measured opening to check the actual valve opening.

● Travel Time

The Travel Time parameter is set to the time from when the valve is completely open until it is completely closed. The Travel Time parameter is set automatically when motor calibration is performed.

Note: With the E5EC/E5AC-PR□-0□□, you cannot monitor the valve opening simply by setting the Travel Time parameter. To monitor the valve opening, always perform motor calibration.

● Position Proportional Dead Band and Open/Close Hysteresis

When the difference between the MV and the valve opening is within the value that is set for the Position Proportional Dead Band, opening or closing the valve will be stopped to prevent the valve from deteriorating. The Open/Close Hysteresis parameter is used to offset the ON and OFF points when opening and closing the valve. Refer to the following figure for details.
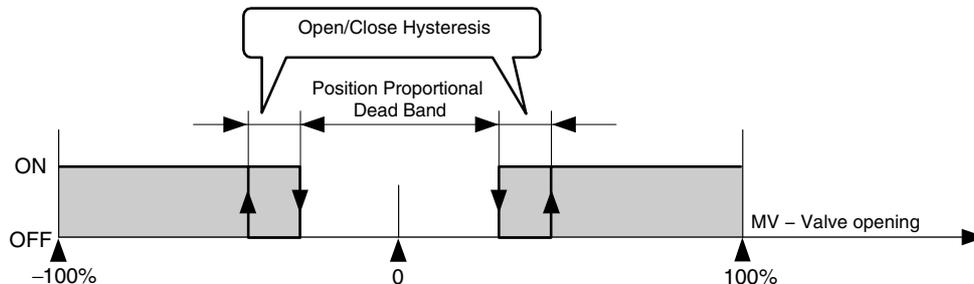

● PV Dead Band

When the PV enters the PV dead band, any unnecessary output is stopped to prevent the valve from deteriorating.
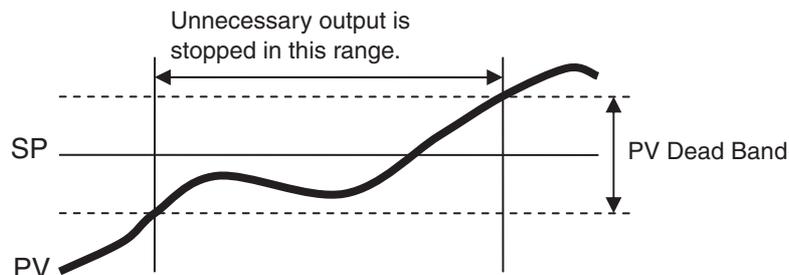

● **Manual MV, MV at Stop, and MV at PV Error**

Refer to the following sections.
Manual PV: *5-12-1 Manual MV*
MV at Stop and MV at PV Error: *5-15 Output Adjustment Functions*

● **FB Moving Average Count**

You can set the moving average count for the FB input. The data after moving average processing is illustrated in the following figure.
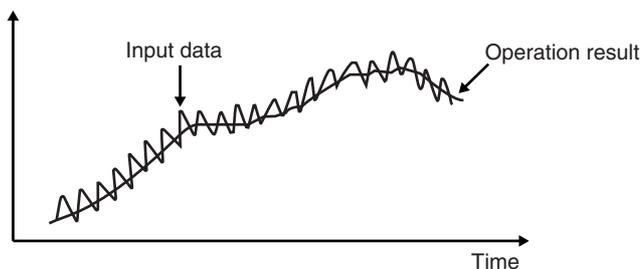

Use a moving average to suppress rapid changes in the FB input.

* You can use this parameter only with E5EC/E5AC-PR□-8□□ version 2.2 (factory shipments in August 2014 or later).

● **Related Displays and Parameters**

Parameter name	Display	Set (monitor) values		Default	Level
Close/Floating	*CLFL*	FLOT: Floating control CLOS: Close control		FLOT	Initial Setting Level
Valve Opening Monitor Selection[*1][*2]	*VMSL*	MEAS: Measured opening		MEAS	
		ESTM: Estimated opening			
Motor Calibration	*CALb*	OFF ON ERR (Error occurred.)		OFF	
Travel Time	*Mot*	0 to 999 (s)		30	
Valve Opening Monitor	*V-M*	Measured opening	Normal operation: −10.0% to 110.0% Error:---[*3]	---	Operation Level
		Estimated opening[*1]	0.0% to 100.0%	---	
Position Proportional Dead Band	*db*	Close control: 0.1% to 10.0%		4.0	Adjustment Level
		Floating control: 0.1% to 10.0%		2.0

FB Moving Average Count	*PMAV*	OFF, 2, 4, 8, 16, or 32		16	Advanced Function Setting Level
PV Dead Band	*P-db*	0 to 9999		0.0	

*1 You can use this selection only with the E5EC-PR□-8□□ or E5AC-PR□-8□□. (The Digital Controller must be manufactured in August 2014 or later (version 2.2 or higher).)
*2 You can use this setting only for floating control.
*3 Motor calibration not performed, potentiometer not connected, or potentiometer input error.

5-22 Logic Operations 000

5-22-1 The Logic Operation Function (CX-Thermo)

- The logic operation function logically calculates as 1 or 0 the Digital Controller status (alarms, SP ramp, RUN/STOP, auto/manual, etc.) and the external event input status, and outputs the results to work bits. The work bit status can be output to auxiliary or control outputs, and operating status can be switched according to the work bit status.
- Work bit logic operation can be set from 1 to 8. Set them to *No operation (Always OFF)* (the default) when the work bits are not to be used.
- When logic operations are being used, a dot will be displayed between the first two digits on the No. 2 display of the Adjustment Level display

Adjustment Level

Adjustment level display
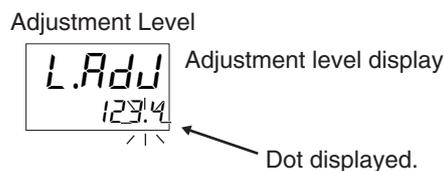

Dot displayed.

Note: The four numeric digits to identify the product code are displayed in the No. 2 display.

5-22-2 Using Logic Operations

Logic operations are set using the CX-Thermo.

● Starting Logic Operations

There are two ways to start logic operations.

- Select *Logic Operation Editor* from the CX-Thermo tree, and click the **Start** Button.
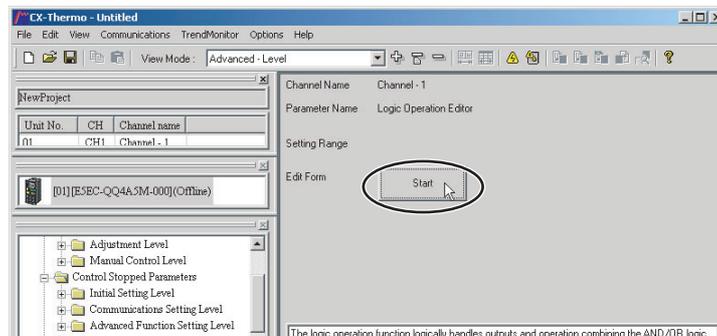

- Select ***Logic Operation Editor*** from the CX-Thermo Options Menu.
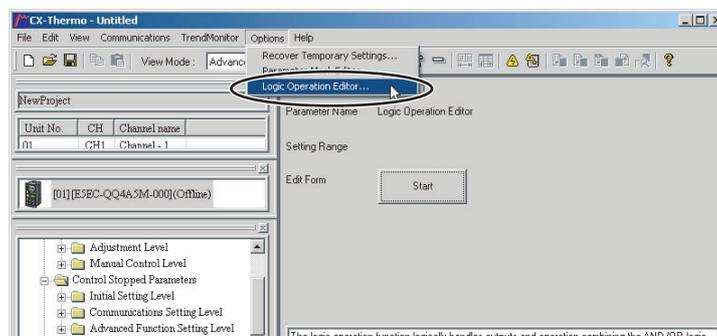

● **Making the Settings**

The following display will appear on the Logic Operation Editor Setting Window. Set each of the parameters.
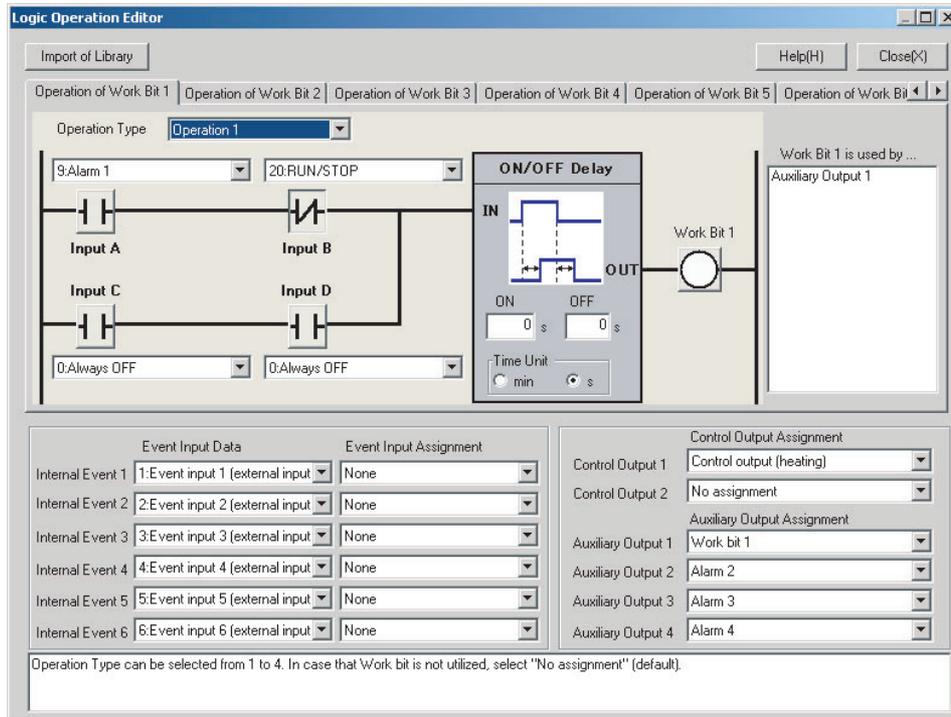

(1)   **Displaying the Library Import Dialog Box**

Logic operation samples for specific cases are set in the library in advance. Examples of settings for specific cases are loaded by selecting them from the library list and clicking the **OK** Button.

Example: Selecting Library 1
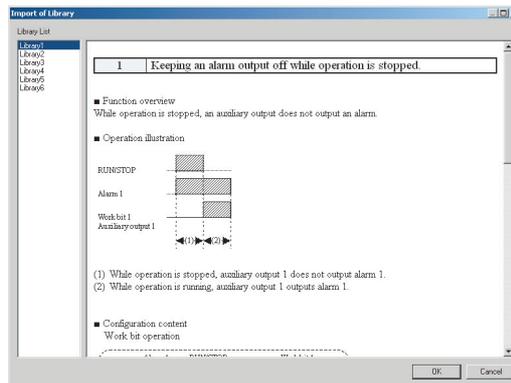

(2)   **Switching Work Bit Operations**

Select the work bit logic operations from the Operation of Work Bit 1 to Operation of Work Bit 8 Tab Pages.

(3) Selecting the Operation Type

From one to four operations are supported. If work bits are not to be used, set them to *No operation (Always OFF)* (the default).

- No operation (Always OFF)
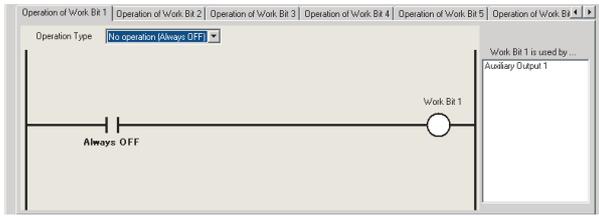

- Operation 1
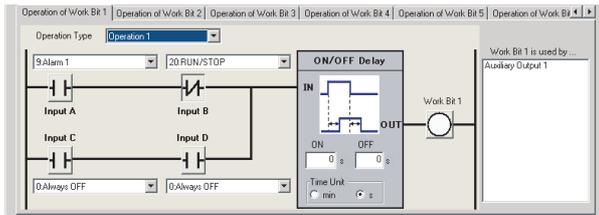

(A and B) or (C and D)
When conditions A and B or conditions C and D are satisfied

- Operation 2
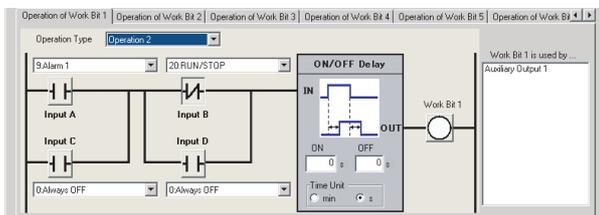

(A or C) and (B or D)
When condition A or C and condition B or D are satisfied

- Operation 3
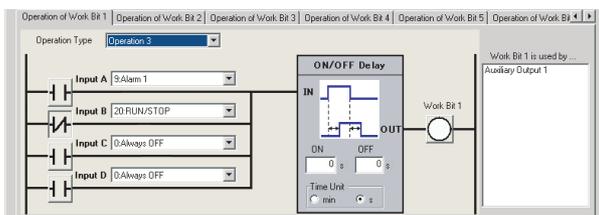

A or B or C or D
When condition A, B, C or D is satisfied

- Operation 4
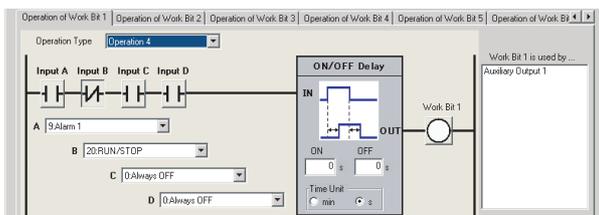

A and B and C and D
When conditions A, B, C and D are all satisfied

(4) Selecting Input Assignments

Select the input assignment for the work bit logic operation from the following settings.

Parameter name	Setting range
Work Bit 1 Input Assignment A	0. Always OFF
	1. Always ON
	2. ON for one cycle when power is turned ON
	3. Event input 1 (external input)*
	4. Event input 2 (external input)*
	5. Event input 3 (external input)*
	6. Event input 4 (external input)*
	7. Event input 5 (external input)*
	8. Event input 6 (external input)*
	9. Alarm 1
	10. Alarm 2
	11. Alarm 3
	12. Alarm 4
	13. Control output (heating)
	14. Control output (cooling)
	15. Input error
	16. RSP input error
	17. HB (heater burnout) alarm
	18. HS alarm
	19. Auto/Manual
	20. RUN/STOP
	21. RSP/LSP
	22. Program start
	23. AT Execute/Cancel
	24. SP ramp operating
	25. Multi-SP No. switching bit 0
	26. Multi-SP No. switching bit 1
	27. Multi-SP No. switching bit 2
	28. Program end output
	29. Work bit 1
	30. Work bit 2
	31. Work bit 3
	32. Work bit 4
	33. Work bit 5
	34. Work bit 6
	35. Work bit 7
	36. Work bit 8
Work Bit 1 Input Assignment B	Same as for work bit 1 input assignment A
Work Bit 1 Input Assignment C	Same as for work bit 1 input assignment A
Work Bit 1 Input Assignment D	Same as for work bit 1 input assignment A
to	to
Work Bit 8 Input Assignment D	Same as for work bit 1 input assignment A

*   The event inputs that can be used depend on the Digital Controller model.

(5) Switching between Normally Open and Normally Closed for Inputs A to D

Click the condition to switch between normally open and normally closed inputs A to D.

Normally open	Normally closed
⊣ ⊢	⊣/⊢

(6) Switching between Normally Open and Normally Closed for Work Bits

Click the condition to switch between normally open and normally closed work bits.

Normally open	Normally closed
─◯─	─⌀─

(7) Setting ON Delay Times

When an input with ON delay turns ON, the output will turn ON after the set delay time has elapsed. The setting range is 0 to 9,999. The default is 0 (disabled).

(8) Setting OFF Delay Times

When an input with OFF delay turns OFF, the output will turn OFF after the set delay time has elapsed. The setting range is 0 to 9,999. The default is 0 (disabled).

(9) Switching ON/OFF Delay Time Unit

Select either seconds or minutes for the ON/OFF delay time unit. The default is seconds.

If the Work Bit ∗ Operation Type is set to anything but OFF, the Work Bit ∗ ON Delay and Work Bit ∗ OFF Delay will be displayed in the Adjustment Level and the settings can be changed with key operations.

(10) Changing Event Input Data

Select the event input conditions from the following setting ranges.

Parameter name	Setting range
Internal event 1	0. Not assigned.
	1. Event input 1 (external input)
	2. Event input 2 (external input)
	3. Event input 3 (external input)
	4. Event input 4 (external input)
	5. Event input 5 (external input)
	6. Event input 6 (external input)
	7. Work bit 1
	8. Work bit 2
	9. Work bit 3
	10. Work bit 4
	11. Work bit 5
	12. Work bit 6
	13. Work bit 7
	14. Work bit 8
Internal event 2	Same as for Event Input Data 1.
Internal event 3	Same as for Event Input Data 1.
Internal event 4	Same as for Event Input Data 1.
Internal event 5	Same as for Event Input Data 1.
Internal event 6	Same as for Event Input Data 1.

Note: The internal event data can be changed from the default setting even if there is no event input terminal (external input). By changing the default setting, the event input assignment parameters will be displayed at the Digital Controller display and can be set from the Digital Controller.

(11) Changing the Event Input Assignment Function

Select the setting for the internal event assignment.

When a work bit is selected as event input data, Communications Write Enable/Disable cannot be assigned to an event input.

(12) Changing Control Output and Auxiliary Output Settings

Control output and auxiliary output assignments can be changed. The items that can be changed depend on the Digital Controller model. For details, refer to *4-6 Setting Output Specifications*.

Assigning a work bit to either a control output or to an auxiliary output is also considered to be the same as assigning an alarm. For example, if work bit 1 is set for the Auxiliary Output 1 Assignment parameter, then alarms 1 to 4 have been assigned.

(13) Displaying Parameter Guides

A description of the parameters can be displayed.

(14) Displaying the Work Bit Use Destinations

Display a list of destinations where the work bits are used.

Operating Procedure

This procedure uses event input 2 to change to RUN or STOP.
Event input 2 ON: RUN
Event input 2 OFF: STOP
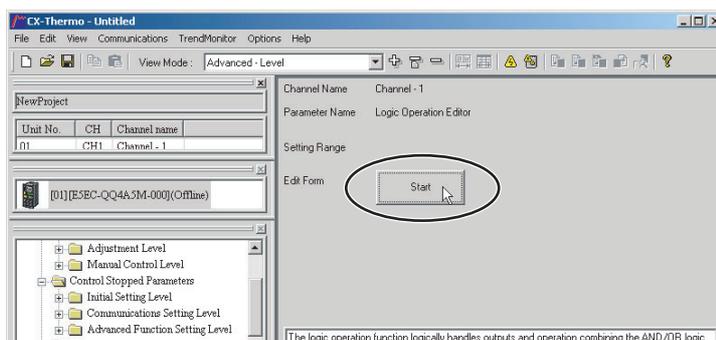

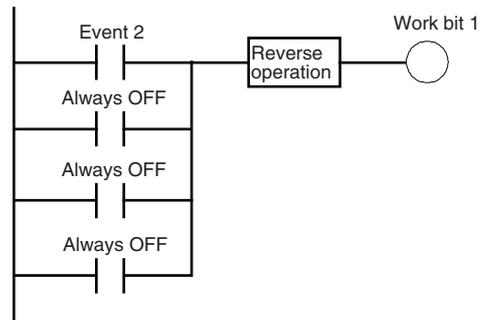

1. Select *Logic Operation Editor* from the CX-Thermo tree, and click the **Start** Button.
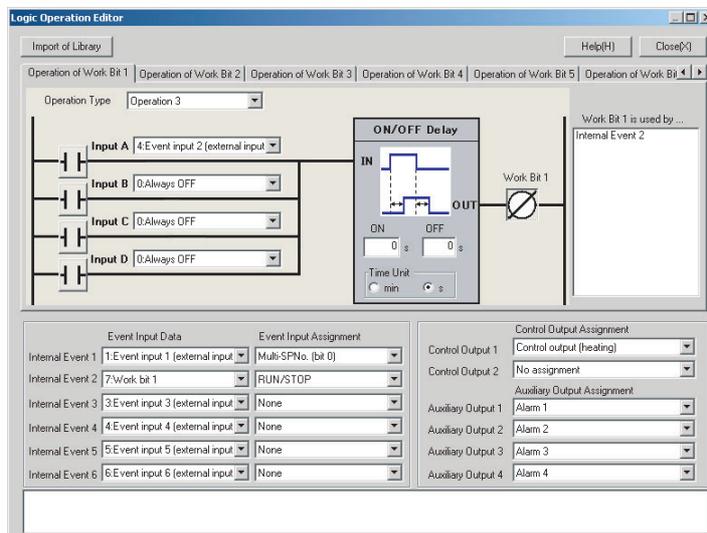

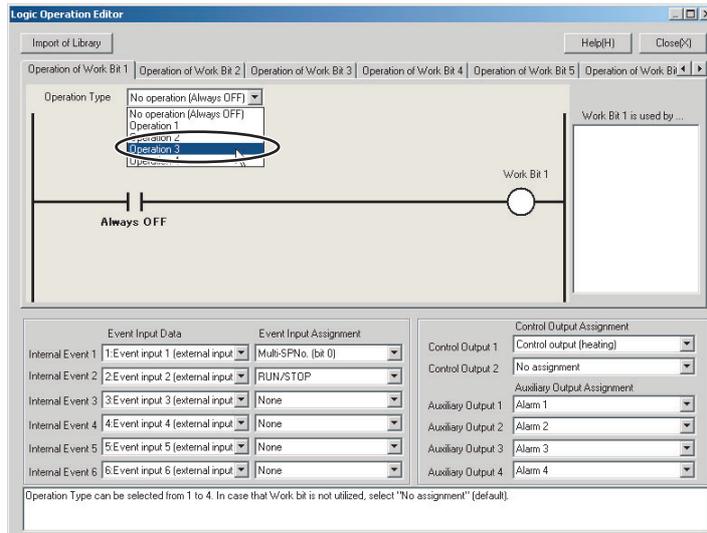

2. The Logic Operation Editor will be displayed. Confirm that the screen for work bit 1 is displayed, and select *Operation 3* from the *Operation Type* Field.

3. Set the operation by selecting one of the following:
   Work bit 1 input assignment A = 4: Event input 2 (external input)
   Work bit 1 input assignment B = 0: Always OFF
   Work bit 1 input assignment C = 0: Always OFF
   Work bit 1 input assignment D = 0: Always OFF

4. Invert work bit 1. Click –◯– (Normally open) to change it to –⊘– (Normally closed).

5. Assign RUN/STOP to event input 2. Set "5: Work bit 1" for the event input data for event input 2, and set "RUN/STOP" for the assignment function.

6. Closing the Logic Operation Editor Dialog Box
   Click the **Close** Button.
   This completes the procedure for setting parameters using the CX-Thermo. Transfer the settings to the Digital Controller to set the Digital Controller. Refer to CX-Thermo help for the procedure to transfer the settings.

Operating Procedure

This procedure outputs alarm 1 status to auxiliary output 1 during operation (RUN). A library object is used to make the setting.
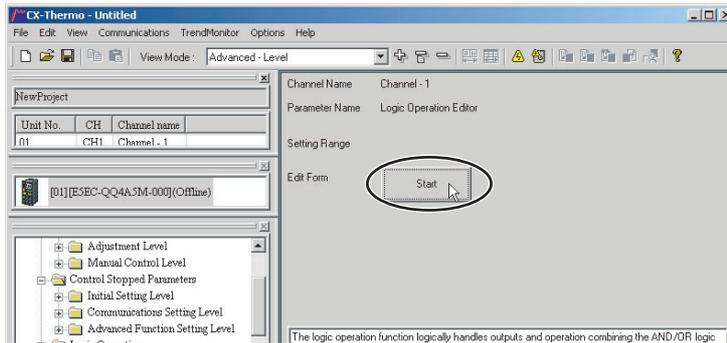

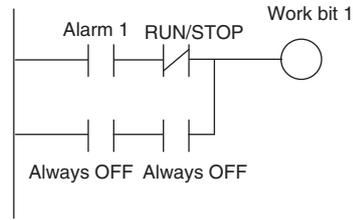

1. Select *Logic Operation Editor* from the CX-Thermo tree, and click the **Start** Button.
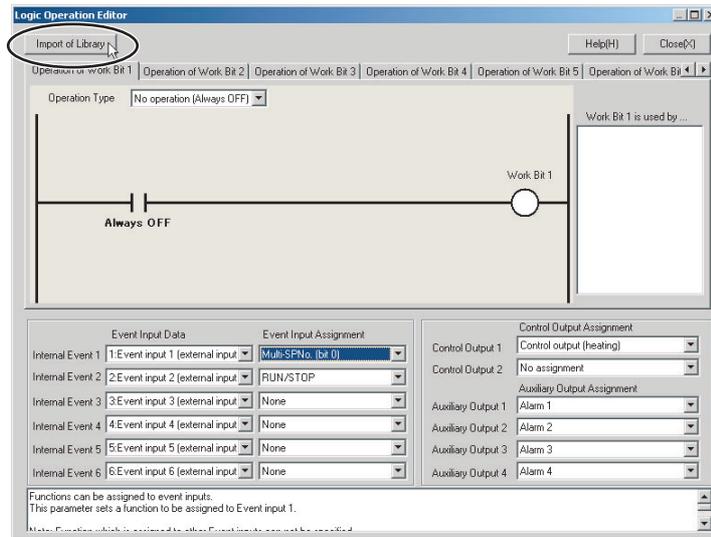

2. Click the **Import of Library** Button.
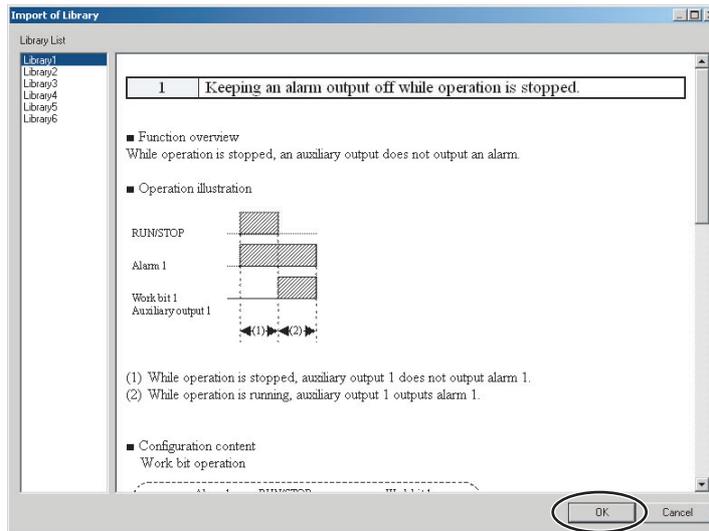

3. Select *Library 1* from the library list, and then click the **OK** Button.
   Confirm the following settings, and then click the **OK** Button.
   Work bit 1 operation type: Operation 1
   Work bit 1 input assignment A = 7: Alarm 1
   Work bit 1 input assignment B = 19: Invert for RUN/STOP
   Work bit 1 input assignment C = 0: Always OFF
   Work bit 1 input assignment D = 0: Always OFF
   Auxiliary output 1 = Work bit 1

4. Closing the Logic Operation Editor Dialog Box
   Click the **Close** Button.
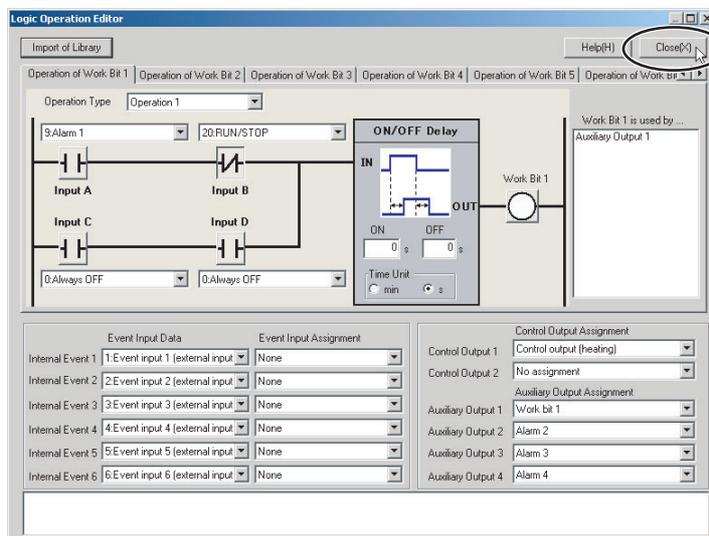

This completes the procedure for setting parameters using the CX-Thermo. Transfer the settings to the Digital Controller to set the Digital Controller. Refer to CX-Thermo help for the procedure to transfer the settings.

5-22-3   Using Status Display Messages

You can use a status display message only with the E5DC, E5DC-B* or E5GC.

*   The E5DC must be manufactured in July 2014 or later (version 2.2).

You can display status display messages using the work bits. While one or more of the work bits (WR1 to WR8) is ON, the message for the highest bit number that is ON is alternately displayed with the corresponding bit number.

Status display messages are displayed when WR (status display message) is selected for the PV status display or SV status display function (Advanced Function Setting Level).

You can set status display messages with CX-Thermo version 4.62 or higher.

Example: When Work Bit 1 (WR1) Is ON for the PV Status Display Function (Registered Message: WR1)
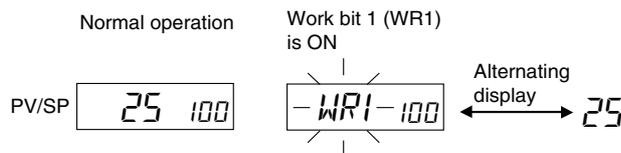

● **Status Display Message Specifications**
  • You can use up to four of the following characters: A to Z, 0 to 9, spaces, and hyphens.
  • If nothing is entered in the message field or if all spaces are set, the message is disabled and nothing is displayed.

● **Operating Procedure**

  1 On the Logic Operator Editor, enter the message in the input field for the work bit as shown in the following figure.
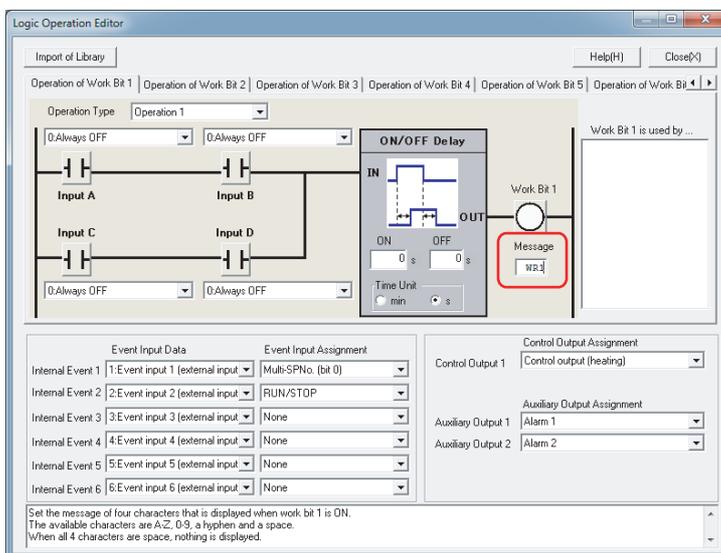

The default message settings for the work bits are given in the following table.

Name	Default*
Work Bit 1 Status Display Message	_WR1
Work Bit 2 Status Display Message	_WR2
Work Bit 3 Status Display Message	_WR3
Work Bit 4 Status Display Message	_WR4
Work Bit 5 Status Display Message	_WR5
Work Bit 6 Status Display Message	_WR6
Work Bit 7 Status Display Message	_WR7
Work Bit 8 Status Display Message	_WR8

*   Underbars in the default messages indicate spaces.

📝 **Additional Information**

Status Display Message Priority
The status display message for the highest bit number that is ON is given priority.

5-23 Initializing Settings

You can set the Parameter Initialization parameter (Advanced Function Setting Level) to $FA\mathcal{L}t$ (initialize parameters to defaults given in the manual) to return all of the parameter settings to the factory defaults.
The default is OFF.

Operating Procedure

● Moving to the Advanced Function Setting Level

* Refer to *4-1-4 Moving to the Advanced Function Setting Level* for the procedure to enter the Advanced Function Setting Level if you have not done so before.

1 **Press the ⊟ Key for at least 3 seconds in the Operation Level.** The No. 1 display will flash when the key is pressed for 1 s or longer. The display will change from the Operation Level to the Initial Setting Level.	Operation Level **25** **0**
2 **Press the ◉ Key several times in the Initial Setting Level to display the Move to Advanced Function Setting Level parameter.** $AM\bar{o}V$ (Move to Advanced Function Setting Level) will be displayed.	Initial Setting Level **$\bar{L}N-t$** Input Type **5**
3 **Press the ⊘ and ⊙ Keys at the Move to Advanced Function Setting Level parameter and then enter $-l69$.** * You can hold the ⊘ or ⊙ Key to increment or decrement the set value quickly.	Initial Setting Level **$AM\bar{o}V$** Move to Advanced Function Setting Level **0**
4 **Press ◉ Key once or wait for 2 seconds or longer without doing anything. You will move to the Advanced Function Setting Level and init (Parameter Initialization) will be displayed.**	Move to Advanced Function Setting Level **$AM\bar{o}V$** **$-l69$** −169: Password to move to Advanced Function Setting Level
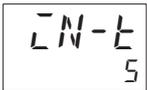

● Parameter Initialization

1 **Display the first parameter, $\bar{L}N\bar{L}t$ (Parameter Initialization) in the Advanced Function Setting Level.**	Advanced Function Setting Level **$\bar{L}N\bar{L}t$** Parameter Initialization **$\bar{o}FF$**
2 **Press the ⊘ or ⊙ Key to select $FA\mathcal{L}t$ (initialize to the factory settings described in the manual). The parameter settings will be initialized.** The default is off.	**$\bar{L}N\bar{L}t$** **$FA\mathcal{L}t$**

* The parameter mask settings are not initialized when other settings are initialized. Refer to *Parameter Mask Enable* on page 6-6.

6

Parameters

6-1   Conventions Used in this Section

● **Meanings of Icons Used in this Section**

Function	Describes the functions of the parameter.
Setting	Describes the setting range and default of the parameter.
Monitor	Used to indicate parameters used only for monitoring.
Operation	Describes the parameter settings, such as those for Operation Commands, and procedures.
See	Used to indicate information on descriptions in which the parameter is used or the names of related parameters.

● **About Related Parameter Displays**

Parameters are displayed only when the conditions for use given on the right of the parameter heading are satisfied. Protected parameters are not displayed regardless of the conditions for use, but the settings of these parameters are still valid.

AE	**AT Execute/Cancel**	**The E5□C must be in operation, and control must be 2-PID control.**
Displayed symbol	Parameter name	Conditions for use
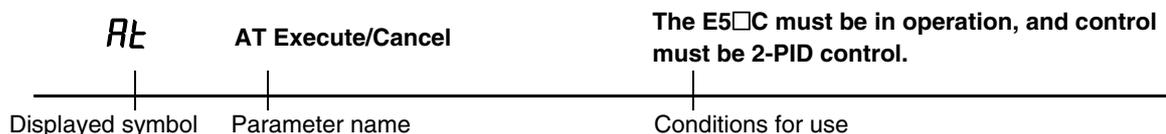

● **The Order of Parameters in This Section**

Parameters are described level by level.
The first page of each level describes the parameters in the level and the procedure to switch between parameters.

● **Alarms**

It will be specified in this section when alarms are set for the Control Output 1 or 2 Assignment parameters, or for the Auxiliary Output 1 to 4 Assignment parameters. For example, when alarm 1 is set for the Control Output 1 Assignment parameter, it will be specified that alarm 1 is assigned.
Assigning a work bit to either control output 1 or 2 or to auxiliary output 1 to 4 is also considered to be the same as assigning an alarm. For example, if work bit 1 is set for the Auxiliary Output 1 Assignment parameter, then alarms 1 to 4 have been assigned.

6-2   Protect Level

Four levels of protection are provided on the E5□C, operation/adjustment protect, initial setting/communications protect, setting change protect, and PF key protect. These protect levels prevent unwanted operation of the keys on the front panel in varying degrees.
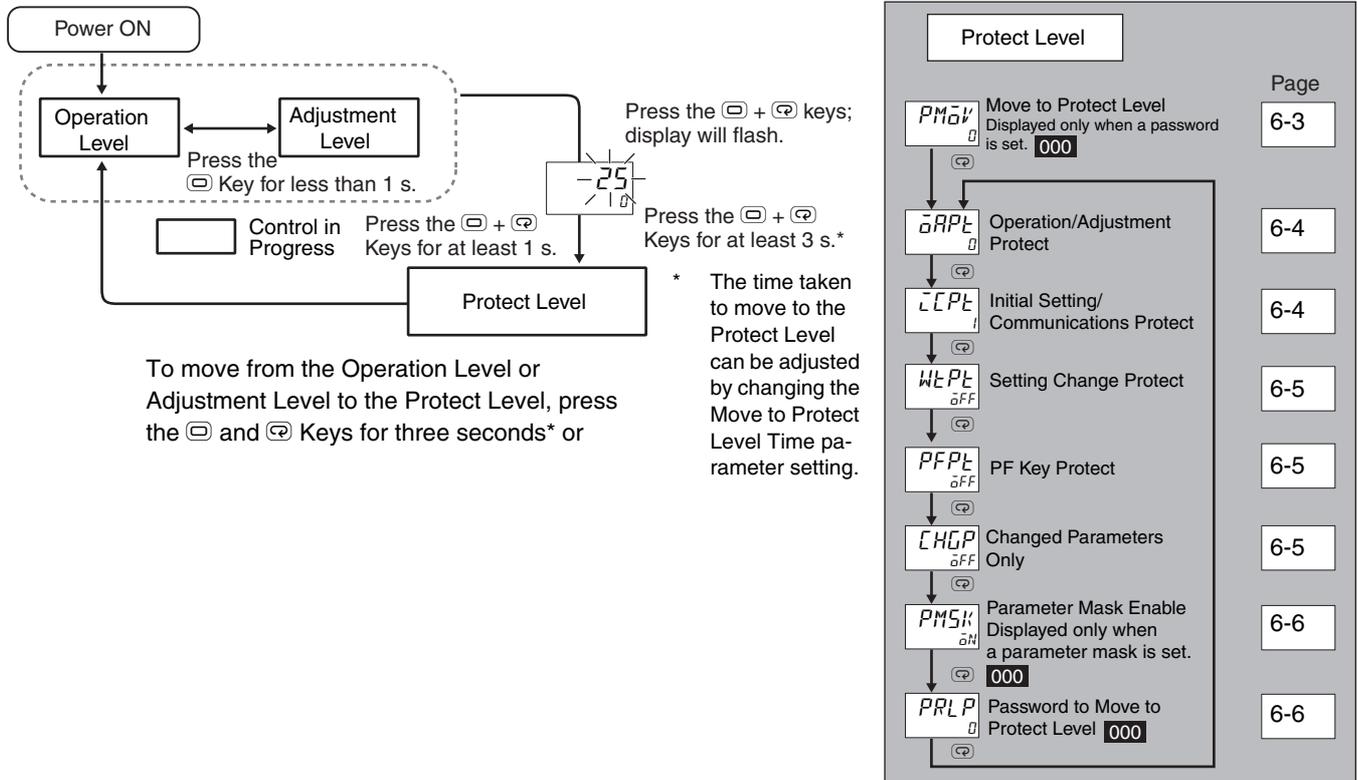

Parameters that are protected will not be displayed and their settings cannot be changed.

PMŌV   Move to Protect Level 000   The Password to Move to Protect Level password must not be set to 0.

The password to move to the Protect Level is entered for this parameter.

Function
- If the correct password is entered, the Operation/Adjustment Protect parameter is displayed.

See

● **Related Parameters**

Password to Move to Protect Level (Protect Level): page 6-6

⎺RPᴌ   **Operation/Adjustment Protect**

ᒡᒟPᴌ   **Initial Setting/Communications Protect**

These parameters specify the range of parameters to be protected.

● **Operation/Adjustment Protect**

Function

Setting

Level		Set value			
		0 (default)	**1**	**2**	**3**
Operation Level	PV	Can be displayed	Can be displayed	Can be displayed	Can be displayed
	PV/SP	Can be displayed and changed	Can be displayed and changed	Can be displayed and changed	Can be displayed
	Others	Can be displayed and changed	Can be displayed and changed	Cannot be displayed and moving to other levels is not possible	Cannot be displayed and moving to other levels is not possible
Adjustment Level		Can be displayed and changed	Cannot be displayed and moving to other levels is not possible	Cannot be displayed and moving to other levels is not possible	Cannot be displayed and moving to other levels is not possible

• Parameters are not protected when the set value is set to 0.

● **Initial Setting/Communications Protect**

This protect level restricts movement to the Initial Setting Level, Communications Setting Level, and Advanced Function Setting Level.

Set value	Initial setting level	Communications setting level	Advanced function setting level
0	Possible to reach	Possible to reach	Possible to reach
1 (default)	Possible to reach	Possible to reach	Not possible to reach
2	Not possible to reach	Not possible to reach	Not possible to reach

---

WtPt   **Setting Change Protect**   **The Event Input Assignment 1 to Event Input Assignment 6 parameters must not be set to enable/disable setting changes.**

Changes to settings using key operations are restricted.

● **Change Setting Protect**

Function

This parameter is not displayed if the Event Input Assignment 1 to Event Input Assignment 6 parameters are set to enable/disable setting changes.

Setting

Set value	Description
OFF (default)	Settings can be changed using key operations.
ON	Settings cannot be changed using key operations. (The protect level settings, however, can be changed.)

• The all protect indication (**O┓**) will light when setting is ON.

PFPt   **PF Key Protect**

● **PF Key Protect**

Function

This parameter enables and disables PF Key operation.

Setting

Set value	Description
OFF (default)	PF Key enabled
ON	PF Key disabled (Operation as a function key is prohibited.)

CHGP   **Changed Parameters Only**

Function

This parameter allows you to display only the parameters that have been changed from their default settings.

Setting

Setting range	Default
$\bar{o}N$: Enabled, $\bar{o}FF$: Disabled	$\bar{o}FF$

*   If the setting of a parameter is changed back to its default setting, it will no longer be displayed. To display it again, set the Changed Parameters Only parameter to OFF.

PMSK   **Parameter Mask Enable** `000`   **This parameter is displayed only when a parameter mask has been set from the Setup Tool.**

Function

- This parameter turns the parameter mask function ON and OFF.
- The parameter mask settings are not initialized when other settings are initialized.
  Use the Setup Tool to initialize the parameter mask settings.

Setting

Setting range	Default
ōN: Enabled, ōFF: Disabled	ōN

*   A parameter mask can be used to hide the displays of parameters that are not needed. The parameter mask function is provided by the Setup Tool.
Setup Tool: CX-Thermo (EST2-2C-MV4)

PRLP   **Password to Move to Protect Level** `000`

This parameter is used to set the password to move to the Protect Level.

Function

- To prevent setting the password incorrectly, the ⊗ and ⊜ Keys or ⊗ and ⊜ Keys must be pressed simultaneously to set the password.

Setting

Setting range	Default
−1999 to 9999	0

Set this parameter to 0 when no password is to be set.

● **Related Parameters**

See

Move to Protect Level (Protect Level): Page 6-3

Precautions for Correct Use

Protection cannot be cleared or changed without the password. Be careful not to forget it. If you forget the password, contact your OMRON sales representative.

6-3   Operation Level

Display this level to perform control operations on the E5□C. You can set alarm values, monitor the manipulated variable, and perform other operations in this level.
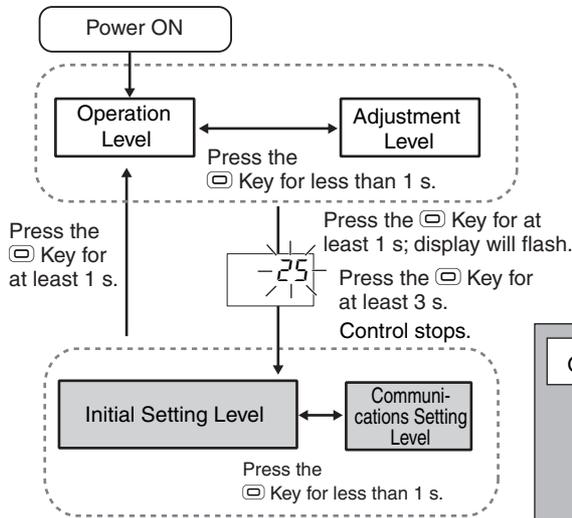

This level is displayed immediately after the power is turned ON.

Operation Level

		Page
25/0	Process Value/Set Point 1	6-8

Process Value/Set Point 1	PV/SP No. 1 Display Selection must not be set to 0.
Process Value/Set Point 2	PV/SP No. 2 Display Selection must not be set to 0.

Function

The following table shows the contents of the No. 1, 2, and 3 displays, according to the setting of the PV/SP Display Screen Selection parameter.

Setting

Set value	No. 1 display	No. 2 display	No. 3 display (E5EC, E5EC-B, and E5AC only)
0	Nothing is displayed.	Nothing is displayed.	Nothing is displayed.
1	Process value	Set point	Nothing is displayed.
2	Process value	Nothing is displayed.	Nothing is displayed.
3	Set point	SP (character display)	Nothing is displayed.
4	Process value	Set point	MV (valve opening for Position-proportional Models)
5	Process value	Set point	Multi-SP No.
6	Process value	Set point	Soak time remain `000`
7	Process value	Set point	Internal set point (ramp SP)
8	Process value	Set point	Alarm value 1[1]

*1   The set value of the Alarm Value 1 parameter is displayed even if it is not valid due to the setting of the Alarm 1 Type parameter.

	Monitor range	Unit
Process value	Temperature input: The specified range for the specified sensor. Analog input: Scaling lower limit −5% FS to Scaling upper limit +5% FS	EU

	Setting range	Unit
Set point	SP lower limit to SP upper limit	EU

For a temperature input, the decimal point position depends on the currently selected sensor, and for an analog input it depends on the Decimal Point parameter setting.

PV/SP Display Selections

Parameter	Default
PV/SP No. 1 Display Selection	4*
PV/SP No. 2 Display Selection	0

*   The default is 1 for models other than the E5□C-□-0□.

● **Related Parameters**

See

A-M **Auto/Manual Switch**

The Event Input Assignment 1 to Event Input Assignment 6 parameters must not be set to Auto/Manual and the Auto/Manual Select Addition parameter must be set to ON. The control must be set to 2-PID control.

Operation

• This parameter switches the Digital Controller between Automatic and Manual Modes.
• If the ⊟ Key is pressed for at least 3 seconds when the Auto/Manual Switch parameter is displayed, the Manual Mode will be entered and the manual control level will be displayed.
• This parameter will not be displayed if an event input is set to "MANU" (auto/manual).

See

● **Related Parameters**

PID ON/OFF (Initial Setting Level): Page 6-45
Auto/Manual Select Addition (Advanced Function Setting Level): Page 6-75

M-SP **Multi-SP Set Point Selection (Set Points 0 to 7)**

The Number of Multi-SP Points parameter must not be set to OFF and the Event Input Assignment 1 to Event Input Assignment 6 parameters must not be set to "Multi-SP No. switching bit 0" to "Multi-SP No. switching bit 2."

Function

To use the multi-SP function, preset the eight set points (SP 0 to 7) in the Adjustment Level, and then switch the set point either by operating the keys or by using external input signals (event inputs).
This parameter is used to select set points 0 to 7.

RSP **Remote SP Monitor** 000

**There must be a remote SP input.
The ST (self-tuning) parameter must be set to OFF (default: ON).
The Remote SP Enable parameter must be set to ON (default: OFF).**

Monitor

This parameter is used to monitor the remote SP.

Monitor range	Unit
Remote SP lower limit −10% to Remote SP upper limit +10%	EU

See

● **Related Parameters**

SP Mode (Adjustment Level): Page 6-21
ST (self-tuning) (Initial Setting Level): Page 6-46
Remote SP Enable (Advanced Function Setting Level): Page 6-85
Remote SP Upper Limit (Advanced Function Setting Level): Page 6-86
Remote SP Lower Limit (Advanced Function Setting Level): Page 6-86

5P-M   **Set Point During SP Ramp**   The SP Ramp Set Value parameter must not be set to OFF and the SP Ramp Fall Value parameter must not be set to SAME or OFF. The ST parameter must be set to OFF.

This parameter monitors the set point during SP ramp operation.

Function

A ramp is used to restrict the change width of the set point as a rate of change.

This parameter is displayed when a set value is input for the SP Ramp Set Value parameter (Adjustment Level).

When not in ramp operation, the set point will be the same as the one displayed for the Process Value/Set Point parameter.

Monitor

Monitor range	Unit
SP: SP lower limit to SP upper limit	EU

Set Point Lower Limit (Initial Setting Level): Page 6-45

[t 1   **Heater Current 1 Value Monitor**   HB and HS alarms must be supported.
The HB ON/OFF parameter must be set to ON.

This parameter measures the heater current from the CT input used for detecting heater burnout.

Function

This parameter measures and displays the heater current value.
• Heater burnout is not detected if the ON time for the control output for heating is 100 ms or less (30 ms or less if the control period is 0.1 or 0.2 s).

Monitor

Monitor range	Unit
0.0 to 55.0	A

• *FFFF* is displayed when 55.0 A is exceeded.
• If an alarm is output for the Heater Burnout Detection 1 parameter, the No. 1 display will flash the Heater Current 1 Value Monitor parameter.

● **Related Parameters**

See

Heater Burnout Detection 1 (Adjustment Level): Page 6-22
Heater Burnout Detection 2 (Adjustment Level): Page 6-23

Error Display *[t 1*: Page A-17

$Ct2$ **Heater Current 2 Value Monitor**

000

**HB and HS alarms must be supported (two CTs).
The HB ON/OFF parameter must be set to ON.**

This parameter measures the heater current from the CT input used for detecting heater burnout.

Function

This parameter measures and displays the heater current value.
• Heater burnout is not detected if the ON time for the control output for heating is 100 ms or less (30 ms or less if the control period is 0.1 or 0.2 s).

Monitor

Monitor range	Unit
0.0 to 55.0	A

• $FFFF$ is displayed when 55.0 A is exceeded.
• If an alarm is output for the Heater Burnout Detection 2 parameter, the No. 1 display will flash the Heater Current 2 Value Monitor parameter.

● **Related Parameters**

Error Display $Ct2$: Page A-17

$LCR1$ **Leakage Current 1 Monitor**

**HB and HS alarms must be supported.
The HS Alarm Use parameter must be set to ON.**

This parameter measures the heater current from the CT input used for detecting SSR short-circuits.

Function

The heater current is measured and the leakage current 1 monitor is displayed.
• The HS alarm is not detected if the OFF time for the control output for heating is 100 ms or less (35 ms or less if the control period is 0.1 or 0.2 s).

Monitor

Monitor range	Unit
0.0 to 55.0	A

• $FFFF$ is displayed when 55.0 A is exceeded.
• If an alarm is output for the HS Alarm 1 parameter, the No. 1 display will flash the Leakage Current 1 Monitor parameter.

6

LCR2   **Leakage Current 2 Monitor** `000`   **HB and HS alarms must be supported (two CTs).**
The HS Alarm Use parameter must be set to ON.

This parameter measures the heater current from the CT input used for detecting SSR short-circuits.

Function

This parameter measures and displays the heater current value.
• The HS alarm is not detected if the OFF time for the control output for heating is 100 ms or less (35 ms or less if the control period is 0.1 or 0.2 s).

Monitor

Monitor range	Unit
0.0 to 55.0	A

• *FFFF* is displayed when 55.0 A is exceeded.
• If an alarm is output for the HS Alarm 2 parameter, the No. 1 display will flash the Leakage Current 2 Monitor parameter.

Error Display *LCR2*: Page A-17

PRST   **Program Start** `000`   **The Program Pattern parameter must not be set to OFF.**

This parameter starts and stops the simple program function.

Function

• The RUN/STOP status will automatically switch to RUN when this parameter is set to STRT.
• The simple program will stop when this parameter is set to RSET.
• This parameter will function as a monitor display for the start/stop status of the simple program if an event input is selected to start the simple program.

Operation

Setting range		Default
RSET	Stops the simpler program.	*RSET*
STRT	Starts the simpler program.

Soak Time Unit (Advanced Function Setting Level): Page 6-84

R-S   **RUN/STOP**   **The Event Input Assignment 1 to 6 parameters must not be set to RUN/STOP.**

This parameter starts and stops the control operation.

Operation

When *RUN* (RUN) is selected, control is started. When *StoP* (STOP) is selected, control is stopped. The STOP indicator will light when control is stopped.

The default is *RUN*.

See

This parameter will not be displayed if an event input is set to "RUN/STOP."

6-3 Operation Level

6

$RL - 1$ **Alarm Value 1**

$RL - 2$ **Alarm Value 2**

$RL - 3$ **Alarm Value 3**

Alarm 1 to alarm 4 must be assigned.
The Alarm 1 to 4 Type parameters must not be set to 0, 1, 4, 5, or 12.

$RL - 4$ **Alarm Value 4**

This parameter is set to one of the input values "X" in *4-10-1 Alarm Types*.

Function

- These parameters set the alarm values for alarms 1 to 4.
- During temperature input, the decimal point position depends on the currently selected sensor, and during analog input it depends on the Decimal Point parameter setting.

Alarms Other Than an MV Alarm

Setting range	Unit	Default
−1999 to 9999	EU	0

MV Alarms

Setting range	Unit	Default
−199.9 to 999.9	%	0.0

6-3 Operation Level

6

ō   **MV Monitor (Heating)**   **The MV Display parameter must be set to ON.**

This parameter is used to monitor the manipulated variable for the heating control output during operation.

Function

- During standard control, the manipulated variable is monitored. During heating/cooling control, the manipulated variables on the control output (heating) is monitored.
- The default is OFF and the manipulated variable is not displayed.

Monitor

Control	Monitor range	Unit
Standard	−5.0 to 105.0	%
Heating/cooling	0.0 to 105.0	%

See

● **Related Parameters**

MV Display (Advanced Function Setting Level): Page 6-70

C-ō   **MV Monitor (Cooling)**   **The control system must be set to heating/cooling control.**
The MV Display parameter must be set to ON.

This parameter is used to monitor the manipulated variable for the cooling control output during operation.

Function

- During heating/cooling control, the manipulated variable on the control output (cooling) is monitored.
- The default is OFF and the manipulated variable is not displayed.

Monitor

Control	Monitor range	Unit
Heating/cooling	0.0 to 105.0	%

6-3 Operation Level

6

6-4   Adjustment Level

This level is for executing AT (auto-tuning) and other operations, and for set control parameters.
This level provides the basic Digital Controller parameters for PID control (proportional band, integral time, derivative time) and heating/cooling control.
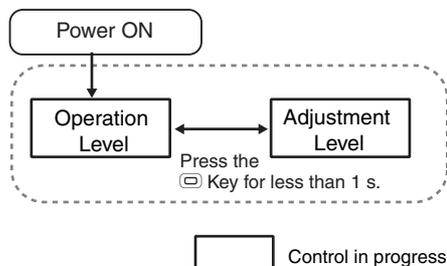

To move to the Adjustment Level from the Operation Level, press the ◻ Key once.

- The set points 0 to 7 in the Adjustment Level are the set values for switching the set point during multi-SP input.
- The following items are displayed for Digital Controllers with CT Inputs: Heater current monitors, Leakage current monitors, HB alarm detection, and HS alarm detection.
- Adjustment level parameters can be changed after setting the Operation/Adjustment Protect parameter to 0. Displays and changing levels are not possible if the Operation/Adjustment Protect parameter is set to 1 to 3. Protection is set in the Protect Level.

L.AdJ   Adjustment Level Display   `000`

This parameter is displayed after moving to the Adjustment Level. The four numeric digits to identify the product code are displayed in the No. 2 display.

When a logic operation is set, a period "." will be displayed on the No. 2. display.

Function

- This parameter indicates that the Adjustment Level has been entered.
  (The Adjustment Level parameter will not be displayed again even if the Ⓞ Key is pressed in the Adjustment Level to scroll through the parameters.)

At   AT Execute/Cancel

The RUN/STOP parameter must be set to RUN (default: RUN), control must be 2-PID control (default: ON/OFF), and the Event Input Assignment parameters must not be set to AT Execute/Cancel.

This parameter executes auto-tuning (AT).

Function

- The MV is forcibly increased and decreased around the set point to find the characteristics of the control object. From the results, the PID constants are automatically set in the Proportional Band (P), Integral Time (I), and Derivative Time (D) parameters.
- Both 100% AT and 40% AT are supported for AT.
  Only 100% autotuning is supported for heating and cooling control or for floating position-proportional control.
- For heating/cooling control, select the tuning methods that is suitable for the cooling control characteristics in the Heating/Cooling Tuning Method parameter.
- If autotuning is performed with the default settings, the cooling PID constants (i.e., Proportional Band (Cooling), Integral Time (Cooling), and Derivative Time (Cooling) parameters) have the same values as the heating PID constants.
- This parameter will not be displayed when either 100% or 40% AT execute/cancel is set to be executed using an event input.

Operation

Setting range		Default
OFF:	AT Cancel	
AT-2:	100%AT Execute	OFF
AT-1:	40%AT Execute	

- This parameter is normally oFF. Press the Ⓐ Key and select $At\text{-}2$ or $At\text{-}1$ to execute AT. AT cannot be executed when control is stopped or during ON/OFF control.
- The TUNE indicator will light during autotuning.
- When AT execution ends, the parameter setting automatically returns to oFF.

		Communications must be supported.
CMWE	**Communications Writing**	The Event Input Assignment 1 to Event Input Assignment 6 parameters must not be set to enable/disable communications writing.

Function

- This parameter enables/disables writing of parameters to the E5□C from the host (personal computer) using communications.
- This parameter is not displayed if the Event Input Assignment 1 to Event Input Assignment 6 parameters are set to enable/disable communications writing.

Setting

Setting range	Default
ON: Writing enabled OFF: Writing disabled	OFF

- The Communications Writing parameter will be automatically turned ON if the Protocol Setting parameter is set to component communications, Host Link (FINS) communications, or the MC Protocol (format 4).

See

---

		There must be a remote SP input.
SPMd	**SP Mode** `000`	The ST (self-tuning) parameter must be set to OFF (default: ON). The Remote SP Enable parameter must be set to ON (default: OFF). The Event Input Assignment parameters must not be set to SP Mode Switch.

Function

This parameter sets the SP mode. In Local SP Mode, the local SP that is set inside the Digital Controller is used as the SP. In Remote SP Mode, the remote SP that is specified with an external signal (e.g., 4 to 20 mA) is used as the SP.

Setting range	Default
LSP: Local SP and RSP: Remote SP	LSP

6-4 Adjustment Level

6

Ct 1   **Heater Current 1 Value Monitor**   **HB and HS alarms must be supported.**
The HB ON/OFF parameter must be set to ON.

This parameter measures the heater current from the CT input used for detecting heater burnout.

Function

This parameter measures and displays the heater current when the heater is ON.
• Heater burnout is not detected if the ON time for the control output for heating is 100 ms or less (30 ms or less if the control period is 0.1 or 0.2 s).

Monitor

Monitor range	Unit
0.0 to 55.0	A

• *FFFF* is displayed when 55.0 A is exceeded.
• If an alarm is output for the Heater Burnout Detection 1 parameter, the No. 1 display will flash the Heater Current 1 Value Monitor parameter.

$5P - 0$	**SP 0**	
$5P - 1$	**SP 1**	
$5P - 2$	**SP 2**	
$5P - 3$	**SP 3**	**The Number of Multi-SP Points parameter must be set to 2 to 8 and the Event Input 1 Assignment to Event Input 6 Assignment parameters must not be set to "Multi-SP No. switching bit 0" to "Multi-SP No. switching bit 2."**
$5P - 4$	**SP 4**	
$5P - 5$	**SP 5**	
$5P - 6$	**SP 6**	
$5P - 7$	**SP 7**	

These parameters set the set points when the multi-SP function is used.

Function

The values set in these parameters can be selected by operating the keys on the front panel or by using event inputs.
- When the set point has been changed, the set value of the set point (0 to 7) selected by the multi-SP inputs is also changed to the same value.
- The decimal point position depends on the selected sensor. During analog input, it depends on the Decimal Point parameter setting.

Setting

Setting range	Unit	Default
SP lower limit to SP upper limit	EU	0

Event Input Assignment (Initial Setting Level): Page 6-57
Number of Multi-SP Points (Advanced Function Setting Level): Page 6-63

ĪNS   **Process Value Input Shift**

Function

Sometimes an error occurs between the process value and the actual temperature. To off-set this, a compensated value can be obtained by adding an input shift value to the input. The compensated value is displayed as the process value and used for control. The entire input range is shifted by a fixed rate. If the input shift value is set to −1°C, control will be performed for a value 1°C lower than the measured temperature.

Setting

Setting range	Unit	Default
Temperature input: −199.9 to 999.9	°C or °F	0.0
Analog input: −1,999 to 9,999*	EU	0

*   The decimal point position depends on the Decimal Point parameter setting.

● **Related Parameters**

See

Input Type (Initial Setting Level): Page 6-43

ĪNRŁ   **Process Value Slope Coefficient** `000`

Function

This parameter sets a factor to apply to the input to compensate the process value. The resulting value is displayed as the process value and used in control.

Setting

Setting range	Default
0.001 to 9.999	1.000

RSS   **Remote SP Input Shift** `000`

There must be a remote SP input.
The ST (self-tuning) parameter must be set to OFF (default: ON).
The Remote SP Enable parameter must be set to ON (default: OFF).

Function

This parameter sets a compensation value to add to the remote SP input to compensate it. The compensated value is displayed as the process value and used in control.

Setting

Setting range	Unit	Default
Temperature input: −199.9 to 999.9	°C or °F	0.0
Analog input: −1,999 to 9,999	EU	0

*   The decimal point position depends on the Decimal Point parameter setting.

● **Related Parameters**

See

Input Type (Initial Setting Level): Page 6-43
ST (self-tuning) (Initial Setting Level): Page 6-46
Remote SP Enable (Advanced Function Setting Level): Page 6-85

RSRT   **Remote SP Input Slope Coefficient**

000

There must be a remote SP input.
The ST (self-tuning) parameter must be set to OFF (default: ON).
The Remote SP Enable parameter must be set to ON (default: OFF).

Function

This parameter sets a factor to apply to the remote SP input to compensate it. The resulting value is displayed as the remote SP input value and used in control.

Setting

Setting range	Default
0.001 to 9.999	1.000

See

ST (self-tuning) (Initial Setting Level): Page 6-46
Remote SP Enable (Advanced Function Setting Level): Page 6-85

P   **Proportional Band**

I   **Integral Time**   **The control must be set to 2-PID control.**

d   **Derivative Time**

These parameters set PID control constants. PID constants are automatically set when AT or ST is executed.

Setting

P action: Refers to control in which the MV is proportional to the deviation (control error).

I action: Refers to a control action that is proportional to the time integral of the deviation. With proportional control, there is normally an offset (control error). Proportional action is thus used in combination with integral action. As time passes, this control error disappears, and the control temperature (process value) comes to agree with the set point.

D action: Refers to a control action that is proportional to the time derivative of the control error. The proportional control and integral control correct for errors in the control result, and thus the control system is late in responding to sudden changes in temperature. The derivative action increases the MV in proportion to the slope of the change in the temperature as a corrective action.

Parameter	Setting range			Unit	Default
Proportional Band	Temperature input		0.1 to 999.9	°C or °F	8.0
	Analog input			%FS	10.0
Integral Time *	Integral/ Derivative Time Unit of 1 s	Standard, heating/cooling, or close position-proportional control	0 to 9999	Seconds	233
		Floating position-proportional control	1 to 9999		
	Integral/ Derivative Time Unit of 0.1 s	Standard, heating/cooling, or close position-proportional control	0.0 to 999.9	Seconds	233.0
		Floating position-proportional control	0.1 to 999.9		
Derivative Time *	Integral/Derivative Time Unit of 1 s		0 to 9999	Seconds	40
	Integral/Derivative Time Unit of 0.1 s		0.0 to 999.9	Seconds	40.0

* The unit is determined by the setting of the Integral/Derivative Time Unit parameter. The Proportional Band, Integral Time, and Derivative Time parameters are initialized if the Integral/Derivative Time Unit parameter is changed.

● **Related Parameters**

AT Execute/Cancel (Adjustment Level): Page 6-20

Integral/Derivative Time Unit (Advanced Function Setting Level): Page 6-67

$\mathcal{L}$-P **Proportional Band (Cooling)**

$\mathcal{L}$-$\bar{\mathcal{L}}$ **Integral Time (Cooling)**   **The control must be set to heating/cooling control and 2-PID control.**

$\mathcal{L}$-d **Derivative Time (Cooling)**

These parameters set the PID constants for cooling control. These parameters are automatically set according to the Heating/Cooling Tuning Method parameter when AT or ST is executed.

Parameter	Setting range		Unit	Default
Proportional Band (Cooling)	Temperature input	0.1 to 999.9	°C or °F	8.0
	Analog input		%FS	10.0
Integral Time (Cooling) *	Integral/Derivative Time Unit of 1 s	0 to 9999	Seconds	233
	Integral/Derivative Time Unit of 0.1 s	0.0 to 999.9	Seconds	233.0
Derivative Time (Cooling)*	Integral/Derivative Time Unit of 1 s	0 to 9999	Seconds	40
	Integral/Derivative Time Unit of 0.1 s	0.0 to 999.9	Seconds	40.0

* The unit is determined by the setting of the Integral/Derivative Time Unit parameter. The Proportional Band (Cooling), Integral Time (Cooling), and Derivative Time (Cooling) parameters are initialized if the Integral/Derivative Time Unit parameter is changed.

Integral/Derivative Time Unit (Advanced Function Setting Level): Page 6-67

6-4 Adjustment Level

6

C-db   **Dead Band**   **The control system must be set to heating/cooling control.**

This parameter sets the output dead band width for heating/cooling control. A negative setting sets an overlapping band.

Function

• This parameter sets an area in which the control output is 0 centering around the set point for a heating/cooling control.

Setting

Setting range		Unit	Default
Temperature input	−199.9 to 999.9	°C or °F	0.0
Analog input	−19.99 to 99.99	%FS	0.00

---

oF-R   **Manual Reset Value**   **The control must be standard control or 2-PID control and the Integral Time parameter must be set to 0. The Integral Time parameter must also be set to 0 for a Position-proportional Model.**

Function

• This parameter sets the required manipulated variable to remove offset during stabilization of P or PD control.

Setting

Setting range	Unit	Default
0.0 to 100.0	%	50.0

HYS	**Hysteresis (Heating)**	**The control must be ON/OFF control.**
CHYS	**Hysteresis (Cooling)**	**For the Hysteresis (Cooling) parameter, the control must be heating/cooling control.**

This parameter sets the hysteresis for ensuring stable operation at the ON/OFF switching point.

Function

- For standard control, use the Hysteresis (Heating) parameter. The Hysteresis (Cooling) parameter cannot be used.
- For heating/cooling control, the hysteresis can be set independently for heating/cooling. The Hysteresis (Heating) parameter is used for the heating side, and the Hysteresis (Cooling) parameter is used for the cooling side.

Setting

Parameter name	Setting range		Unit	Default
Hysteresis (Heating)	Temperature input	0.1 to 999.9	°C or °F	1.0
	Analog input	0.01 to 99.99	%FS	0.10
Hysteresis (Cooling)	Temperature input	0.1 to 999.9	°C or °F	1.0
	Analog input	0.01 to 99.99	%FS	0.10

$MV-5$ **MV at Stop** `000`   **The control must be set to 2-PID control or a Position-proportional Model must be used. The MV at Stop and Error Addition parameter must be ON.**

Function

- This parameter sets the MV to use when the RUN/STOP status changes from RUN to STOP.

Setting

Control method	Setting range	Unit	Default
Standard control Close position-proportional control with the Direct Setting of Position-proportional MV parameter set to ON	−5.0 to 105.0	%	0.0
Heating/cooling control	−105.0 to 105.0		
Floating position-proportional control or the Direct Setting of Position-proportional MV parameter set to OFF	CLOS, HOLD, or OPEN	None	HOLD

$SPRt$ **SP Ramp Set Value**

The ST (self-tuning) parameter must be set to OFF (default: ON).

$SPRL$ **SP Ramp Fall Value** `000`

Function

• These parameters set the rate of change during SP ramp operation. They set the maximum permissible change width per unit of time as the SP ramp set value and the SP ramp fall value. The SP ramp function is disabled if this parameter is set to OFF.

• For a temperature input, the decimal point positions of the SP ramp set value and SP ramp fall value depend on the currently selected sensor, and for an analog input they depend on the Decimal Point parameter.

Setting

Parameter	Setting range	Unit	Default
SP Ramp Set Value	OFF or 1 to 9,999	EU/s, EU/ min, EU/h	OFF
SP Ramp Fall Value	SAME (Same as SP ramp set value), OFF or 1 to 9,999	EU/s, EU/ min, EU/h	SAME

● **Related Parameters**

See

ST (self-tuning) (Initial Setting Level): Page 6-46

$\bar{o}L$ -H	MV Upper Limit	The control must be set to 2-PID control.
		The ST parameter must be set to OFF.
$\bar{o}L$ -L	MV Lower Limit	A Position-proportional Model must be set to close control.

Function

- The MV Upper Limit and MV Lower Limit parameters set the upper and lower limits of the manipulated variable. When the calculated manipulated variable exceeds the upper or lower limit value, the upper or lower limit value will be the output level.

Setting

- MV Upper Limit

Control method	Setting range	Unit	Default
Standard control	MV lower limit + 0.1 to 105.0	%	100.0
Close position-proportional control			
Heating/cooling control	0.0 to 105.0		

- MV Lower Limit
  The MV for the cooling control output during heating/cooling control is expressed as a negative value.

Control method	Setting range	Unit	Default
Standard control	−5.0 to MV upper limit − 0.1	%	0.0
Close position-proportional control			
Heating/cooling control	−105.0 to 0.0		−100.0

Close/Floating (Initial Setting Level): Page 6-59

$\bar{o}RL$ **MV Change Rate Limit** `000`   **2-PID control must be used.**
The ST parameter must be set to OFF.

Function

- The MV Change Rate Limit parameter sets the maximum allowable variation in the MV per second. If the change in the MV exceeds this setting, the MV will be changed by the MV change rate limit until the calculated value is reached. If the limit is set to 0.0, this function will be disabled.
- The MV Change Rate Limit parameter will not operate in the following situations.
    - In Manual Mode
    - During ST execution (Cannot be set when ST is ON.)
    - During AT execution
    - During ON/OFF control
    - While stopped (MV output during STOP)
    - During MV output when error occurs

Setting

Setting range	Unit	Default
0.0 to 100.0	%/s	0.0

● **Related Parameters**

See   Proportional Band (Adjustment Level): Page 6-28

---

db **Position Proportional Dead Band**   **A Position-proportional Model must be used.**

Function

- When the difference between the MV and the valve opening is within the value that is set for the Position Proportional Dead Band, opening or closing the valve will be stopped to prevent the valve from deteriorating.

Setting

Setting range	Unit	Default
Close control: 0.1 to 10.0	%	4.0
Floating control: 0.1 to 10.0	%	2.0

● **Related Parameters**

See   Open/Close Hysteresis (Adjustment Level): Page 6-36

$\overline{o}\mathcal{L}$-H **Open/Close Hysteresis**   **A Position-proportional Model must be used.**

Function

- The Open/Close Hysteresis parameter is used to shift the ON and OFF points for the open output and close output to prevent output chattering.

Setting

Setting range	Unit	Default
0.1 to 20.0	%	0.8

● **Related Parameters**

See

Position Proportional Dead Band (Adjustment Level): Page 6-35

$SQRP$ **Extraction of Square Root Low-cut Point** 000   **The input type must be an analog input, and the Extraction of Square Root Enable parameter must be set to ON.**

Function

- This parameter sets the extraction of square root low-cut point used for the inputs. The data after extracting the square root is shown below.
- The low-cut point is used for extracting the square root for flowrate sensors.
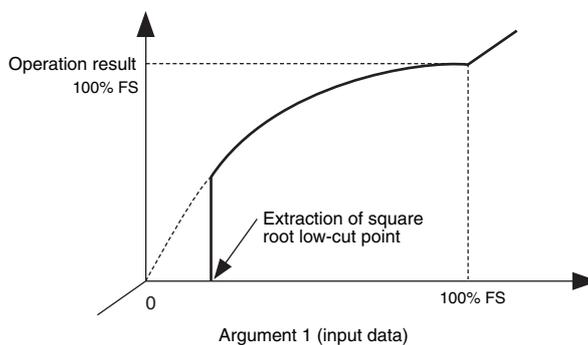

Setting

Setting range	Unit	Default
0.0 to 100.0	%	0.0

● **Related Parameters**

Extraction of Square Root Enable (Initial Setting Level): Page 6-60

$W\,I$ to $B\bar{o}N$ Work Bit 1 to 8 ON Delay `000`
$W\,I$ to $B\bar{o}F$ Work Bit 1 to 8 OFF Delay `000`

The work bit operation type must not be set to OFF.

Function

• ON Delay
  When the results of a work bit logic operation is ON, the work bit is turned ON after the time specified in the parameter elapses.
• OFF Delay
  When the results of a work bit logic operation is OFF, the work bit is turned OFF after the time specified in the parameter elapses.

Setting

Setting range	Unit	Default
0 to 999	Seconds	0

6-5   Monitor/Setting Item Level `000`

Monitor/setting items can be displayed by means of the function key when the PF Setting parameter (Advanced Function Setting Level) is set to PFDP: Monitor/Setting Item.
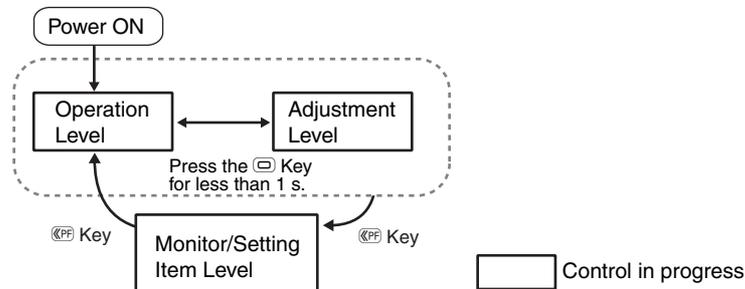

PFd 1 to 5   Monitor/Setting Item Display 1 to 5

The PF Setting parameter must be set to PFDP, and the Monitor/Setting Item 1 to 5 parameters must not be set to OFF.

- When the PF Key is set to display monitor/setting items, pressing the PF Key will display in order the contents of the Monitor/Setting Item 1 to 5 parameters. The contents of these parameters are shown in the following table. For the setting (monitor) ranges, refer to the applicable parameters.

Set value	Setting	Remarks	
		Monitor/Setting	Display
0	Disabled	---	---
1	PV/SP/Multi-SP	Can be set. (SP)[*1]	---
2	PV/SP/MV (valve opening for Position-proportional Models)	Can be set. (SP)[*1]	---
3	PV/SP /Soak time remain	Can be set. (SP)[*1]	---
4	Proportional band (P)	Can be set.	P
5	Integral time (I)	Can be set.	L
6	Derivative time (D)	Can be set.	d
7	Alarm value 1	Can be set.	AL - 1
8	Alarm value upper limit 1	Can be set.	AL 1H
9	Alarm value lower limit 1	Can be set.	AL 1L
10	Alarm value 2	Can be set.	AL -2
11	Alarm value upper limit 2	Can be set.	AL 2H
12	Alarm value lower limit 2	Can be set.	AL 2L
13	Alarm value 3	Can be set.	AL -3
14	Alarm value upper limit 3	Can be set.	AL 3H
15	Alarm value lower limit 3	Can be set.	AL 3L
16	Alarm value 4	Can be set.	AL -4
17	Alarm value upper limit 4	Can be set.	AL 4H
18	Alarm value lower limit 4	Can be set.	AL 4L
19	PV/SP/Internal SP	Can be set. (SP)[*1]	---
20	PV/SP/Alarm Value 1[*2]	Can be set. (SP)[*1]	---
21	Proportional Band (Cooling)	Can be set.	C -P
22	Integral Time (Cooling)	Can be set.	C -L
23	Derivative Time (Cooling)	Can be set.	C -d

*1   With the E5CC, E5CC-U, E5CC-B, E5DC, E5DC-B, or E5GC, only the PV and SP can be displayed.

*2   The Alarm Value 1 parameter is displayed even if the Alarm 1 Type parameter is set for no alarm. However, any value that is set is not valid.

6-6   Manual Control Level

If you change to Manual Mode, the Manual MV parameter will be displayed and the displayed value will be output as the MV.
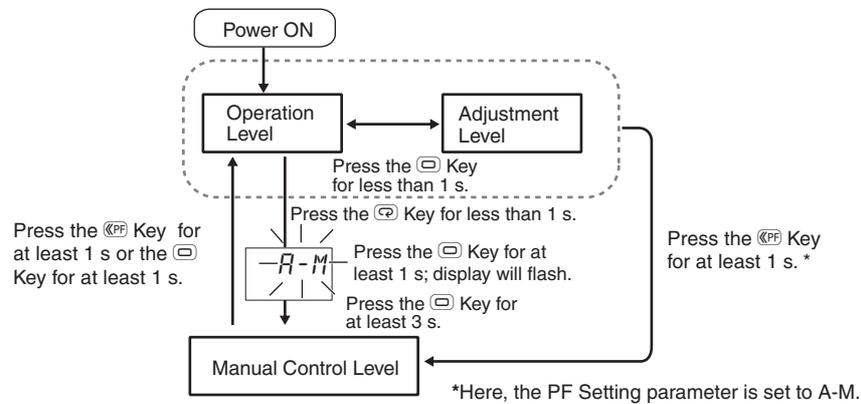

To move from the operation level to the manual control level, hold the ▢ Key down for at least three seconds with the Auto/Manual Switch parameter displayed.

To move from any of the levels within the dotted line, press the ⟪PF⟫ Key for at least one seconds. (However, the PF Setting parameter must be set to A-M.)

For details on the setting method, refer to *5-12 Performing Manual Control*.

- The MANU indicator will light during manual control.
- It is not possible to move to any parameters except for the PV/MV parameter during manual operation.

PV/MV (Manual MV)

Function

• The manual control level display appears as shown below.

5-12 Performing Manual Control: Page 5-32

Standard or Heating/Cooling (Initial Setting Level): Page 6-46

6-7   Initial Setting Level

This level is used to set up the basic Digital Controller specifications. In this level, you can set the Input Type parameter to set the sensor input to be connected, limit the setting range of set points, set the alarm modes, and perform other operations.
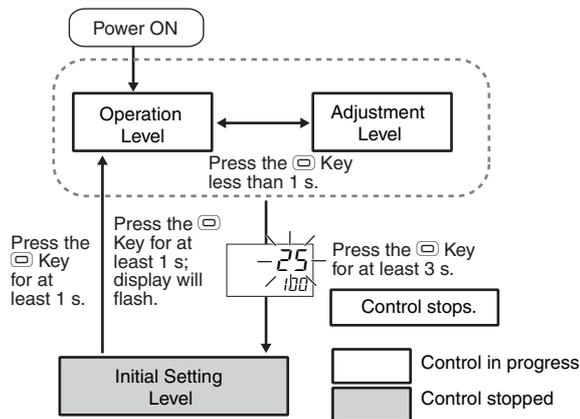

To move from the Operation Level or Adjustment Level to the Initial Setting Level, press the ⊖ Key for at least three seconds with any parameter displayed except for the Auto/Manual Switch parameter.

- The Initial Setting Level is not displayed when the Initial Setting/Communications Protect parameter is set to 2. It can be used when the Initial Setting/Communications Protect parameter is set to 0 or 1.
- If the Input Type parameter is set for an analog input, the following parameters will be set: Scaling upper limit, Scaling lower limit, and Decimal point.

Initial Setting Level

$\bar{\mathsf{L}}\mathsf{N}\text{-}\mathsf{H}$ **Scaling Upper Limit**

$\bar{\mathsf{L}}\mathsf{N}\text{-}\mathsf{L}$ **Scaling Lower limit**   **The input type must be set for an analog input.**

dP **Decimal Point**

Function

• The Decimal Point parameter specifies the decimal point position of parameters (set point, etc.) whose unit is EU.

Setting

• Scaling Upper Limit, Scaling Lower Limit

Parameter name	Setting range	Default
Scaling Upper Limit	Scaling lower limit + 1 to 9999	100
Scaling Lower Limit	−1999 to scaling upper limit − 1	0

• Decimal Point

Parameter name	Setting range	Default
Decimal Point	0 to 3	0

Set value	Settings	Example
0	0 digits past decimal point	1234
1	1 digits past decimal point	123.4
2	2 digits past decimal point	12.34
3	3 digits past decimal point	1.234

Input Type (Initial Setting Level): Page 6-43

$\mathsf{d}\text{-}\mathsf{U}$ **Temperature Unit**   **The input type must be set for a temperature input.**

Function

• Set the temperature input unit to either °C or °F.

Setting

Setting range	Default
$\bar{\mathsf{L}}$: °C, $\bar{\mathsf{F}}$: °F	$\bar{\mathsf{L}}$

* The temperature unit is not displayed by the E5DC and E5DC-B.

See

● **Related Parameters**

Input Type (Initial Setting Level): Page 6-43

$5L-H$ **SP Upper Limit**

$5L-L$ **SP Lower Limit**

Function

- These parameters set the upper and lower limits of the set points. A set point can be set within the range defined by the upper and lower limit set values in the SP Upper Limit and SP Lower Limit parameters. If these parameters are reset, any set point that is outside of the new range will be forcibly changed to either the upper limit or the lower limit.
- When the temperature input type and temperature unit have been changed, the set point upper limit and set point lower limit are forcibly changed to the upper and lower limits of the sensor.
- For a temperature input, the decimal point position depends on the currently selected sensor, and for an analog input it depends on the Decimal Point parameter setting.

Setting

Parameter name		Setting range	Unit	Default
Set Point Upper Limit	Temperature input	SP lower limit + 1 to Input setting range upper limit	EU	1300
	Analog input	SP lower limit + 1 to scaling upper limit	EU	100
Set Point Lower Limit	Temperature input	Input setting range lower limit to SP upper limit - 1	EU	−200
	Analog input	Scaling lower limit to SP upper limit - 1	EU	0

$[NEL$ **PID ON/OFF**   **A Standard Model must be used.**

Function

- This parameter selects 2-PID control or ON/OFF control.
- The auto-tuning and self-tuning functions can be used in 2-PID control.

Setting

Setting range	Default
$P\bar{\imath}d$: 2-PID, $\bar{o}N\bar{o}F$: ON/OFF	$\bar{o}N\bar{o}F$

6

5-HE   **Standard or Heating/Cooling**   **A Standard Model must be used.**

Function

- This parameter selects standard control or heating/cooling control.
- If heating/cooling control is selected for the E5CC, E5CC-B, E5CC-U, E5DC, or E5DC-B when there is only one control output, the auxiliary output 2 terminal is assigned as the control output for cooling. (If the Digital Controller has only one auxiliary output, an output is not automatically allocated for the control output for cooling.)
- If heating/cooling control is selected for the E5EC, E5EC-B, or E5AC when there is only one control output, the auxiliary output 4 terminal is assigned as the control output for cooling. (If the Digital Controller has only two auxiliary outputs, auxiliary output 2 is allocated as the control output for cooling.)
- When heating/cooling control is selected for the E5GC, auxiliary output 1 is assigned as the control output for cooling.

Note: If standard control is selected, set the Control Output 1 Assignment to $\bar{o}$ (control output (heating)) for either direct (cooling) or reverse (heating) operation.

Setting

Setting range	Default
5ENd: Standard, *H-E*: Heating/cooling	*5ENd*

5E   **ST (self-tuning)**   **The control must be set to a temperature input, standard control, and 2-PID control.**

Function

- The ST (self-tuning) function executes tuning from the start of program execution to calculate PID constants matched to the control target. When the ST function is in operation, be sure to turn ON the power supply of the load connected to the control output simultaneously with or before starting E5□C operation.
- Auto-tuning can be started during self-tuning.

Setting

Setting range	Default
ōFF: ST function OFF, *ōN*: ST function ON	*ōN*

P⊦RN   **Program Pattern** `000`

This parameter sets the type of control when using the simple program function.

Function

- If the program pattern is set to ōFF, the simple program will not operate.
- If the program pattern is set to 5⊦ōP, the RUN/STOP status will change to STOP after the soak time has expired. If the program pattern is set to ⌐ōN⊦, control will continue in RUN status after the soak time has expired.

Setting

Setting range		Default
ōFF	Simple program function turned OFF	ōFF
5⊦ōP	Go to STOP mode at end of program.	
⌐ōN⊦	Continue in RUN mode at end of program.	

See

⌐P   **Control Period (Heating)**
⌐-⌐P   **Control Period (Cooling)**

The cooling control output and heating control output must be assigned to relay or voltage outputs (for driving SSR).
The control must be set to 2-PID control.
For the Control Period (Cooling) parameter, the control must be set to heating/cooling control.

Function

- These parameters set the output periods. Set the control periods taking the control characteristics and the electrical life of the relay into consideration.
- For standard control, use the Control Period (Heating) parameter. The Control Period (Cooling) parameter cannot be used.
- When the heating control output is a current output, the Control Period (Heating) parameter cannot be used.
- For heating/cooling control, the control period can be set independently for heating and cooling. The Control Period (Heating) parameter is used for the heating control output, and the Control Period (Cooling) parameter is used for the cooling control output.

Setting

Parameter name	Setting range	Unit	Default
Control Period (Heating)	0.1, 0.2, 0.5, 1 to 99	Seconds	20 for relay output
			2 for voltage output (for driving SSR)
Control Period (Cooling)	0.1, 0.2, 0.5, 1 to 99	Seconds	20 for relay output
			2 for voltage output (for driving SSR)

PID ON/OFF (Initial Setting Level): Page 6-45

ōREV   Direct/Reverse Operation

Function

• "Direct operation" refers to control where the manipulated variable is increased when the process value increases. Alternatively, "reverse operation" refers to control where the manipulated variable is increased when the process value decreases.

Setting

Setting range	Default
ōR-R: Reverse operation, ōR-d: Direct operation	ōR-R

ALt1   Alarm 1 Type   Alarm 1 must be assigned.

ALt2   Alarm 2 Type   Alarm 2 must be assigned.

ALt3   Alarm 3 Type   Alarm 3 must be assigned.

ALt4   Alarm 4 Type   Alarm 4 must be assigned.

Function

• Set the alarm type independently for each alarm in the Alarm 1 to 4 Type parameters in the Initial Setting Level.
• The alarms that can be set are listed in the following table.
• You can use an LBA (12) only for alarm 1. You cannot use an LBA on a Position-proportional Model.
• If the Controller is equipped with HB/HS alarm detection, the Alarm Type 1 is not displayed for the default settings. To use alarm 1, set an output assignment to alarm 1. (Refer to *4-6-3 Assigned Output Functions (Assigning Control Outputs Is Not Supported for Position-proportional Models.)*.)

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
0	Alarm function OFF	Output OFF		No alarm
1	Upper- and lower-limit[1]	ON OFF ⟶ L H ⟵ SP PV	[2]	Set the upward deviation in the set point for the alarm upper limit (H) and the lower deviation in the set point for the alarm lower limit (L). The alarm is ON when the PV is outside this deviation range.
2 (default)	Upper-limit	ON OFF ⟶ X ⟵ SP PV	ON OFF ⟶ X ⟵ SP PV	Set the upward deviation in the set point by setting the alarm value (X). The alarm is ON when the PV is higher than the SP by the deviation or more.

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
3	Lower-limit	ON OFF — X — SP PV	ON OFF — X — SP PV	Set the downward deviation in the set point by setting the alarm value (X). The alarm is ON when the PV is lower than the SP by the deviation or more.
4	Upper- and lower-limit range[*1]	ON OFF — L H — SP PV	*3	Set the upward deviation in the set point for the alarm upper limit (H) and the lower deviation in the set point for the alarm lower limit (L). The alarm is ON when the PV is inside this deviation range.
5	Upper- and lower-limit with standby sequence[*1]	ON OFF — L H — SP PV *5	*4	A standby sequence is added to the upper- and lower-limit alarm (1). [*6]
6	Upper-limit with standby sequence	ON OFF — X — SP PV	ON OFF — X — SP PV	A standby sequence is added to the upper-limit alarm (2). [*6]
7	Lower-limit with standby sequence	ON OFF — X — SP PV	ON OFF — X — SP PV	A standby sequence is added to the lower-limit alarm (3). [*6]
8	Absolute-value upper-limit	ON OFF — X — 0 PV	ON OFF — X — 0 PV	The alarm will turn ON if the process value is larger than the alarm value (X) regardless of the set point.
9	Absolute-value lower-limit	ON OFF — X — 0 PV	ON OFF — X — 0 PV	The alarm will turn ON if the process value is smaller than the alarm value (X) regardless of the set point.
10	Absolute-value upper-limit with standby sequence	ON OFF — X — 0 PV	ON OFF — X — 0 PV	A standby sequence is added to the absolute-value upper-limit alarm (8). [*6]
11	Absolute-value lower-limit with standby sequence	ON OFF — X — 0 PV	ON OFF — X — 0 PV	A standby sequence is added to the absolute-value lower-limit alarm (9). [*6]
12	LBA (alarm 1 type only)			*7
13	PV change rate alarm			*8
14	SP absolute-value upper-limit alarm	ON OFF — X — 0 SP	ON OFF — X — 0 SP	This alarm type turns ON the alarm when the set point (SP) is higher than the alarm value (X).
15	SP absolute-value lower-limit alarm	ON OFF — X — 0 SP	ON OFF — X — 0 PV	This alarm type turns ON the alarm when the set point (SP) is smaller than the alarm value (X).

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
16	MV absolute-value upper-limit alarm[*9]	Standard Control ON OFF ⊢ X ⊣ ▮ MV 0	Standard Control ON OFF ⊢ X ⊣ ▮ MV 0	This alarm type turns ON the alarm when the manipulated variable (MV) is higher than the alarm value (X).
		Heating/Cooling Control (Heating MV) ON OFF ⊢ X ⊣ ▮ MV 0	Heating/Cooling Control (Heating MV) Always ON	
17	MV absolute-value lower-limit alarm[*9]	Standard Control ON OFF ⊢ X ⊣ ▮ MV 0	Standard Control ON OFF ▮ ⊢ X ⊣ MV 0	This alarm type turns ON the alarm when the manipulated variable (MV) is lower than the alarm value (X).
		Heating/Cooling Control (Cooling MV) ON OFF ⊢ X ⊣ ▮ MV 0	Heating/Cooling Control (Cooling MV) Always ON	
18	RSP absolute-value upper-limit alarm[*10] 000	ON OFF ⊢ X ⊣ ▮ RSP 0	ON OFF ⊢ X ⊣ ▮ RSP 0	This alarm type turns ON the alarm when the remote SP (RSP) is higher than the alarm value (X).
19	RSP absolute-value lower-limit alarm[*10] 000	ON OFF ▮ ⊢ X ⊣ RSP 0	ON OFF ▮ ⊢ X ⊣ RSP 0	This alarm type turns ON the alarm when the remote SP (RSP) is lower than the alarm value (X).

*1 With set values 1, 4 and 5, the upper- and lower- limit values can be set independently for each alarm type, and are expressed as "L" and "H."

*2 Set value: 1 (Upper- and lower-limit alarm)

Case 1

L   H SP

H < 0, L > 0
|H| < |L|

Case 2

SP L   H

H > 0, L < 0
|H| > |L|

Case 3 (Always ON)

H   SP   L   H < 0, L < 0

H   L SP   H < 0, L > 0
                  |H| ≥ |L|

SP   H   L   H > 0, L < 0
                  |H| ≤ |L|

*3 Set value: 4 (Upper- and lower-limit range)

Case 1

L   H SP

H < 0, L > 0
|H| < |L|

Case 2

SP L   H

H > 0, L < 0
|H| > |L|

Case 3 (Always OFF)

H   SP   L   H < 0, L < 0

H   L SP   H < 0, L > 0
                  |H| ≥ |L|

SP   H   L   H > 0, L < 0
                  |H| ≤ |L|

*4 Set value: 5 (Upper- and lower-limit alarm with standby sequence)

- For the upper- and lower-limit alarms in cases 1 and 2 above, the alarm is always OFF if upper- and lower-limit hysteresis overlaps.
- In case 3, the alarm is always OFF.

*5   Set value: 5 (Upper- and lower-limit alarm with standby sequence)
- The alarm is always OFF if upper- and lower-limit hysteresis overlaps.

*6   Refer to *Standby Sequence Reset* on page 6-64 for information on the operation of the standby sequence.

*7   Refer to *5-11-1 Loop Burnout Alarm (LBA)*.

*8   Refer to *PV Change Rate Alarm* on page 4-36.

*9   When heating/cooling control is performed, the MV absolute-value upper-limit alarm functions only for the heating operation and the MV absolute-value lower-limit alarm functions only for the cooling operation.

*10   This value is displayed only when a remote SP input is used. It functions in both Local SP Mode and Remote SP Mode.

$\bar{o}$ 15$\bar{t}$ **Control Output 1 Signal** **Control output 1 must be a linear current output.**

$\bar{o}$25$\bar{t}$ **Control Output 2 Signal** `000` **Control output 2 must be a linear current output.**

Function

These parameters set the output signal for linear current outputs.
• Select 4 to 20 mA or 0 to 20 mA for the signal.

Setting

Setting range	Default
4-20: 4 to 20mA 0-20: 0 to 20mA	4-20

$\bar{t}$R5$\bar{t}$ **Transfer Output Signal** `000` **There must be a transfer output.**

Function

This parameter sets the output signal for the transfer output.
• Select 4 to 20 mA or 1 to 5 V.

Setting

Setting range	Default
4-20: 4 to 20mA 1-$5V$: 1 to 5 V	4-20

$ER-E$ **Transfer Output Type** `000`   **There must be a transfer output.**

Function

- This parameter sets the transfer output type.

Setting

Transfer output type		Default
OFF	$\bar{o}FF$	$\bar{o}FF$
Set point [1]	$5P$	
Set point during SP ramp	$5P-M$	
PV	PV	
MV (heating) [2]	MV	
MV (cooling) [3]	$C-MV$	
Valve opening [4]	$V-M$	

[1]   The remote SP will be output while the SP Mode parameter is set to the Remote SP Mode.
[2]   This function can be set for a Position-proportional Model, but the setting will be disabled.
[3]   This function can be set for standard control or for a Position-proportional Model, but the setting will be disabled.
[4]   This setting is displayed only for a Position-proportional Model.

6-7 Initial Setting Level

6

ō ItH	Simple Transfer Output 1 Upper Limit	**E5CC-U, E5DC, E5DC-B, or E5GC only.**
		There must be a linear current output.
		The Control Output 1 Assignment parameter must
		specify the simple transfer SP, simple transfer
ō ItL	Simple Transfer Output 1 Lower Limit	**ramp SP, simple transfer PV, simple transfer MV**
		(heating), or simple transfer MV (cooling).

Function

- This parameter sets the upper and lower limit values for simple transfer output 1.
- You can use this parameter only for the E5CC-U, E5DC, E5DC-B, or E5GC.
  The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).

Setting

Transfer output type	Setting range		Default		Unit
			Transfer output lower limit	Transfer output upper limit	
Simple transfer SP	SP lower limit to SP upper limit		SP lower limit	SP upper limit	EU
Simple transfer ramp SP	SP lower limit to SP upper limit				
Simple transfer PV	Temperature input	Input setting range lower limit to input setting range upper limit	Input setting range lower limit	Input setting range upper limit	
	Analog input	Analog scaling lower limit to analog scaling upper limit	Scaling lower limit	Scaling upper limit	
Simple transfer MV (heating)	Standard	−5.0 to 105.0	0.0	100.0	%
	Heating/ cooling	0.0 to 105.0			
Simple transfer MV (cooling)*					

*　This function can be set for standard control, but the setting will be disabled.

Control Output 1 Assignment (Advanced Function Setting Level): Page 6-81

6

$E V - 1$ **Event Input Assignment 1**

$E V - 2$ **Event Input Assignment 2**

$E V - 3$ **Event Input Assignment 3**   **There must be event inputs.**

$E V - 4$ **Event Input Assignment 4**

$E V - 5$ **Event Input Assignment 5** `000`

$E V - 6$ **Event Input Assignment 6** `000`

- The following functions can be assigned to event inputs 1 to 6.
  - RUN/STOP
  - Auto/Manual Switch
  - Program Start
  - Invert Direct/Reverse Operation
  - SP Mode Switch
  - 100% AT Execute/Cancel
  - 40% AT Execute/Cancel
  - Setting Change Enable/Disable
  - Communications Writing Enable/Disable
  - Alarm Latch Cancel
  - Multi-SP No. Switching Bit 0
  - Multi-SP No. Switching Bit 1
  - Multi-SP No. Switching Bit 2

Function

- Default: Event Input Assignment 1:   *MSP0*
  - Event Input Assignment 2:   *StoP*
  - Event Input Assignment 3:   *NoNE*
  - Event Input Assignment 4:   *NoNE*
  - Event Input Assignment 5:   *NoNE*
  - Event Input Assignment 6:   *NoNE*
- Do not assign the same function to more than one event input.

Setting	Function
NoNE	None
StoP	RUN/STOP
MANU	Auto/Manual
PRSt	Program Start[1]
dRS	Invert Direct/Reverse Operation
RSP	SP Mode Switch[2]
At-2	100% AT Execute/Cancel
At-1	40% AT Execute/Cancel[3]
WtPt	Setting Change Enable/Disable
CMWt	Communications Writing Enable/Disable[4]
LAt	Alarm Latch Cancel
MSP0	Multi-SP No. Switching Bit 0[5]
MSP1	Multi-SP No. Switching Bit 1[5]
MSP2	Multi-SP No. Switching Bit 2[5]

Setting

[1] PRST (Program Start) can be set even when the Program Pattern parameter is set to OFF, but the function will be disabled.

[2] This function can be set only for a Digital Controller that supports a remote SP.

[3] This function can be set for heating/cooling control or for floating control for Position-proportional Models, but the setting will be disabled.

[4] This function can be set only for a Digital Controller that supports communications. Also, if a work bit is selected as the event input data, you cannot select communications writing enable/disable.

[5] The following table shows the relationships between the ON/OFF status of multi-SP number switching bits 0 to 2 and the set point.

Selected set point	Multi-SP No. switching bits		
	Bit 0	Bit 1	Bit 2
SP 0	OFF	OFF	OFF
SP 1	ON	OFF	OFF
SP 2	OFF	ON	OFF
SP 3	ON	ON	OFF
SP 4	OFF	OFF	ON
SP 5	ON	OFF	ON
SP 6	OFF	ON	ON
SP 7	ON	ON	ON

Note: Any bits that are not assigned to event inputs are treated as being OFF.

● **Related Parameter**

See

SP 0 to 7 (Adjustment Level): Page 6-26

CLFL   **Close/Floating**   **A Position-proportional Model must be used.**

Function

• The Close/Floating parameter is used to set the control method for a Position-proportional Model.

Setting

Setting range	Default
FLoE: Floating control	FLoE
CLoS: Close control	

VMSL   **Valve Opening Monitor**   **Floating control must be used**
              Selection   800   **(Position-proportional Model).**

Function

• Select the value to monitor for the valve opening.
• If you select the measured opening, the valve opening that was measured with a potentiometer is displayed.
• If you select the estimated opening, the valve opening estimated by the Digital Controller is displayed.
• You can use this parameter only with the E5EC-PR□-8□□ or E5AC-PR□-8□□. (The Digital Controller must be manufactured in August 2014 or later (version 2.2 or higher).)

Setting

Setting range	Default
MEAS: Measured opening	MEAS
ESTM: Estimated opening	

CALb   **Motor Calibration**   **A Position-proportional Model must be used.**

Function

The Motor Calibration parameter is used to calibrate the valve position and automatically set the travel time from completely open to completely closed. You can then check the valve opening with the Valve Opening Monitor parameter.

Operation

If you set the Motor Calibration parameter to ON, the valve will open completely and close completely, and then the setting of the parameter will change to OFF when the measurement has been completed. "ERR" will be displayed if any of the following errors occurs during execution. If an error occurs, check the wiring and other factors and execute motor calibration again.

• The potentiometer input value does not change or changes backward between completely open and completely closed because the wiring is wrong.
• The value of the potentiometer input is incorrect because of a broken wire, noise, or other factor.

   *   Do not change to any other parameter during calibration.

● **Related Parameters**

See

Travel Time (Initial Setting Level): Page 6-60

M̄ōt   **Travel Time**   **A Position-proportional Model must be used.**

Function

The Travel Time parameter is set to the time from when the valve is completely open until it is completely closed. The Travel Time parameter is set automatically when motor calibration is performed.

Operation

Setting range	Unit	Default
1 to 999	Seconds	30

● **Related Parameters**

Motor Calibration (Initial Setting Level): Page 6-59

SQR   **Extraction of Square Root Enable**   **An analog input must be supported.**
         000

Function

This parameter enables and disables square root extraction.

Setting

Setting range	Default
ōN: Enabled, ōFF: Disabled	OFF

● **Related Parameter**

See
Extraction of Square Root Low-cut Point (Adjustment Level): Page 6-36

AM̄ōν   **Move to Advanced Function**   **The Initial Setting/Communications Protect**
          Setting Level   **parameter must be set to 0.**

Function

• Set the Move to Advanced Function Setting Level parameter set value to "−169."
• Move to the advanced function setting level either by pressing ⊙ Key or ⊖ Key or by waiting or two seconds to elapse.

● **Related Parameter**

See
Initial Setting/Communication Protect (Protect Level): Page 6-4

6-8　Advanced Function Setting Level

The Advanced Function Setting Level is used for optimizing Digital Controller performance. To move to this level, input the password ("−169") from the Initial Setting Level.

To be able to enter the password, the Initial Setting/Communications Protect parameter in the Protect Level must be set to 0.

Moving to Advanced Function Setting Level

1　Move from the Operation Level to the Protect Level.

2　Display the Initial Setting/Communications Protect parameter.

```
ⅭⅭPⴊ
    ⅰ
```

Initial Setting/ ← Communications Protect

← Set 0. Default: 1
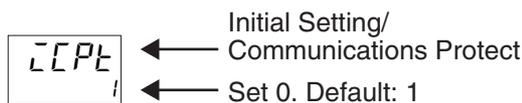

3　Change the set value to 0.

4　Move from the Protect Level to the Operation Level to the Initial Setting Level.

5　Display the Move to Advanced Function Setting Level parameter.

```
AMⴧⅴ
    0
```

Move to Advanced ← Function Setting Level

← Set −169. Default: 0
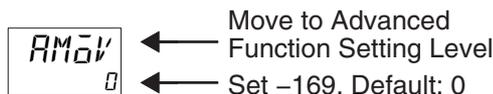

6　Change the set value to −169.

7　The Advanced Function Setting Level is displayed.

ⅭNⅭⴊ (INIT) will be displayed.

- The parameters in this level can be used when the Initial Setting/Communications Protect parameter is set to 0.
- To switch between setting levels, press the ⌷ Key.
- To change set values, press the ⌃ and ⌄ Keys.

Power ON

Operation Level ⟷ Adjustment Level

Press the ⌷ Key for less than 1 s.

Press the ⌷ Key for at least 1 s. to flash the display.

Press the ⌷ Key for at least 1 s.

```
−25
 ̅100
```

Press the ⌷ Key for at least 3 s.

Control stops.

Initial Setting Level ⟷ Communications Setting Level

Press the ⌷ Key for less than 1 s.

Press the ⌷ Key for at least 1 s.

Password input set value −169

Advanced Function Setting Level

Control in progress

Control stopped

INIT   **Parameter Initialization**

Function

- This parameter returns all parameter settings to their defaults.
- After the initialization, the set value automatically turns OFF.

Setting

Setting range		Default
oFF:	Initialization is not executed.	*oFF*
FACt:	Initializes to the factory settings described in the manual.	

MSPU   **Number of Multi-SP Points**

The Digital Controller must not have event inputs or the Event Input Assignment 1 to Event Input Assignment 6 parameters must not be set to "Multi-SP No. switching bit 0" to "Multi-SP No. switching bit 2."

Function

This parameter sets the number of Multi-SP points that will be used with key operations (none or 2 to 8).

Setting

Setting range	Default
OFF, 2 to 8	OFF

SPRU   **SP Ramp Time Unit**   **The ST parameter must be set to OFF.**

Function

- This parameter sets the time unit for the rate of change during SP ramp operation.

Setting

Setting range	Default
S: EU/s, *M*: EU/min, *H*: EU/h	*M*

See   ● **Related Parameters**

Ramp SP Monitor (Operation Level): 6-10
SP Ramp Set Value and SP Ramp Fall Value (Adjustment Level): Page 6-33

RESE   Standby Sequence Reset   Alarm 1 to 4 type must be 5, 6, 7, 10, or 11.

Function

- This parameter selects the conditions for enabling reset after the standby sequence of the alarm has been canceled.
- Output is turned OFF when switching to the Initial Setting Level, Communications Setting Level, Advanced Function Setting Level, or Calibration Level.
- Condition A
  Control started (including when the power supply is turned ON), and an alarm value (alarm value upper/lower limit), the process value input shift, the process value slope coefficient, or the SP changed. However, the standby sequence will not be restarted if the SP is changed with a remote SP.
- Condition B
  Power ON
- The following example shows the reset action when the alarm type is lower-limit alarm with standby sequence.
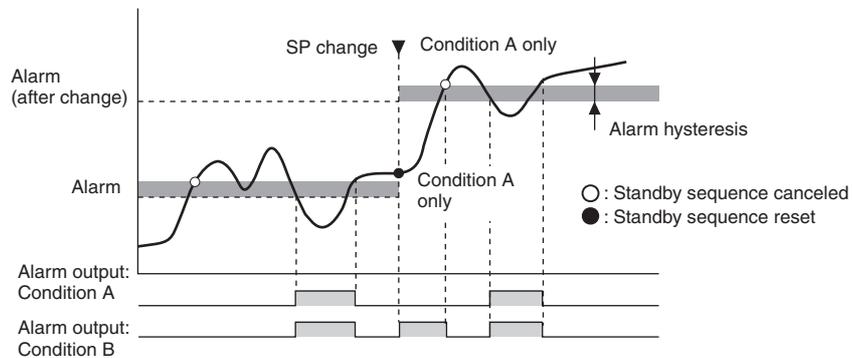

Setting

Setting range	Default
R: Condition A, b: Condition B	R

See

● **Related Parameters**

Alarm 1 to 4 Type (Initial Setting Level): Page 6-48
Alarm 1 to 4 Latch (Advanced Function Setting Level): Page 6-71

5b 1N	Auxiliary Output 1 Open in Alarm	Auxiliary output 1 must be assigned.
5b2N	Auxiliary Output 2 Open in Alarm	Auxiliary output 2 must be assigned.
5b3N	Auxiliary Output 3 Open in Alarm	Auxiliary output 3 must be assigned.
5b4N	Auxiliary Output 4 Open in Alarm	Auxiliary output 4 must be assigned.

Function
- This parameter sets the output status of auxiliary outputs 1 to 4.
- When Close in Alarm is set, the status of the auxiliary output function is output unchanged. When Open in Alarm is set, the status of the auxiliary output function is reversed before being output. The following table shows the relationship between the auxiliary output function, auxiliary output, and operation displays (SUB1 to SUB4).

Setting

	Auxiliary output function	Auxiliary output	Operation display (SUB1 to SUB4)
Close in Alarm	ON	ON	Lit
	OFF	OFF	Not lit
Open in Alarm	ON	OFF	Lit
	OFF	ON	Not lit

Setting range	Default
$N\text{-}o$: Close in alarm, $N\text{-}C$: Open in alarm	$N\text{-}o$

Auxiliary Output 1 to 4 Assignment (Advanced Function Setting Level): Page 6-82

| HbU | HB ON/OFF | HB and HS alarms must be supported.
A Control Output Assignment or Auxiliary Output Assignment must be set to a heater alarm or heater burnout alarm. |

Function
- Set to use the heater burnout alarm.

Setting

Setting range	Default
oN: Enabled, oFF: Disabled	oN

6-8 Advanced Function Setting Level

6

HbL	Heater Burnout Latch	HB and HS alarms must be supported. The HB ON/OFF parameter must be set to ON.

Function

- When this parameter is set to ON, the heater burnout alarm is held until either of the following conditions is satisfied.
  - a   Heater burnout detection is set to 0.0 A.
  - b   The power is cycled.
  - c   The latch is cancelled by the PF Key.
       (PF Setting = LAT: Alarm Latch Cancel)
  - d   The latch is cancelled by an event input.
       (Event Input Assignment 1 to Event Input Assignment 6 = LAT: Alarm Latch Cancel)
- Output is turned OFF when switching to the Initial Setting Level.

Setting

Setting range	Default
$\bar{o}N$: Enabled, $\bar{o}FF$: Disabled	$\bar{o}FF$

PF Setting (Advanced Function Setting Level): Page 6-90

HbH	Heater Burnout Hysteresis	The HB ON/OFF parameter must be set to ON. The Heater Burnout Latch parameter must be set to OFF. HB and HS alarms must be supported.

Function

- This parameter sets hysteresis for heater burnout detection.

Setting

Setting range	Unit	Default
0.1 to 50.0	A	0.1

See

● **Related Parameters**

HB ON/OFF (Advanced Function Setting Level): Page 6-65

5ᴸ- b   **ST Stable Range**

Temperature input, standard control, 2-PID control must be set.
The ST parameter must be set to ON.

Function

• The setting of this parameter determines when ST operates.
  This parameter cannot be used when ST is set to OFF.

Setting

Setting range	Unit	Default
0.1 to 999.9	°C or °F	15.0

● **Related Parameters**

See
Input Type (Initial Setting Level): Page 6-43
PID ON/OFF (Initial Setting Level): Page 6-45
ST (Initial Setting Level): Page 6-46

ALFA   α

2-PID control must be set.
The ST parameter must be set to OFF.

Function

• Normally, use the default for this parameter.
• This parameter sets the 2-PID control a constant.

Setting

Setting range	Default
0.00 to 1.00	0.65

● **Related Parameters**

See
PID ON/OFF (Initial Setting Level): Page 6-45
ST (Initial Setting Level): Page 6-46

ᴸīdU   **Integral/Derivative Time Unit**   **Control must be set to 2-PID control.**

Function

This parameter sets the time unit for the Integral Time, Integral Time (Cooling), Derivative Time, and Derivative Time (Cooling) parameters.

Setting

Setting range	Unit	Default
1 to 0.1	Seconds	1

Note: The Integral/Derivative Time Unit parameter changes to 0.1 when the RT (robust tuning) parameter is changed from OFF to ON.

● **Related Parameters**

See
Integral Time and Derivative Time (Adjustment Level): Page 6-28
Derivative Time (Cooling) and Integral Time (Cooling) (Adjustment Level): Page 6-29

Яㄷ-Ġ   **AT Calculated Gain** `000`

Control must be set to 2-PID control.

Яㄷ-H   **AT Hysteresis** `000`

LㄷMЯ   **Limit Cycle MV Amplitude** `000`   **Control must be set to 2-PID control or close position-proportional control.**

Function

- Normally use the default values for these parameters.
- The AT Calculated Gain parameter sets the gain for when PID values are calculated using AT. When emphasizing response, decrease the set value. When emphasizing stability, increase the set value.
- The AT Hysteresis parameter sets the hysteresis for limit cycle operation during autotuning when switching ON and OFF.
- The Limit Cycle MV Amplitude parameter sets the MV amplitude for limit cycle operation during autotuning.

Setting

Parameter name	Setting range	Unit	Default
AT Calculated Gain	0.1 to 10.0	---	Standard Model: 0.8 Position-proportional Model: 1.0
AT Hysteresis	Temperature input: 0.1 to 999.9	°C	0.8
		°F	1.4
	Analog input: 0.01 to 9.99	%FS	0.20
Limit Cycle MV Amplitude	5.0 to 50.0	%	20.0

● **Related Parameters**

See   AT Execute/Cancel (Adjustment Level): Page 6-20

ㄷNF   **Input Digital Filter**

Function

- This parameter sets the time constant for the input digital filter. The following diagram shows the effect on data after passing through the digital filter:
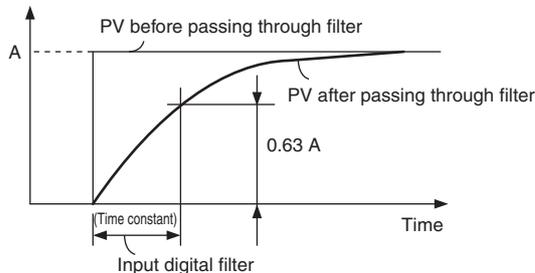

Setting

Setting range	Unit	Default
0.0 to 999.9	Seconds	0.0

MAV   **Moving Average Count**

Function

- This parameter sets the number of inputs to include in the moving average. The data after moving average processing is illustrated in the following figure.

Input data   Operation result
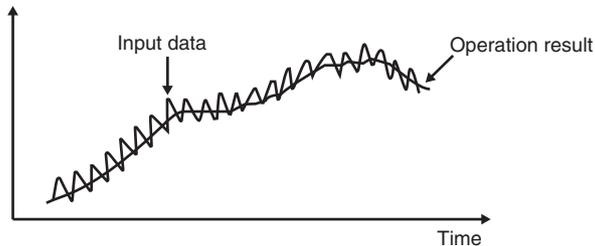

Time

- Use a moving average to suppress rapid changes in the input.

Setting

Setting range	Unit	Default
OFF, 2, 4, 8, 16, or 32	Times	OFF*

*The default is 8 for models other than the E5□C-□-0□.

PMAV   **FB Moving Average Count** 800   **Position-proportional Models**

Function

- You can set the moving average count for the FB input. The data after moving average processing is illustrated in the following figure.

Input data   Operation result

Time
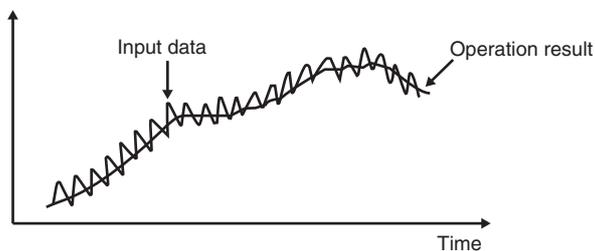

- Use a moving average to suppress rapid changes in the FB input.
- You can use this parameter only with the E5EC-PR□-8□□ or E5AC-PR□-8□□. (The Digital Controller must be manufactured in August 2014 or later (version 2.2 or higher).)

Setting

Setting range	Unit	Default
OFF, 2, 4, 8, 16, or 32	Times	16

ō-dP   MV Display   A Standard Model must be used.

Function

This parameter is used to display the manipulated variable (MV).
The manipulated variable is displayed when the MV Monitor (Heating) and MV Monitor (Cooling) parameters are set to ON, and not displayed when these parameters are set to OFF.

Setting

Setting range	Default
ōN: Displayed, ōFF: Not displayed	ōFF

See

● **Related Parameters**

MV Monitor (Heating) (Operation Level): Page 6-16
MV Monitor (Cooling) (Operation Level): Page 6-16

REt   Automatic Display Return Time

Function

• In the Operation Level, Adjustment Level, or Monitor/Setting Item Level, the display automatically returns to the PV/SP if there are no key operations for the time set for this parameter.
• The automatic display return time is disabled when the parameter is set to OFF. (In that case, the display will not be automatically switched.)

Setting

Setting range	Unit	Default
OFF, 1 to 99	Seconds	ōFF

bRGt   Display Brightness 000

Function

This parameter sets the display brightness to one of three levels. Adjust the level if the display is too bright.

Setting

Setting range	Default
1 (dark) to 3 (bright)	3

$R\,IL\,E$	**Alarm 1 Latch**	**Alarm 1 must be assigned, and the alarm 1 type must not be 0.**
$R2L\,E$	**Alarm 2 Latch**	**Alarm 2 must be assigned, and the alarm 2 type must not be 0 or 12.**
$R3L\,E$	**Alarm 3 Latch**	**Alarm 3 must be assigned, and the alarm 3 type must not be 0 or 12.**
$R4L\,E$	**Alarm 4 Latch**	**Alarm 4 must be assigned, and the alarm 4 type must not be 0 or 12.**

Function

- When this parameter is set to ON, the alarm function is held until one of the following conditions is satisfied.
  - a The power is cycled.
  - b The latch is cancelled by the PF Key.
    (PF Setting = LAT: Alarm Latch Cancel)
  - c The latch is cancelled by an event input.
    (Event Input Assignment 1 to Event Input Assignment 6 = LAT: Alarm Latch Cancel)
- The output is turned OFF when switching to the Initial Setting Level, Communications Setting Level, Advanced Function Setting Level, or Calibration Level.
- If an auxiliary output is set to close in alarm, the output is kept closed. If it is set to open in alarm, it is kept open.
- If an alarm OFF delay is set, the alarm latch will not be canceled immediately even if condition b or c is met. It will be canceled after the time set for the OFF delay has expired.

Setting

Setting range	Default
$\bar{o}N$: Enabled, $\bar{o}FF$: Disabled	$\bar{o}FF$

PRLt   Move to Protect Level Time

Function

- This parameter sets the key pressing time required to move to the Protect Level from the Operation Level, the Adjustment Level, or Monitor/Setting Item Level.

Setting

Setting range	Unit	Default
1 to 30	Seconds	3

CJC   Cold Junction Compensation Method   Input type must be thermocouple or infrared temperature sensor

---

Function

- This parameter specifies whether cold junction compensation is to be performed internally by the Digital Controller or to be performed externally when the input type setting is 5 to 24.
- The cold junction compensation external setting is enabled when the temperature difference is measured using two thermocouples or two ES1B Sensors.

Setting

Setting range	Default
ōN: Internally, ōFF: Externally	ōN

● **Related Parameters**

See

Input Type (Initial Setting Level): Page 6-43

$R~l\bar{o}N$	**Alarm 1 ON Delay**	**Alarm 1 must be assigned, and the alarm 1 type must not be 0, 12, or 13.**
$R2\bar{o}N$	**Alarm 2 ON Delay**	**Alarm 2 must be assigned, and the alarm 2 type must not be 0, 12, or 13.**
$R3\bar{o}N$	**Alarm 3 ON Delay**	**Alarm 3 must be assigned, and the alarm 3 type must not be 0, 12, or 13.**
$R4\bar{o}N$	**Alarm 4 ON Delay**	**Alarm 4 must be assigned, and the alarm 4 type must not be 0, 12, or 13.**

The alarm 1, 2, 3, or 4 output is prevented from turning ON until after the delay times set in these parameters have elapsed.

Function
• Set the time for which the ON delay is to be enabled.
• To disable the ON delay, set 0.

Setting

Setting range	Unit	Default
0 to 999	Seconds	0

● **Related Parameters**

See

Alarm 1 to 4 Type (Initial Setting Level): Page 6-48

● **Related Parameters**

Auto/Manual Switch (Operation Level): Page 6-9

MANL **Manual Output Method** **Control must be set to 2-PID control.**
A Position-proportional Model set to Close Control with the Direct Setting of Position-proportional MV parameter set to ON must be used.

Function

If this parameter is set to HOLD when control moves from Automatic Mode to Manual Mode, the final MV from Automatic Mode will be used as the initial manual MV. If this parameter is set to INT, the setting of the Manual MV Initial Value parameter will be used as the initial manual MV.

Setting

Setting range	Default
$Hold$: HOLD, $iNit$: INIT	$Hold$

See

● **Related Parameters**

Manual MV Initial Value (Advanced Function Setting Level): 6-76

MANL   **Manual MV Initial Value**

Control must be set to 2-PID control.
A Position-proportional Model set to Close Control
with the Direct Setting of Position-proportional MV
parameter set to ON must be used.

Function

This parameter sets the initial value of the manual MV to use after control moves from Automatic Mode to Manual Mode.

Setting

Setting range	Unit	Default
Standard control: −5.0 to 105.0	%	0.0
Heating/cooling control: −105.0 to 105.0		

If the Manual MV Limit Enable parameter is set to ON, the setting range will be the MV lower limit to the MV upper limit.

See

● **Related Parameters**

Manual Output Method (Advanced Function Setting Level): Page 6-75
Manual MV Limit Enable (Advanced Function Setting Level): Page 6-88

RE **RT** 000

Control must be set to 2-PID control. If the input type is set for a temperature input, either the Standard or Heating/Cooling parameter must be set to standard control or, if the Standard or Heating/Cooling parameter is set to heating/cooling control, the Heating/Cooling Tuning Method parameter must not be set to air or water cooling.
Or, a Position-proportional Model must be used.

This parameter executes robust tuning (RT).

Function

- When AT or ST is executed with RT selected, PID constants are automatically set which make it hard for control performance to degenerate even when control object characteristics are changed.
- Even when hunting occurs for PID constants when AT or ST is executed in normal mode, it is less likely to occur when AT or ST is executed in RT mode.

Setting

Setting range	Default
$\bar{o}N$: RT function ON, $\bar{o}FF$: RT function OFF	$\bar{o}FF$

Note: The Integral/Derivative Time Unit parameter changes to 0.1 when the RT (Robust Tuning) parameter is changed from OFF to ON.

$H5U$ **HS Alarm Use**

HB and HS alarms must be supported.
A Control Output Assignment or Auxiliary Output Assignment must be set to a heater alarm or HS alarm.

Function

- Set this parameter to use HS alarms.

Setting

Setting range	Default
$\bar{o}N$: Enabled, $\bar{o}FF$: Disabled	$\bar{o}N$

HSL   **HS Alarm Latch**   **HB and HS alarms must be supported.**
The HS Alarm Use parameter must be set to ON.

Function

- When this parameter is set to ON, the HS alarm is held until any of the following conditions is satisfied.
    - a   The HS alarm current is set to 50.0 A.
    - b   The power is cycled.
    - c   The latch is cancelled by the PF Key.
      (PF Setting = LAT: Alarm Latch Cancel)
    - d   The latch is cancelled by an event input.
      (Event Input Assignment 1 to Event Input Assignment 6 = LAT: Alarm Latch Cancel)
- Output is turned OFF when switching to the Initial Setting Level, Communications Setting Level, Advanced Function Setting Level, or Calibration Level.

Setting

Setting range	Default
oN: Enabled, *oFF*: Disabled	*oFF*

HSH   **HS Alarm Hysteresis**   **HB and HS alarms must be supported.**
The HS Alarm Use parameter must be set to ON.
The HS Alarm Latch parameter must be set to OFF.

Function

- This parameter sets the hysteresis for HS alarms.

Setting

Setting range	Unit	Default
0.1 to 50.0	A	0.1

● **Related Parameters**

See

HS Alarm Use (Advanced Function Setting Level): Page 6-77

$L\,bR$ **LBA Detection Time**

A Standard Model must be used.
Alarm 1 must be assigned.
The alarm type must be set to 12 (LBA).

This parameter enables or disables the LBA function and sets the detection time interval.

Function

• To disable the LBA function, set 0.

Setting

Setting range	Unit	Default
0 to 9999	Seconds	0

See

● **Related Parameters**

Alarm 1 to 4 Type (Initial Setting Level): Page 6-48
LBA Level (Advanced Function Setting Level): Page 6-79
LBA Band (Advanced Function Setting Level): Page 6-80

$L\,bRL$ **LBA Level**

A Standard Model must be used.
Alarm 1 must be assigned.
The alarm type must be set to 12 (LBA).
The LBA detection time must not be 0.

Function

• This parameter sets the LBA level.
• If the deviation between the SP and PV exceeds the LBA level, a loop burnout is detected.

Setting

Setting range		Unit	Default
Temperature input	0.1 to 999.9	°C or °F	8.0
Analog input	0.01 to 99.99	%FS	10.00

See

$LbAb$ **LBA Band**

A Standard Model must be used.
Alarm 1 must be assigned.
The alarm type must be set to 12 (LBA).
The LBA detection time must not be 0.

Function

- This parameter sets the LBA band.
- If a control deviation greater than the LBA band is not reduced when the LBA level is exceeded, an loop burnout is detected.

Setting

Setting range		Unit	Default
Temperature input	0.0 to 999.9	°C or °F	3.0
Analog input	0.00 to 99.99	%FS	0.20

$WR7$:	Work bit 7[*4]	
$WR8$:	Work bit 8[*4]	

*1   If $C-o$ is assigned for standard control, a value equivalent to 0% will be output.
*2   · If heating/cooling control is selected for the E5CC, E5CC-B, E5CC-U, E5DC, or E5DC-B when there is only one control output, the auxiliary output 2 terminal is assigned as the control output for cooling. (If the Digital Controller has only one auxiliary output, an output is not automatically allocated for the control output for cooling.)
      · If heating/cooling control is selected for the E5EC, E5EC-B, or E5AC when there is only one control output, the auxiliary output 4 terminal is assigned as the control output for cooling. (If the Digital Controller has only two auxiliary outputs, auxiliary output 2 is allocated as the control output for cooling.)
      · When heating/cooling control is selected for the E5GC, auxiliary output 1 is assigned as the control output for cooling.

*3   Can be selected when the Program Pattern parameter is set to OFF, but the function will be disabled.
*4   WR1 to WR8 are not displayed when the logic operation function is not used.
*5   If the Digital Controller is equipped with HB/HS alarm detection, it is set by default to HR (Heater Alarm).

ALMA   **Integrated Alarm Assignment**   **The integrated alarm must be assigned.**

Function

You can use the integrated alarm to output an OR of alarm 1, alarm 2, alarm 3, alarm 4, the HB alarm, the HS alarm, the input alarm, and the RSP input alarm. Set this parameter to the sum of the codes of the status for which to output an OR.

The default is 49 (i.e., an OR of alarm 1, the HB alarm, and the HS alarm is output). The alarm 1 code is 1, the HB alarm code is 16, and the HS alarm code is 32: 1 + 16 + 32 = 49.

Setting

Code	Status
+1	Alarm 1
+2	Alarm 2
+4	Alarm 3
+8	Alarm 4
+16	HB alarm
+32	HS alarm
+64	Input error
+128	RSP input error

Setting range	Default
0 to 255	49

See

$AL5P$ **Alarm SP Selection** `000`   **Alarm 1 to alarm 4 must be assigned.**
The SP Ramp Set Value parameter must not be set to OFF and the SP Ramp Fall Value parameter must not be set to SAME or OFF. The ST parameter must be set to OFF.
The alarm type must be set to 1, 2, 3, 4, 5, 6, 7, 14, 15, 18, or 19.

This parameter sets whether the set point that triggers the alarm is the ramp SP or target SP.

Setting

Setting range	Default
$5P$-M: Ramp SP, $5P$: SP	$5P$-M

See

● **Related Parameters**

SP Ramp Set Value and SP Ramp Fall Value (Adjustment Level): Page 6-33
ST (Self-tuning) (Initial Setting Level): Page 6-46

$RS\text{-}t$ **Remote SP Input** 000

There must be a remote SP input.
The ST (self-tuning) parameter must be set to OFF (default: ON).

Function

This parameter sets the input type for the remote SP.

Setting

Setting range	Default
$4\text{-}20$: 4 to 20mA	
$0\text{-}20$: 0 to 20mA	
$1\text{-}5V$: 1 to 5V	$4\text{-}20$
$0\text{-}5V$: 0 to 5V	
$0\text{-}10$: 0 to 10V	

See

● **Related Parameters**

ST (self-tuning) (Initial Setting Level): Page 6-46

$RSPU$ **Remote SP Enable** 000

There must be a remote SP input.
The ST (self-tuning) parameter must be set to OFF (default: ON).

Function

This parameter is set to ON to enable setting SP Mode. You can set the SP Mode parameter to LSP to select a local SP or to RSP to select a remote SP. If this parameter is set to OFF, only a local SP can be used.

Setting

Setting range	Default
oN: Enabled or oFF: Disabled	oFF

See

● **Related Parameters**

SP Mode (Adjustment Level): Page 6-21
ST (self-tuning) (Initial Setting Level): Page 6-46

RSPH	**Remote SP Upper Limit** `000`	**There must be a remote SP input.**
		The ST (self-tuning) parameter must be set to OFF (default: ON).
RSPL	**Remote SP Lower Limit** `000`	**The Remote SP Enable parameter must be set to ON (default: OFF).**

Function

You can scale the remote SP input for the PV input range with the values that are set for the Remote SP Upper and Lower Limit parameters.

Remote SP Input of 4 to 20 mA

- The remote SP input can be from the remote SP lower limit −10% to the remote SP upper limit +10%. Input values outside of this range are treated as out-of-range input values (RSP input errors) and clamped to the upper or lower limit. The RSP indicator will flash in Remote SP Mode. Also, the Remote SP Monitor will flash on the No. 2 display in any SP Mode.
- When you use the remote SP input value as the control SP, it is restricted by the set point upper limit and the set point lower limit.

Setting

Parameter	Setting range	Unit	Default
Remote SP Upper Limit	Temperature input: Input setting range lower limit to Input setting range upper limit	EU	1300
Remote SP Lower Limit	Analog input: Scaling lower limit to Scaling upper limit		−200

See

$5PLR$ **SP Tracking** `000`

There must be a remote SP input.
The ST (self-tuning) parameter must be set to OFF (default: ON).
The Remote SP Enable parameter must be set to ON (default: OFF).

Function

- This parameter sets the operation to perform when moving from Remote SP Mode to Local SP Mode.
- When this parameter is set to ON, operation continues using the remote SP as the local SP.
- When this parameter is set to OFF, the remote SP does not affect the local SP.

Setting

Setting range	Default
$\bar{o}N$: Enabled or $\bar{o}FF$: Disabled	$\bar{o}FF$

P-db **PV Dead Band**   **A Position-proportional Model must be used.**

Function

When the PV enters the PV dead band, any unnecessary output is stopped to prevent the valve from deteriorating.
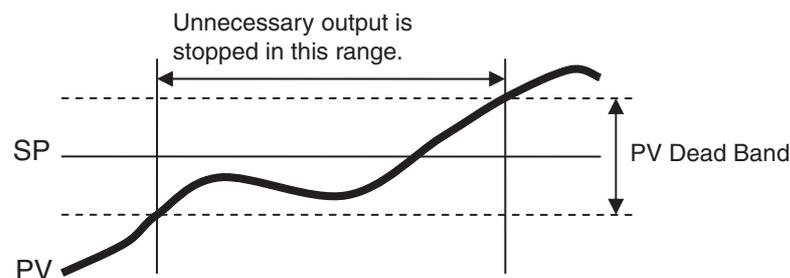

Setting

Setting range	Unit	Default
0 to 9999	EU	0

● **Related Parameters**

See

Close/Floating, Motor Calibration, and Travel Time (Initial Setting Level): Page 6-59
Position Proportional Dead Band (Adjustment Level): Page 6-35, Open/Close Hysteresis (Adjustment Level): Page 6-36

MANL   **Manual MV Limit Enable** `000`   Control must be set to 2-PID control.
Close control must be used (Position-proportional Model).

Function

- This parameter sets whether the MV Upper Limit and MV Lower Limit parameters are to be enabled for manual MV in Manual Mode.

Setting

Setting range	Default
ο̄N: Enabled, ο̄FF: Disabled	ο̄FF

See   ● **Related Parameters**

MV Upper Limit (Adjustment Level): Page 6-34
MV Lower Limit (Adjustment Level): Page 6-34

PMVd   **Direct Setting of Position Proportional MV**   Close control must be used (Position-proportional Model).

Function

- The Direct Setting of Position Proportional MV parameter can be set to ON to enable specifying the valve open with the MV at Stop, MV at PV Error, and Manual MV parameters.

Setting

Setting range	Default
ο̄N: Enabled, ο̄FF: Disabled	ο̄FF

See   ● **Related Parameters**

MV at Stop and MV at PV Error (Adjustment Level): Page 6-32 and Page 6-33
PV/MV (Manual MV): Page 6-40

PVRP   **PV Rate of Change Calculation Period**   Alarms 1, 2, 3, and 4 must be assigned. The alarm type must be set to 13.

Function

- The change width can be found for PV input values in any set period. Differences with previous values in each set period are calculated, and an alarm is output if the results exceed the alarm value.
- The PV rate of change calculation period can be set in units of 50 ms (sampling period).

Setting

Setting range	Unit	Default
1 to 999	Sampling cycle	20 (1 s)

Process Value/Set Point (Operation Level): Page 6-8
Alarm 1 to 4 Type (Initial Setting Level): Page 6-48

HCtM   Heating/Cooling Tuning Method

The control must be set to heating/cooling control and 2-PID control.

Function

This parameter sets the tuning method that is suitable for the cooling control characteristics.

Setting

Setting range	Default
0: Same as heating control 1: Linear 2: Air cooling 3: Water cooling	0

- Air Cooling/Water Cooling
  Control that is suitable for an application that does not have linear cooling characteristics (such as plastic molding machines) is performed. The response is fast and the response characteristics are stable.
- Linear
  Control that is suitable for an application that has linear cooling characteristics is performed.
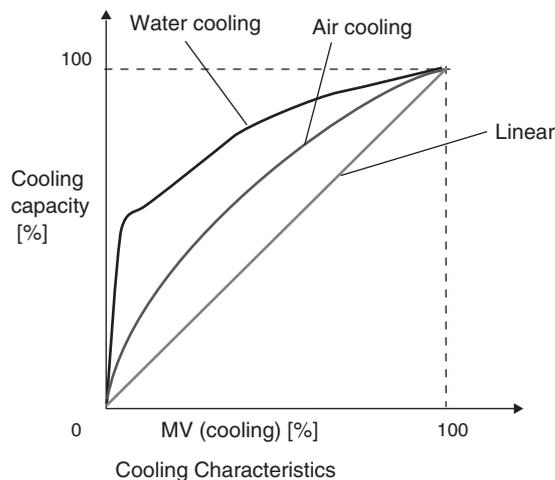

Cooling Characteristics

ōMPW   Minimum Output ON/OFF Band

**A Standard Model must be used.
The control must be set to 2-PID control.**

Function

This parameter sets the minimum ON/OFF width of the outputs that are assigned for the heating and cooling control outputs. You can set this parameter to prevent deterioration of a relay output.

Setting

Setting range	Unit	Default
0.0 to 50.0	%	1.0

6-8 Advanced Function Setting Level

6

PF PF Setting

Function

• This parameter sets the function of the PF Key.

Setting

• The default is SHFT (Digit Shift).

Set value	Setting	Function
OFF: oFF	Disabled	Does not operate as a function key.
RUN: RUN	RUN	Specifies RUN status.[5]
STOP: $StoP$	STOP	Specifies STOP status.[5]
R-S: $R-S$	Reversing RUN/STOP operation	Specifies reversing RUN/STOP operation status. [5]
AT-2: $At-2$	100%AT Execute/Cancel	Specifies reversing 100% AT Execute/Cancel status. [1][5]
AT-1: $At-1$	40%AT Execute/Cancel	Specifies reversing 40% AT Execute/Cancel status. [1][4][5]
LAT: LAt	Alarm Latch Cancel	Specifies canceling alarm latches. [2][5]
A-M: $A-M$	Auto/Manual	Specifies reversing Auto/Manual status. [3][5]
PFDP: $PFdP$ **000**	Monitor/Setting Item	Specifies the monitor/setting item display. Select the monitor/setting item using the Monitor/Setting Item 1 to 5 parameters (Advanced Function Setting Level).
SHFT: $SHFt$	Digit Shift	Operates as a Digit Shift Key when settings are being changed.

[1] When AT cancel is specified, it means that AT is cancelled regardless of whether the AT currently being executed is 100% AT or 40% AT.

[2] Alarms 1 to 4, the HB alarm, and the HS alarm are cancelled.

[3] For details on auto/manual operations using the PF Key, refer to *5-12 Performing Manual Control*.

[4] This function will be disabled if it is selected for heating and cooling control or for floating control with a Position-proportional Model.

[5] The function that is set for the PF Key is disabled if the same function is assigned to an event input.

● **Related Parameters**

See

Monitor/Setting Item 1 to 5 (Advanced Function Setting Level): Page 6-91

PFd1   **Monitor/Setting Item 1** `000`

PFd2   **Monitor/Setting Item 2** `000`

PFd3   **Monitor/Setting Item 3** `000`   **The PF Setting parameter must be set to PFDP.**

PFd4   **Monitor/Setting Item 4** `000`

PFd5   **Monitor/Setting Item 5** `000`

Function

- When the PF Key is set to display monitor/setting items, pressing the PF Key will display in order the contents of the Monitor/Setting Item 1 to 5 parameters. The contents of these parameters are shown in the following table. Refer to the relevant parameters for the setting/monitor ranges.

Set value	Setting	Remarks	
		Monitor/Setting	Display
0	Disabled		---
1	PV/SP/Multi-SP	Can be set. (SP)[*1]	---
2	PV/SP/MV (valve opening for Position-proportional Models)	Can be set. (SP)[*1]	---
3	PV/SP/Soak time remain	Can be set. (SP)[*1]	---
4	Proportional band	Can be set.	P
5	Integral time	Can be set.	$\bar{\iota}$
6	Derivative time	Can be set.	d
7	Alarm value 1	Can be set.	$RL-1$
8	Alarm value upper limit 1	Can be set.	$RL\,1H$
9	Alarm value lower limit 1	Can be set.	$RL\,1L$
10	Alarm value 2	Can be set.	$RL-2$
11	Alarm value upper limit 2	Can be set.	$RL2H$
12	Alarm value lower limit 2	Can be set.	$RL2L$
13	Alarm value 3	Can be set.	$RL-3$
14	Alarm value upper limit 3	Can be set.	$RL3H$
15	Alarm value lower limit 3	Can be set.	$RL3L$
16	Alarm value 4	Can be set.	$RL-4$
17	Alarm value upper limit 4	Can be set.	$RL4H$
18	Alarm value lower limit 4	Can be set.	$RL4L$
19	PV/SP/Internal SP	Can be set. (SP)[*1]	---
20	PV/SP/Alarm Value 1[*2]	Can be set. (SP)[*1]	---

22	Integral Time (Cooling)	Can be set.	$C-\bar{\iota}$
23	Derivative Time (Cooling)	Can be set.	$C-d$

*1   With the E5CC, E5CC-B, E5CC-U, E5DC, E5DC-B, or E5GC only the PV and SP can be displayed.

*2   The Alarm Value 1 parameter is displayed even if the Alarm 1 Type parameter is set for no alarm. However, any value that is set is not valid.

5Pd1   PV/SP No. 1 Display Selection

5Pd2   PV/SP No. 2 Display Selection

Function

These parameters set the items to display on the No. 1 display, No. 2 display, and No. 3 display.

Setting

Set value	No. 1 display	No. 2 display	No. 3 display (E5EC, E5EC-B, and E5AC only)
0	Nothing is displayed.	Nothing is displayed.	Nothing is displayed.
1	Process value	Set point	Nothing is displayed.
2	Process value	Nothing is displayed.	Nothing is displayed.
3	Set point	SP (character display)	Nothing is displayed.
4	Process value	Set point	MV (valve opening for Position-proportional Models)
5	Process value	Set point	Multi-SP No.
6	Process value	Set point	Soak time remain 000
7	Process value	Set point	Internal set point (ramp SP)
8	Process value	Set point	Alarm value 1*

*   The Alarm Value 1 parameter is displayed even if the Alarm 1 Type parameter is set for no alarm. However, any value that is set is not valid.

Parameter	Setting range	Default
PV/SP No. 1 Display Selection	0 to 8	4*
PV/SP No. 2 Display Selection		0

*   The default is 1 for models other than the E5□C-□-0□.

ōdSL   MV Display Selection

A Standard Model with a No. 3 display (E5EC, E5EC-B, or E5AC) must be used and heating and cooling control must be used. The PV/SP No. 1 Display Selection or PV/SP No. 2 Display Selection parameter must be set to 4, or the PF Setting parameter must be set to PFDP and one of the monitor/setting items 1 to 5 must be set to 2.

Function

• This parameter selects the MV display for PV/SP/MV during heating and cooling control. Either heating MV or cooling MV can be selected.

Setting

Setting range	Default
ō: MV (heating) \n C-ō: MV (cooling)	ō

PⅤ dP   **PV Decimal Point Display** `000`   **The input type must be set for a temperature input.**

The display below the decimal point in the PV can be hidden for temperature inputs.

Function

- The PV decimals below the decimal point can be hidden by setting the PV Decimal Point Display parameter to OFF. When this parameter is set to ON, the display below the decimal point will appear according to the input type setting.

Setting

Setting range	Default
ōN: ON, ōFF: OFF	ON

● **Related Parameters**

See

Input Type (Initial Setting Level): Page 6-43

PⅤ St   **PV Status Display Function**

Function

- This parameter sets a control or alarm status that is displayed alternately in 0.5-s cycles on the No. 1 display when the PV is set to be displayed in the No. 1 display.[1]
- PV
- PV/SP[2]
- PV/Manual MV (Valve Opening)
- PV/SP/Manual MV (Valve Opening)
- [1]   This includes the displays specified with the PV/SP No. 1 and PV/SP No. 2 Display Selection parameters.
- [2]   This includes when the PV/SP is selected for the Monitor/Setting Item parameter.

Setting

Setting range		Default
ōFF:	No PV status display	ōFF
MANU:	MANU is alternately displayed during manual control.	
StōP:	STOP is alternately displayed while operation is stopped.	
ALM1:	ALM1 is alternately displayed during Alarm 1 status.	
ALM2:	ALM2 is alternately displayed during Alarm 2 status.	
ALM3:	ALM3 is alternately displayed during Alarm 3 status.	
ALM4:	ALM4 is alternately displayed during Alarm 4 status.	
ALM:	ALM is alternately displayed when Alarm 1, 2, 3, or 4 is set to ON.	
HA:	HA is alternately displayed when an HB alarm or HS alarm is ON.	
WR*:	While one or more of the work bits (WR1 to WR8) is ON, the message for the highest bit number that is ON is alternately displayed with the corresponding bit number.	

*   Selection is possible only with the E5DC, E5DC-B, and E5GC. (The D5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

Process Value/Set Point (Operation Level): Page 6-8
PV/MV (Manual MV) (Manual Control Level): Page 6-40

5V5t SV Status Display Function

Function
- This parameter sets a control or alarm status that is displayed alternately in 0.5-s cycles on the No. 2 display when the PV is set to be displayed in the No. 1 display.[1]
- PV
- PV/SP[2]
- PV/Manual MV (Valve Opening)
- PV/SP/Manual MV (Valve Opening)
- [1]   This includes the displays specified with the PV/SP No. 1 and PV/SP No. 2 Display Selection parameters.
- [2]   This includes when the PV/SP is selected for the Monitor/Setting Item parameter.

Setting

Setting range		Default
oFF:	No SV status display	oFF
MANU:	MANU is alternately displayed during manual control.	
StoP:	STOP is alternately displayed while operation is stopped.	
ALM1:	ALM1 is alternately displayed during Alarm 1 status.	
ALM2:	ALM2 is alternately displayed during Alarm 2 status.	
ALM3:	ALM3 is alternately displayed during Alarm 3 status.	
ALM4:	ALM4 is alternately displayed during Alarm 4 status.	
ALM:	ALM is alternately displayed when Alarm 1, 2, 3, or 4 is set to ON.	
HA:	HA is alternately displayed when an HB alarm or HS alarm is ON.	
WR*:	While one or more of the work bits (WR1 to WR8) is ON, the message for the highest bit number that is ON is alternately displayed with the corresponding bit number.	

* Selection is possible only with the E5DC, E5DC-B, and E5GC. (The D5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

PV/MV (Manual MV) (Manual Control Level): Page 6-40

d.REF Display Refresh Period

Function
- This parameter delays the display refresh period for monitor values. Only display refreshing is delayed, and the refresh period for process values used in control is not changed.
- This function is disabled by setting the parameter to OFF.
  If this function is disabled, the display refresh period will be the same as the sampling period, 50 ms.

Setting

Setting range	Unit	Default
OFF, 0.25, 0.5, 1.0	Seconds	0.25

LCMЬ	**LCT Cooling Output Minimum ON Time**	**The control output on the cooling side must be a relay or voltage output.** **Heating/cooling control must be used, 2-PID control must be used, and the Heating/Cooling Tuning Method parameter must be set to air or water cooling.**

Function

- This parameters sets the minimum output ON time for the cooling-side control output during autotuning.
- Set the time in seconds that is required for the operation of the actuator that is connected to the cooling-side control.

Note: This parameter is not supported for E5CC, E5EC, and E5AC version 2.0 or lower.

Example: The following calculation is used when the configuration consists of the E5□C (with a relay output), a relay, and a solenoid valve.

(0.02 s (fixed) + 0.02 s + 0.06 s) $\times$ 2 (safety factor)= 0.2 s

*   The default setting of this parameter is based on the operating time of an actuator on a standard extruder.

Setting

Setting range	Unit	Default
0.1 to 1.0	Seconds	0.2

CMōⱴ	**Move to Calibration Level** `000`	**Initial setting/communications protect must be 0.**

This parameter sets the password to move to the Calibration Level.

Function

- Set the password to move to the Calibration Level. The password is 1201.
- Move to the Calibration Level either by pressing the ⊚ Key or ⊝ Key or by waiting for two seconds to elapse.

● **Related Parameter**

See

Initial Setting/Communications Protect (Protect Level): Page 6-4

6-9   Communications Setting Level

$P5EL$	**Protocol Setting**	**Communications must be supported.**
U-$N\bar{o}$	**Communications Unit No.**	
$bP5$	**Communications Baud Rate**	
LEN	**Communications Data Length**	**CompoWay/F must be selected as the protocol.**
$5b\bar{\iota}t$	**Communications Stop Bits**	**CompoWay/F must be selected as the protocol.**
$PRtY$	**Communications Parity**	**CompoWay/F or Modbus must be selected as the protocol.**
$5dWt$	**Send Data Wait Time**	

Function

- Each parameter is enabled when the power is reset.
- Match the communications specifications of the E5□C and the host computer. If multiple devices are connected, ensure that the communications specifications for all devices in the system (except the Communications unit number) are the same.

Setting

Item	Display	Set values	Settings	Default
Protocol setting	$P5EL$	EWF $M\bar{o}d$ EMP $F\bar{\iota}N5$ $MEP4$ $F×P4$	CompoWay/F Modbus Component communications Host Link (FINS) MC Protocol (format 4) Dedicated protocol (format 4)	EWF

User Calibration 000

7

7-1   User Calibration

The E5□C is correctly calibrated before it is shipped from the factory. Normally it does not need to be calibrated by the user.

If, however, it must be calibrated by the user, use the parameters for calibrating temperature input and analog input. OMRON, however, cannot ensure the results of calibration by the user. Also, calibration data is overwritten with the latest calibration results. The default calibration settings cannot be restored after user calibration. Perform user calibration with care.

● Calibrating Inputs

The input type selected in the parameter is used for calibration. The input types are as follows:

• Thermocouple:	16 types
• Infrared temperature sensor:	4 types
• Resistance thermometer:	5 types
• Current input:	2 types
• Voltage input:	3 types*

*1   There are four types of voltage inputs for E5CC-U Digital Controllers manufactured in May 2014 or later (version 2.2 or higher).

● Registering Calibration Data

The new calibration data for each item is temporarily registered. It can be officially registered as calibration data only when all items have been calibrated to new values. Therefore, be sure to temporarily register all items when you perform the calibration. When the data is registered, it is also recorded that user calibration has been performed.

Prepare separate measuring devices and equipment for calibration. For details on how to handle measuring devices and equipment, refer to the respective instruction manuals.

● Wiring the E5□C-B (Models with Push-In Plus Terminal Blocks)

When connecting two wires to one terminal to calibrate the E5□C-B, do so as given below.

• Using Stranded Wire

Use AWG24 to AWG20 (0.25 to 0.5 mm^2) stranded wires and connect two wires to the terminal.

• Using Twin Ferrules

Use AWG22 to AWG18 (0.5 to 0.75 mm^2) wires.
Attach the two wires to the twin ferrule first, and then connect the ferrule to the terminal.

Recommended Twin Ferrules

Manufacturer	Model number
Phoenix Contact	AL-TWIN2 × 0,5-8WH
	AL-TWIN2 × 0,75-8GY
Weidmuller	H0.5/14
	H0.75/14
Wago	FE-0.5-8W-WH
	FE-0.75-8W-GY

7-2 Parameter Structure

- To execute user calibration, enter the password "1201" at the Move to Calibration Level parameter in the Advanced Function Setting Level. The mode will be changed to the calibration mode, and Rdu will be displayed.
- The Move to Calibration Level parameter may not be displayed when the user is doing the calibration for the first time. If this happens, set the Initial Setting/Communications Protect parameter in the Protect Level to 0 before moving to the Advanced Function Setting Level.
- The calibration mode is ended by turning the power OFF.
- The parameter calibrations in the calibration mode are structured as shown below.

Display moves automatically according to input type.

| Resistance thermometer | Thermocouple or infrared temperature sensor | Current input | Voltage input |

30: 0 to 50 mV*1
*This range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

* This function is displayed only for a Digital Controller that has a transfer output. The E5CC-U, E5DC, E5DC-B, and E5GC do not have a transfer output.

When calibration has been performed after purchase, the user calibration information shown in the following illustration will be displayed when moving to the Calibration Level.
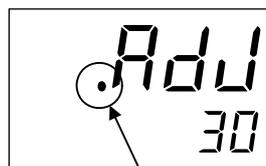

A dot is displayed.

7-3 Thermocouple Calibration

- Calibrate according to the type of thermocouple: thermocouple group 1 (input types 5, 7, 11, 12, 15, 19, and 20) and thermocouple group 2 (input types 6, 8, 9, 10, 13, 14, 16, 17, 18, 21, 22, 23, and 24).
- When calibrating, do not cover the bottom of the Digital Controller.

Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:
- Input Terminals (Negative and Positive)
E5CC: 5 and 6
E5CC-U: 2 and 1
E5EC/E5AC: 23 and 24
E5DC: 13 and 14
E5DC-B: 15 and 16
E5GC: 11 and 12
- Input Power Supply (C and D)
E5CC: 11 and 12
E5CC-U: 10 and 11
E5EC/E5AC: 1 and 2
E5DC: 1 and 2
E5DC-B: 1 and 2
E5GC: 1 and 2
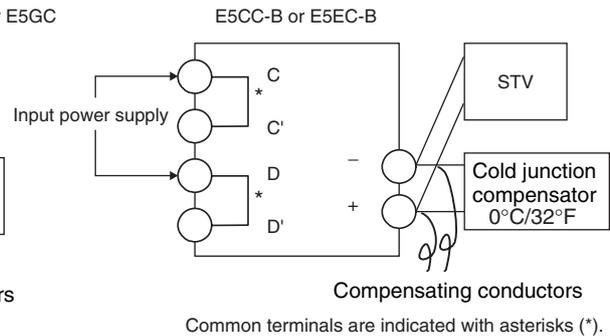

The terminal numbers are as follows:
- Input Terminals (Negative and Positive)
E5CC-B: 7 and 8
E5EC-B: 31 and 32
- Input Power Supply (C or C', and D or D')
E5CC-B: 13 or 14, and 15 or 16
E5EC-B: 1 or 2, and 3 or 4

- Set the cold junction compensator designed for compensation of internal thermocouples to 0°C. Make sure that internal thermocouples are disabled (i.e., that tips are open).
- In the above figure, STV indicates a standard DC current/voltage source.
- Use the compensating conductor designed for the selected thermocouple. When thermocouples R, S, E, B, W, or PLII or an infrared temperature sensor is used, the cold junction compensator and the compensating conductor can be substituted with the cold junction compensator and the compensating conductor for thermocouple K.

Additional Information

Connecting the Cold Junction Compensator

Correct process values cannot be obtained if you touch the contact ends of the compensating conductor during calibration of a thermocouple. Accordingly, short-circuit (enable) or open (disable) the tip of the thermocouple inside the cold junction compensator as shown in the figure below to create a contact or non-contact state for the cold junction compensator.
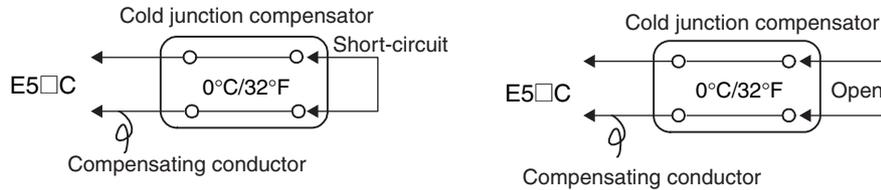

In this example, calibration is shown for a Digital Controller with thermocouple/infrared temperature sensor set as the input type.

1. Connect the power supply.

2. Connect a standard DC current/voltage source (STV), precision digital multimeter (DMM), and contact junction compensator (e.g., a zero controller as in the figure) to the thermocouple input terminals, as shown in the figure below. When you calibrate the E5□C-B or E5GC, connect STV and DMM through the terminal block.
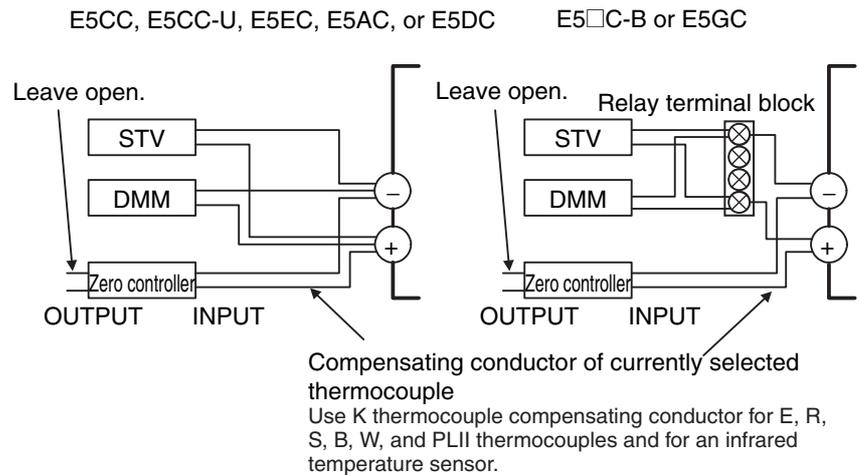

E5CC, E5CC-U, E5EC, E5AC, or E5DC   E5□C-B or E5GC

Compensating conductor of currently selected thermocouple
Use K thermocouple compensating conductor for E, R, S, B, W, and PLII thermocouples and for an infrared temperature sensor.

3. Turn the power ON.

4. Move to the Calibration Level.
    This starts the 30-minute aging timer. This timer provides an approximate timer for aging. After 30 minutes have elapsed, the No. 2 display changes to 0. You can advance to the next step in this procedure even if 0 is not displayed.

10. When the ⟳ Key is pressed, the status changes as shown to the left.
    The data to be temporarily registered is not displayed if it is not complete.
    Press the ⌃ Key. The No. 2 display changes to YES. Release the key and wait two seconds or press the ⟳ Key. This stores the temporarily registered calibration data to non-volatile memory. To cancel the saving of temporarily registered calibration data to non-volatile memory, press the ⟳ Key (while No is displayed in the No. 2 display) without pressing the ⌃ Key.

11. The calibration mode is ended by turning the power OFF.
    For Digital Controllers that have a transfer output, you can continue by calibrating the transfer output. For detailed setting methods, refer to *7-6 Calibrating the Transfer Output*.

7-4   Resistance Thermometer Calibration

In this example, calibration is shown for Digital Controller with a resistance thermometer set as the input type. Use connecting wires of the same thickness

1. Connect the power supply.

2. Connect a precision resistance box (called a "6-dial variable resistor" in this manual) to the resistance thermometer input terminals, as shown in the following diagram.

E5CC/E5CC-U/E5EC/E5AC/E5DC/E5DC-B/E5GC

The terminal numbers are as follows:
- Input Terminals (A/B/B)
E5CC: 4, 5, and 6
E5CC-U: 3, 2, and 1
E5EC/E5AC: 22, 23, and 24
E5DC: 12, 13, and 14

7. When the ☉ Key is pressed, the status changes as shown to the left.
   The data to be temporarily registered is not displayed if it is not complete.
   Press the ⌃ Key. The No. 2 display changes to YE5. Release the key and wait two seconds or press the ☉ Key. This stores the temporarily registered calibration data to non-volatile memory.
   To cancel the saving of temporarily registered calibration data to non-volatile memory, press the ☉ Key (while Nō is displayed in the No. 2 display) without pressing the ⌃ Key.

8. The calibration mode is ended by turning the power OFF.
   For Digital Controllers that have a transfer output, you can continue by calibrating the transfer output. For detailed setting methods, refer to *7-6 Calibrating the Transfer Output*.

● Calibrating a Voltage Input

In this example, calibration is shown for a Digital Controller with an analog input, with a voltage input set as the input type.

1. Connect the power supply.

2. Connect an STV and DMM to the voltage input terminals, as shown in the following diagram.

E5CC, E5CC-U, E5EC, E5AC, E5DC, E5DC-B, or E5GC   E5CC-B/E5EC-B

* Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:
• Input Terminals (Negative and Positive)
E5CC: 5 and 6
E5CC-U: 2 and 1

   - Input type 30: −6 mV

   Allow the count value on the No. 2 display to fully stabilize, then press the ⌄ Key to temporarily register the calibration settings.
   If this count value is outside of the specified range, the No. 2 display will flash and the count value will not be temporarily registered.

7. When the ⊃ Key is pressed, the status changes as shown to the left.
   The data to be temporarily registered is not displayed if it is not complete.
   Press the ⌃ Key. The No. 2 display changes to YES. Release the key and wait two seconds or press the ⊃ Key. This stores the temporarily registered calibration data to non-volatile memory.
   To cancel the saving of temporarily registered calibration data to non-volatile memory, press the ⊃ Key (while No is displayed in the No. 2 display) without pressing the ⌃ Key.

8. The calibration mode is ended by turning the power OFF.
   For Digital Controllers that have a transfer output, you can continue by calibrating the transfer output. For detailed setting methods, refer to *7-6 Calibrating the Transfer Output*.

7-6   Calibrating the Transfer Output

Transfer Output
Calibration   Note: This is displayed only
for Digital Controllers
that have a transfer
output.

For Digital Controllers that have a transfer output, the transfer output calibration display will be displayed after input calibration has been completed.

The E5CC-U, E5DC, E5DC-B, and E5GC do not have a transfer output.

Use the following procedure to calibrate the transfer output for 4 to 20 mA.

1. Connect a DMM to the transfer output terminals.
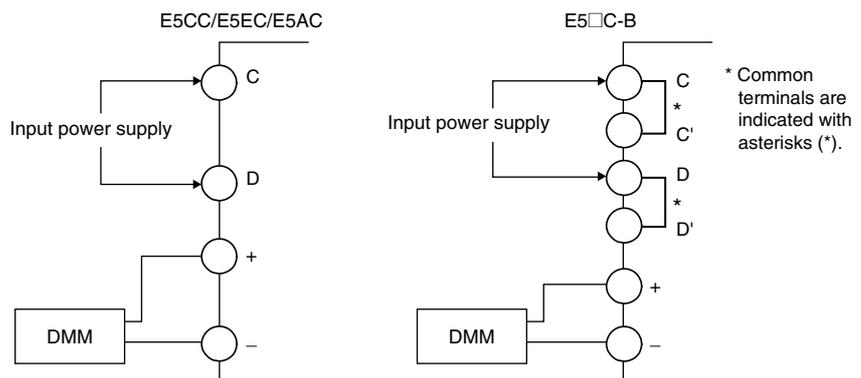

E5CC/E5EC/E5AC

* Common
terminals are
indicated with
asterisks (*).

The terminal numbers are as follows:
• Transfer Output Terminals (Positive and Negative)
E5CC: 17 and 18
E5EC/E5AC: 32 and 33
• Input Power Supply (C/D)
E5CC: 11 and 12
E5EC/E5AC: 1 and 2

The terminal numbers are as follows:
• Transfer Output Terminals (Positive and Negative)
E5CC-B: 23 and 24
E5EC-B: 43 and 44
• Input Power Supply (C or C', and D or D')
E5CC-B: 13 or 14, and 15 or 16
E5EC-B: 1 or 2, and 3 or 4

```
StA
    No
```

2. Press the ⟳ Key to display the parameter for the transfer output.

```
A20.t
    52AC
```

3. The calibration display for 20 mA will be displayed. Press the ⌃ or ⌄ Key until the DMM monitor value changes to 20 mA.
    Press the ⟳ Key. The calibration settings will be temporarily registered.

```
A4.t
    0037
```

4. The calibration display for 4 mA will be displayed. Press the ⌃ or ⌄ Key until the DMM monitor value changes to 4 mA.
    Press the ⟳ Key. The calibration settings will be temporarily registered.

```
StR.t
    No
```

5. To cancel saving the temporarily registered calibration data to non-volatile memory, press the ⊙ Key without pressing the ⊼ Key, i.e., while *No* is displayed in the No. 2 display.
Press the ⊼ Key. The No. 2 display changes to *YES*. Release the key and wait 2 seconds or press the ⊙ Key. This saves the temporarily registered calibration data in non-volatile memory.

6. The Calibration Mode is ended by turning OFF the power supply.

Use the following procedure to calibrate the transfer output for 1 to 5 V.
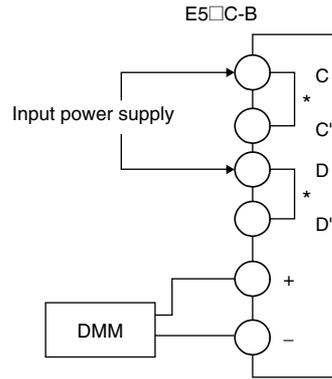

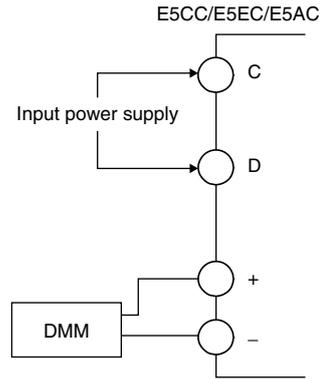

1. Connect a DMM to the transfer output terminals.

E5CC/E5EC/E5AC | E5□C-B

```
                    C                              C

Input power supply                Input power supply   C'
                    D                              D
                                                    *
                                                   D'

                    +                              +
   DMM                              DMM
                    –                              –
```

* Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:
• Transfer Output Terminals (Positive and Negative)
E5CC: 16 and 18
E5EC/E5AC: 31 and 33
• Input Power Supply (C/D)
E5CC: 11 and 12
E5EC/E5AC: 1 and 2

The terminal numbers are as follows:
• Transfer Output Terminals (Positive and Negative)
E5CC-B: 22 and 24
E5EC-B: 42 and 44
• Input Power Supply (C or C', and D or D')
E5CC-B: 13 or 14, and 15 or 16
E5EC-B: 1 or 2, and 3 or 4
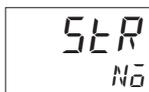

```
StR
  No
```

2. Press the ⊙ Key to display the parameter for the transfer output.

```
V  5.t
  5680
```

3. The calibration display for 5 V will be displayed. Press the ⊼ or ⊻ Key until the DMM monitor value changes to 5 V.
Press the ⊙ Key. The calibration settings will be temporarily registered.

```
V  1.t
  0001
```

4. The calibration display for 1 V will be displayed. Press the ⊼ or ⊻ Key until the DMM monitor value changes to 1 V.
Press the ⊙ Key. The calibration settings will be temporarily registered.

```
StR.t
    No
```

5. To cancel saving the temporarily registered calibration data to non-volatile memory, press the ⊙ Key without pressing the ⊼ Key, i.e., while *No* is displayed in the No. 2 display.
Press the ⊼ Key. The No. 2 display changes to *YES*. Release the key and wait 2 seconds or press the ⊙ Key. This saves the temporarily registered calibration data in non-volatile memory.

6. The Calibration Mode is ended by turning OFF the power supply.

7-7   Checking Indication Accuracy

- After calibrating the input, be sure to check the indication accuracy to make sure that the calibration has been executed correctly.
- Operate the E5□C in the process value/set point monitor mode.
- Check the indication accuracy at the following three values: upper limit, lower limit, and mid-point.
- To check the range of an infrared sensor, set the input type parameter to 6 (i.e., a K thermocouple) and input a voltage that is equivalent to the starting power of a K thermocouple.

● **Thermocouple or Infrared Temperature Sensor**
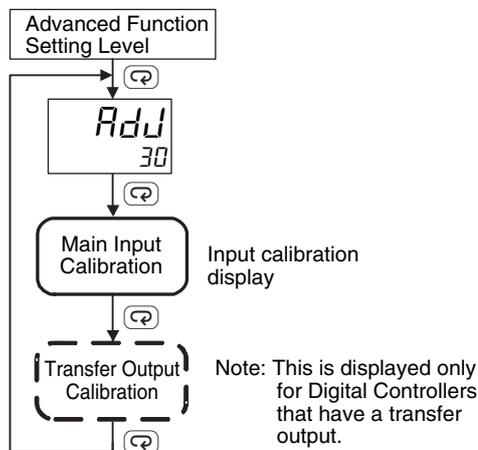

- Preparations
  The diagram below shows the required device connections. Make sure that the E5□C and cold junction compensator are connected by a compensating conductor for the thermocouple that is to be used during actual operation.

E5CC, E5CC-U, E5EC, E5AC, E5DC, E5DC-B, or E5GC

The terminal numbers are as follows:
- Input Terminals (Negative and Positive)
  E5CC: 5 and 6
  E5CC-U: 2 and 1
  E5EC/E5AC: 23 and 24
  E5DC: 13 and 14
  E5DC-B: 15 and 16
  E5GC: 11 and 12

- Input Power Supply (C/D)
  E5CC: 11 and 12
  E5CC-U: 10 and 11
  E5EC/E5AC: 1 and 2
  E5DC: 1 and 2
  E5DC-B: 1 and 2
  E5GC: 1 and 2

E5CC-B/E5EC-B

* Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:
- Input Terminals (Negative and Positive)
  E5CC-B: 7 and 8
  E5EC-B: 31 and 32

- Input Power Supply (C or C', and D or D')
  E5CC-B: 13 or 14, and 15 or 16
  E5EC-B: 1 or 2, and 3 or 4

- Operation
  Make sure that the cold junction compensator is at 0°C, and set the STV output to the voltage equivalent of the starting power of the check value.
  The cold junction compensator and compensation conductor are not required when an external cold junction compensation method is used.

● **Resistance Thermometer**

• Preparations

The diagram below shows the required device connections.

E5CC, E5CC-U, E5EC, E5AC, E5DC, E5DC-B, or E5GC

The terminal numbers are as follows:

• Input Terminals (A/B/B)
E5CC: 4, 5, and 6
E5CC-U: 3, 2, and 1
E5EC/E5AC: 22, 23, and 24
E5DC: 12, 13, and 14
E5DC-B: 11, 15, and 16
E5GC: 10, 11, and 12

• Input Power Supply (C/D)
E5CC: 11 and 12
E5CC-U: 10 and 11
E5EC/E5AC: 1 and 2
E5DC: 1 and 2
E5DC-B: 1 and 2
E5GC: 1 and 2

E5CC-B or E5EC-B
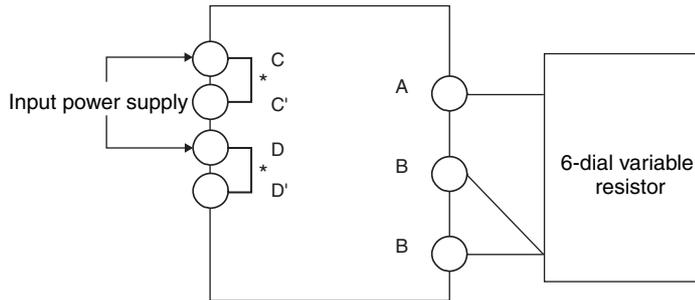

* Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:

• Input Terminals (A/B/B)
E5CC-B: 6, 7, and 8
E5EC-B: 30, 31, and 32

• Input Power Supply (C or C', and D or D')
E5CC-B: 13 or 14, and 15 or 16
E5EC-B: 1 or 2, and 3 or 4

• Operation

Set the 6-dial variable resistor to the resistance that is equivalent to the test value.

● Analog Input

• Preparations

The diagram below shows the required device connections.

(The connection terminals depend on the model and input type.)

Current Input

E5CC, E5CC-U, E5EC, E5AC, E5DC, E5DC-B, or E5GC

The terminal numbers are as follows:

• Input Terminals (Positive and Negative)

E5CC: 4 and 5
E5CC-U: 3 and 2
E5EC/E5AC: 22 and 23
E5DC: 12 and 13
E5DC-B: 11 and 15
E5GC: 10 and 11

• Input Power Supply (C/D)

E5CC: 11 and 12
E5CC-U: 10 and 11
E5EC/E5AC: 1 and 2
E5DC: 1 and 2
E5DC-B: 1 and 2
E5GC: 1 and 2

E5CC-B or E5EC-B
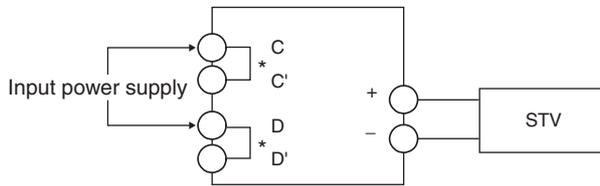

* Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:

• Input Terminals (Positive and Negative)

E5CC-B: 6 and 7
E5EC-B: 30 and 31

• Input Power Supply (C or C', and D or D')

E5CC-B: 13 or 14, and 15 or 16
E5EC-B: 1 or 2, and 3 or 4

Voltage Input

E5CC, E5CC-U, E5EC, E5AC, E5DC, E5DC-B, or E5GC

The terminal numbers are as follows:

• Input Terminals (Negative and Positive)

E5CC: 5 and 6
E5CC-U: 2 and 1
E5EC/E5AC: 23 and 24
E5DC: 13 and 14
E5DC-B: 15 and 16
E5GC: 11 and 12

• Input Power Supply (C/D)

E5CC: 11 and 12
E5CC-U: 10 and 11
E5EC/E5AC: 1 and 2
E5DC: 1 and 2
E5DC-B: 1 and 2
E5GC: 1 and 2

E5CC-B/E5EC-B

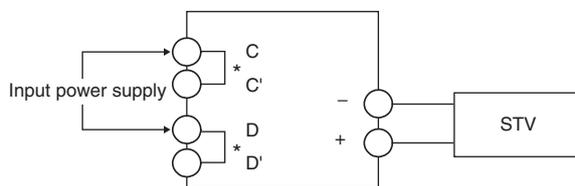

* Common terminals are indicated with asterisks (*).

The terminal numbers are as follows:

• Input Terminals (Negative and Positive)

E5CC-B: 7 and 8
E5EC-B: 31 and 32

• Input Power Supply (C or C', and D or D')

E5CC-B: 13 or 14, and 15 or 16
E5EC-B: 1 or 2, and 3 or 4

• Operation

Set the STV output to the voltage or current test value.

Appendices

A

A-1   Specifications

A-1-1   Ratings

Supply voltage			100 to 240 VAC, 50/60 Hz	24 VAC, 50/60 Hz/24 VDC
Operating voltage range			85% to 110% of rated supply voltage	
Power consumption	E5CC/E5CC-U/E5CC-B		Option number 000: 5.2 VA max. Other option numbers: 6.5 VA max.	Option number 000: 3.1 VA max./1.6 W max. Other option numbers: 4.1 VA max./2.3 W max.
	E5EC/E5EC-B		Option number 000: 6.6 VA max. Other option numbers: 8.3 VA max.	Option number 000: 4.1 VA max./2.3 W max. Other option numbers: 5.5 VA max./3.2 W max.
	E5AC		Option number 000: 7.0 VA max. Other option numbers: 9.0 VA max.	Option number 000: 4.2 VA max./2.4 W max. Other option numbers: 5.6 VA max./3.4 W max.
	E5DC/E5DC-B		4.9 VA max.	2.8 VA max./1.5 W max.
	E5GC		5.9 VA max.	3.2 VA max./1.8 W max.
Sensor input [1]			Thermocouple: K, J, T, E, L, U, N, R, S, B, W, PLII Platinum resistance thermometer: Pt100, JPt100 Infrared temperature sensor: 10 to 70°C, 60 to 120°C, 115 to 165°C, 140 to 260°C Current input [2]: 4 to 20 mA, 0 to 20 mA (Input impedance: 150 Ω max.) Voltage input [2]: 1 to 5 V, 0 to 5 V, 0 to 10 V, 0 to 50 mV[5] (Input impedance: 1 MΩ min.)	
Control output 1/2 [4]	Relay output	E5CC/E5CC-B/E5DC/E5DC-B	SPST-NO, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations Min. applicable load: 5 V, 10 mA[3] (reference values)	
		E5CC-U	SPDT, 250 VAC, 3 A (resistive load), electrical life: 100,000 operations Min. applicable load: 5 V, 10 mA (reference values)	
		E5EC/E5EC-B/E5AC	SPST-NO, 250 VAC, 5 A (resistive load), electrical life: 100,000 operations Min. applicable load: 5 V, 10 mA (reference values)	
		E5GC	SPST-NO, 250 VAC, 2 A (resistive load), electrical life: 100,000 operations Min. applicable load: 5 V, 10 mA (reference values)	
	Voltage output (for driving SSR)	E5CC/E5CC-U/E5CC-B/E5DC/E5DC-B/E5GC	Output voltage 12 VDC ±20% (PNP), max. load current 21 mA, with short-circuit protection circuit	

		E5EC/E5EC-B/E5AC	Control Output 1
			  Output voltage 12 VDC ±20% (PNP), max. load current 40 mA, with short-circuit protection
			  circuit
			  (21 mA if there are two control outputs)
			Control Output 2
			  12 VDC ±20% (PNP), max. load current 21 mA, with short-circuit protection circuit	

	Linear current output	E5CC/E5CC-U/E5CC-B/E5EC/E5EC-B/E5AC/E5AC-B/E5DC/E5DC-B/E5GC [3]	4 to 20 mA DC, 0 to 20 mA DC, Load: 500 Ω max. Resolution: Approx. 10,000	
Auxiliary output	Relay outputs	E5CC	2 or 3 auxiliary outputs (depends on model), SPST-NO, 250 VAC, model with 2 auxiliary outputs: 3 A (resistive load), model with 3 auxiliary outputs: 2 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference values)	
		E5CC-U	1 or 2 auxiliary outputs (depends on model), SPST-NO, 250 VAC, 3 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference values)	
		E5CC-B	2 auxiliary outputs SPST-NO, 250 VAC, 2 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference values)	
		E5EC/E5EC-B/E5AC	2 or 4 auxiliary outputs (depends on model), SPST-NO, 250 VAC, model with 2 auxiliary outputs: 3 A (resistive load), model with 4 auxiliary outputs: 2 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference values)	
		E5DC/E5DC-B	2 (depends on model) SPST-NO, 250 VAC, 2 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference values)	
		E5GC	1 or 2 auxiliary outputs (depends on model), SPST-NO, 250 VAC, 2 A (resistive load), Electrical life: 100,000 operations, Minimum applicable load: 10 mA at 5 V (reference values)	

Supply voltage	100 to 240 VAC, 50/60 Hz	24 VAC, 50/60 Hz/24 VDC
Control method	ON/OFF or 2-PID control (with autotuning)	
Setting method	Digital setting using front panel keys	
Indication method	11-segment digital displays and individual indicators	
Other functions	Depend on the model	
Ambient temperature	−10 to 55°C (with no condensation or icing), For 3-year warranty: Mounted individually at −10 to 50°C (with no condensation or icing)	
Ambient humidity	25% to 85%	
Storage temperature	−25 to 65°C (with no condensation or icing)	
Altitude	2,000 m max.	
Recommended fuse	T2A, 250 VAC, time lag, low shut-off capacity	
Installation environment	Overvoltage Category II, Pollution Class 2 (EN/IEC/UL 61010-1)	

*1   For input setting ranges, refer to *A-7 Sensor Input Setting Range, Indication Range, Control Range*.

*2   When connecting the ES2-HB/THB, connect it 1:1.

*3   With the E5CC, you cannot select a relay output or linear current output for control output 2.

*4   The E5CC-U, E5CC-B, E5EC-B, E5DC, E5DC-B, and E5GC do not have control output 2.

*5   The 0 to 50 mV range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

● HB and HS Alarms

(E5□C Models with HB and HS Alarms)

Max. heater current	50 A AC
Input current readout accuracy	±5% FS ±1 digit max.
Heater burnout alarm setting range	0.1 to 49.9 A (0.1 A units) 0.0 A: Heater burnout alarm output turns OFF. 50.0 A: Heater burnout alarm output turns ON. Min. detection ON time [1]: 30 ms for a control period of 0.1 s or 0.2 s 100 ms for a control period of 0.5 s or 1 to 99 s
Heater short alarm setting range	0.1 to 49.9 A (0.1 A units) 0.0 A: Heater short alarm output turns ON. 50.0 A: Heater short alarm output turns OFF. Min. detection OFF time [2]: 35 ms for a control period of 0.1 s or 0.2 s 100 ms for a control period of 0.5 s or 1 to 99 s

*1   HB alarms are not detected and the heater power is not measured if the ON time for the control output for heating is 100 ms or less (30 ms or less if the control period is 0.1 or 0.2 s).

*2   HS alarms are not detected and the leakage power is not measured if the ON time for the control output for heating is 100 ms or less (35 ms or less if the control period is 0.1 or 0.2 s).

A-1-2   Characteristics

Indication accuracy (when mounted individually, ambient temperature of 23°C)	Thermocouple [1]	E5CC, E5CC-B, E5EC, E5EC-B, E5AC, E5DC, E5DC-B, and E5GC: (±0.3% of indication value or ±1°C, whichever is greater) ±1 digit max. E5CC-U: (±1% of PV or ±2°C, whichever is greater) ±1 digit max.
	Resistance thermometer	(±0.2% of indication value or ±0.8°C, whichever is greater) ±1 digit max.
	Analog input	±0.2% FS ±1 digit max.
	CT input	±5% FS ±1 digit max.
	Potentiometer input	±5% FS ±1 digit max.
Temperature variation influence [2] Voltage variation influence [2] Electromagnetic interference influence (according to EN 61326-1)	Thermocouple	Thermocouple (R, S, B, W, PLII) (±1% of indication value or ±10°C, whichever is greater) ±1 digit max. Other thermocouples: (±1% of indication value or ±4°C, whichever is greater) ±1 digit max. *K thermocouple at −100°C max: ±10°C max.
	Resistance thermometer	(±1% of indication value or ±2°C, whichever is greater) ±1 digit max.
	Analog input	±1% FS ±1 digit max.
	CT input	±5% FS ±1 digit max.
	Remote SP input	±1% FS ±1 digit max.
Installation influence (E5DC/E5DC-B only)	Thermocouple	R, S, B, W, or PLII thermocouple: (±1% of indication value or ±10°C, whichever is greater) ±1 digit max. Other thermocouple: (±1% of indication value or ±4°C, whichever is greater) ±1 digit max. * K thermocouple at −100°C max: ±10°C max.
Hysteresis	Temperature input	0.1 to 999.9°C or °F (in units of 0.1°C or °F)
	Analog input	0.01% to 99.99% FS (in units of 0.01% FS)
Proportional band (P)	Temperature input	0.1 to 999.9°C or °F (in units of 0.1°C or °F)
	Analog input	0.1% to 999.9% FS (in units of 0.1% FS)
Integral time (I) [3]		Standard, heating/cooling, or close position-proportional control: 0 to 9,999 s (in 1-s increments) or 0.0 to 999.9 s (in 0.1-s increments) Floating position-proportional control: 1 to 9,999 s (in 1-s increments) or 0.1 to 999.9 s (in 0.1-s increments)
Derivative time (D) [3]		0 to 9,999 s (in units of 1 s) 0.0 to 999.9 s (in units of 0.1 s)
Control Period		0.1, 0.2, 0.5, or 1 to 99 s (in units of 1 s)
Manual reset value		0.0% to 100.0% (in units of 0.1%)
Alarm setting range		−1,999 to 9,999 (except for MV alarm) Temperature input: The decimal point is automatically set when the sensor is selected. Analog input: The decimal point depends on the Decimal Point parameter setting. −199.9 to 999.9 (MV alarm)
Sampling cycle		50 ms
Insulation resistance		20 MΩ min. (at 500 VDC)
Dielectric strength		100 to 240 VAC: 3,000 VAC, 50/60 Hz for 1 min between terminals of different charge 24 VAC/DC: 3,000 VAC,* 50/60 Hz for 1 min between terminals of different charge *E5GC only: 2,300 VAC
Malfunction vibration		10 to 55 Hz, 20 m/s^2 for 10 min each in X, Y and Z directions
Vibration resistance		10 to 55 Hz, 20 m/s^2 for 2 hr each in X, Y, and Z directions
Malfunction shock		100 m/s^2, 3 times each in X, Y, and Z directions

Shock resistance		300 m/s², 3 times each in X, Y, and Z directions		
Weight	E5CC	Approx. 120 g	Adapter: Approx. 10 g	Terminal cover: Approx. 0.5 g each
	E5CC-B	Approx. 120 g	Adapter: Approx. 10 g	---
	E5CC-U	Approx. 100 g	Adapter: Approx. 10 g	---
	E5EC	Approx. 210 g	Adapter: Approx. 4 g × 2	Terminal Cover: Approx. 1 g each
	E5EC-B	Approx. 210 g	Adapter: Approx. 4 g × 2	---
	E5AC	Approx. 250 g	Adapter: Approx. 4 g × 2	Terminal Cover: Approx. 1 g each
	E5DC	Main Unit: Approx. 80 g, Terminal Unit: Approx. 40 g		
	E5DC-B	Main Unit: Approx. 80 g, Terminal Unit: Approx. 40 g		
	E5GC	Approx. 80 g	Adapters: Approx. 4 g × 2	
Degree of protection	E5CC/E5CC-B/ E5EC/E5EC-B/ E5AC/E5GC	Front panel: IP66, rear case: IP20, terminals: IP00		
	E5CC-U	Front panel: IP50, rear case: IP20, terminals: IP00		
	E5DC/E5DC-B	Main Unit: IP20, Terminal Unit: IP00		
Memory protection		Non-volatile memory (number of writes: 1,000,000)		

*1   The indication accuracy of K, T, and N thermocouples at a temperature of −100°C or less is ±2°C ±1 digit maximum.
    The indication accuracy of U and L thermocouples is ±2°C ±1 digit maximum.
    The indication accuracy of B thermocouples at a temperature of 400°C or less is not specified.
    The indication accuracy of B thermocouples at a temperature of 400 to 800°C is ±3°C maximum.
    The indication accuracy of R and S thermocouples at a temperature of 200°C or less is ±3°C ±1 digit maximum.
    The indication accuracy of W thermocouples is (±0.3% of PV or ±3°C, whichever is greater) ±1 digit maximum.
    The indication accuracy of PLII thermocouples is (±0.3% of PV or ±2°C, whichever is greater) ±1 digit maximum.
*2   Ambient temperature: −10°C to 23°C to 55°C
    Voltage range: −15 to +10% of rated voltage
*3   The unit is determined by the setting of the Integral/Derivative Time Unit parameter.

A-1-3   Rating and Characteristics of Options

Event inputs	Contact Input ON: 1 kΩ max., OFF: 100 kΩ min.
	Non-contact Input ON: Residual voltage 1.5 V max.; OFF: Leakage current 0.1 mA max.
	Current flow: Approx. 7 mA per contact.
Communications	Transmission path: RS-485: Multidrop
	Communications method: RS-485 (2-wire, half duplex)
	Synchronization: Start-stop
	Protocol: CompoWay/F or Modbus
	Baud rate: 9.6, 19.2, 38.4, or 57.6 kbps
Transfer output	Current output: 4 to 20 mA DC, Load: 500 Ω max., Resolution: 10,000, Accuracy: ±0.3% FS
	Linear voltage output: 1 to 5 VDC, Load: 1 kΩ min., Resolution: 10,000, Accuracy: ±0.3% FS
Remote SP input	Current input: 4 to 20 or 0 to 20 mA DC with input impedance of 150 Ω max.
	Voltage input: 1 to 5, 0 to 5, or 0 to 10 VDC with input impedance of 1 MΩ min.

A-1-4   Waterproof Packing

If the Waterproof Packing is lost or damage, order one of the following models.

Y92S-P12 (for DIN 48 × 24)	Y92S-P8 (for DIN 48 × 48)

Y92S-P9 (for DIN 48 × 96)	Y92S-P10 (for DIN 96 × 96)
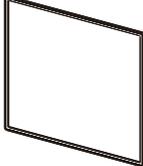

A-1-5   Unit Labels

Order the Unit Labels separately to use them with the E5DC or E5DC-B.

Y92S-L2

A-1-6   Setup Tool Port Cover for Front Panel

A Y92F-P7 Setup Tool Port Cover for the front panel is included with the E5EC, E5EC-B, or E5AC. Order this Port Cover separately if the Port Cover on the front-panel Setup Tool port is lost or damaged. The Waterproof Packing must be periodically replaced because it may deteriorate, shrink, or harden depending on the operating environment.

Y92S-P7

Use the following procedure to replace the Setup Tool Port Cover for the front panel.

● Replacement Procedure

1	**Open the Setup Tool Port Cover on the front panel.**	
2	**Pull gently on the Setup Tool Port Cover to remove it from the Digital Controller.**	
3	**Insert the stopper on the Setup Tool Port Cover into the hole at the bottom of the port.**	Insertion hole
4	**Make sure that the Setup Tool Port Cover is closed.**	

A-1-7   Connector Cover of the Terminal Unit (models with Push-in Plus Terminal Blocks)

The Terminal Units of the E5DC-B have male and female connector covers (E53-COV26), respectively. Order the connector covers separately, if lost or damaged.

E53-COV26	
Male connector cover	**Female connector cover**
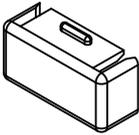

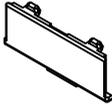

The attachment and removal procedure of the connector covers is described below.

Removing the Connector Covers

1   **Insert a flat-blade screwdriver in the notched part of both the male and female connector covers, and remove the connector covers.**

Male connector cover

Notched part
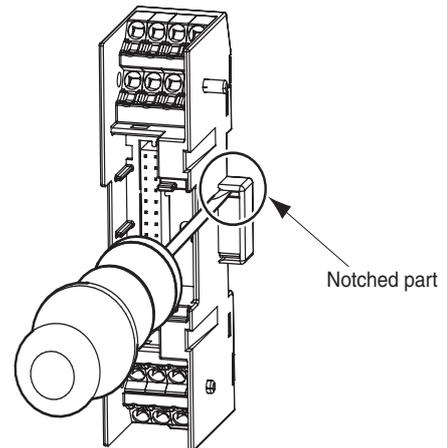

Female connector cover
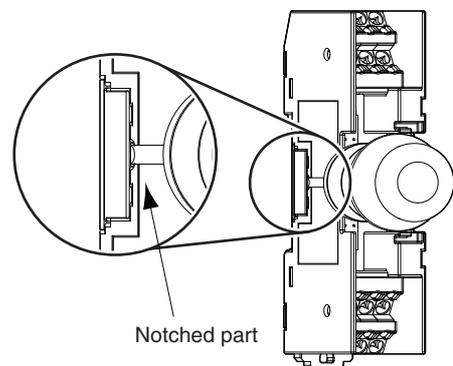

Notched part

Precautions for Correct Use

The product may get damaged.
Take care not to insert the flat-blade screwdriver too much inside the notched part of the female connector cover.

Attaching the Connector Covers

● **For a male connector cover**

1   Attach the connector cover until the claws on the connector cover fit into the connector with a click sound.
A male connector does not have an up/down direction.
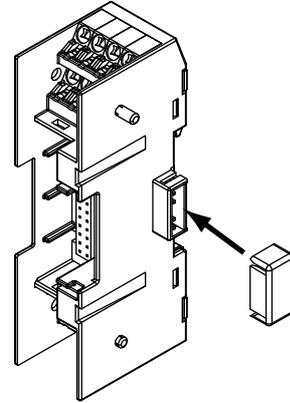

● **For a female connector cover**

1   Insert the projection on the female connector cover into the groove on the Terminal Unit.

Projection

groove
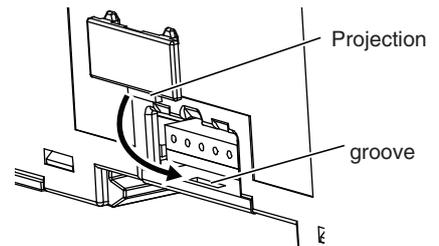

2   Attach the female connector cover until the claws on the connector cover fit into the notched part of the Terminal Unit with a click sound.

Notched part

A-4   Error Displays

When an error occurs, the error contents are shown on the No. 1 or the No. 2 display.
This section describes how to check error codes on the display, and the actions to be taken to remedy the problems.

$5.ERR$ **Input Error**

● **Meaning**

The input value has exceeded the control range. *
The input type setting is not correct.
The sensor is disconnected or shorted.
The sensor wiring is not correct.
The sensor is not wired.

* Control Range

Resistance thermometer, thermocouple input:	Temperature setting lower limit −20°C to temperature setting upper limit +20°C (Temperature setting lower limit −40°F to temperature setting upper limit +40°F)
ES1B input:	Same as input indication range
Analog input:	−5% to +105% of scaling range

● **Action**

Check the wiring of inputs for miswiring, disconnections, and short-circuits and check the input type.
If no abnormality is found in the wiring and input type, turn the power OFF then back ON again.
If the display remains the same, the Digital Controller must be replaced. If the display is restored, then the probable cause is electrical noise affecting the control system. Check for electrical noise.
Note: With resistance thermometer input, a break in the A, B, or B line is regarded as a disconnection.

● **Operation**

After an error occurs, the error is displayed and the alarm outputs function as if the upper limit has been exceeded.
It will also operate as if transfer output exceeded the upper limit. If an input error is assigned to a control output or auxiliary output, the output will turn ON when the input error occurs. The error message will appear in the display for the PV.
Note: The heating and cooling control outputs will turn OFF. When the manual MV, MV at stop, or MV at error is set, the control output is determined by the set value.

`⊏⊏⊏⊏`
`⊐⊐⊐⊐`   **Display Range Exceeded**

● **Meaning**

Though this is not an error, it is displayed if the process value exceeds the display range when the control range is larger than the display range.

The display ranges are shown below (with decimal points omitted).

• When less than −1,999: `⊏⊏⊏⊏`
• When more than 9,999: `⊐⊐⊐⊐`

● **Operation**

Control continues, allowing normal operation. The value will appear in the display for the PV.

Resistance thermometer input (Except for models with a
setting range of −199.9 to 500.0°C)
Thermocouple input (Except for models with a setting range of
−199.9 to 400.0°C)
ES1B

• When display range ≥ control range

— Control range —

S.ERR display	Numeric display	S.ERR display
	Input indication range	

−1999 ← Display range* → 9999
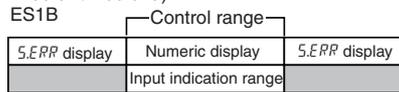

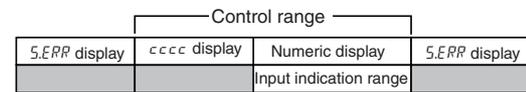

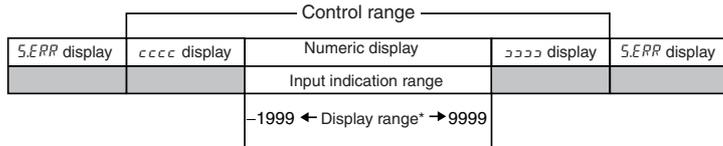

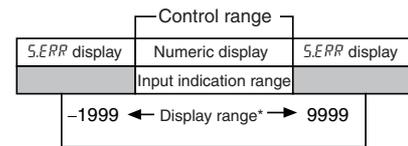

*The display range is shown in numbers with decimal points omitted.

`E⊐⊐⊐`   **AD Converter Error**

● **Meaning**

There is an error in internal circuits.

● **Action**

First, turn the power OFF then back ON again. If the display remains the same, the Digital Controller must be repaired. If the display is restored, then the probable cause is electrical noise affecting the control system. Check for electrical noise.

● **Operation**

The control, auxiliary, and transfer outputs turn OFF. (A linear current output will be approx. 0 mA. A linear voltage output will be approx. 0 V.)

$E \, I \, I \, I$ **Memory Error**

● **Meaning**

Internal memory operation is in error.

● **Action**

First, turn the power OFF then back ON again. If the display remains the same, the Digital Controller must be repaired. If the display is restored, then the probable cause is electrical noise affecting the control system. Check for electrical noise.

● **Operation**

The control, auxiliary, and transfer outputs turn OFF. (A linear current output will be approx. 0 mA. A linear voltage output will be approx. 0 V.)

$FFFF$ **Current Value Exceeds**

● **Meaning**

This error is displayed when the heater current value exceeds 55.0 A.

● **Operation**

Control continues, allowing normal operation. An error message is displayed when the following items are displayed.
Heater current 1 value monitor
Heater current 2 value monitor
Leakage current 1 monitor
Leakage current 2 monitor

$Ct \, I$
$Ct2$ **HB Alarm**
$LCR \, I$ **HS Alarm**
$LCR2$

● **Meaning**

If there is an HB or HS alarm, the relevant parameter will flash on the No. 1 display.

● **Operation**

The relevant Heater Current 1 Value Monitor, Heater Current 2 Value Monitor, Leakage Current 1 Monitor, or Leakage Current 2 Monitor parameters in the Operation or Adjustment Level will flash on the No. 1 display. However, control continues and operation is normal.

A-4 Error Displays

A

$-\ -\ -\ -$ **Potentiometer Input Error (Position-proportional Models Only)**

● **Meaning**

"----" will be displayed for the Valve Opening Monitor parameter if any of the following error occurs.

• Motor calibration has not been performed.
• The wiring of the potentiometer is incorrect or broken.
• The potentiometer input value is incorrect (e.g., the input is out of range or the potentiometer has failed).

● **Action**

Check for the above errors.

● **Operation**

Close control: The control output is OFF or the value that is set for the MV at PV Error parameter is output.

Floating control: Operation will be normal.

A-5   Troubleshooting

A-5-1   Frequently Asked Questions

Under Troubleshooting, the method of checking for problems that are frequently encountered by the customers has been described below. If a similar event occurs, please check the contents below.

For events to which this section may not be applicable, refer to the list *A-5-2 Checking Problems* on page A-22.

• The error between the indicated temperature and the actual temperature is large. • 5.ERR is displayed. • The temperature rise (or temperature drop) speed is either slow or fast.

→

Make sure the correct input type has been set. [Refer to *Checking the Input Type.*]

Make sure the PV input correction value is not incorrect. [Refer to *Checking the PV input correction value.*]

Make sure the PV input slope correction coefficient is not incorrect. [Refer to *Checking the PV input slope correction coefficient.*]

● Checking the Input Type

*   If the setting value is to be changed for the purpose of checking, OMRON recommends that you make a note of the setting value before change.

1 **Turn ON the power.**	Operation Display If an input error occurs, 5.ERR flashes on the display.
2 **Press the ⊖ (Level) Key for at least 3 seconds.** **When you are finished, press the ⊖ (Level) Key for at least 1 second to return to the operation display.**	Press the ⊖ (Level) Key for at least 3 seconds. ←Flashes three times Initial Setting Level ←ĪN-Ł (IN-T): Indicates the Input Type parameter. ←The default setting is 5: (5: K thermocouple at –200 to 1,300°C). If the input and sensor type number do not match, change the number using the ⊼⊽ (Up/down) keys. Refer to page A-43 for the list of input types.

● Checking the PV Input Shift Value

*   If the setting value is to be changed for the purpose of checking, OMRON recommends that you make a note of the setting value before change.

1 **Turn ON the power.**	Operation Display If an input error occurs, 5.ERR flashes on the display.

2 **Press the ▭ (Level) key for less than one second.**
Move to the adjustment level.

Press the ▭ (Level) key for less than one second.

Adjustment Level

←*L.AdJ* **(L.AdJ) will be displayed to indicate that the Adjustment Level has been entered.**

3 **Change the parameter that is displayed with the ▭ (Mode) Key.**
After completion, press the ▭ (Level) key for less than one second to return to the Operation screen.

Press the ▭ (Level) Key for at least 3 seconds.

←**Flashes three times**

Initial Setting Level

← Move to the screen on which *InS* (INS) is displayed.
The display in the lower row is the PV input correction value.
The default value is 0.0 (0 in the case of analog input).
Make sure an incorrect value is not set.
Refer to page 5-3, 6-27 for details.

Additional Information

Meaning of the PV input correction value *InS* (INS):
The ins amount is added to the input value from the sensor.

Example) *InS* = 30.0; When the input value is 100.0°C, the indicated temperature will be 130.0°C.

InS = -20.0; When the input value is 100.0°C, the indicated temperature will be 80.0°C.

● Checking the PV Input Slope Correction Coefficient

*   If the setting value is to be changed for the purpose of checking, OMRON recommends that you make a note of the setting value before change.

1 **Turn ON the power.**

Operation Display

If an input error occurs,
S.ERR **flashes on the display.**

2 **Press the ▭ (Level) key for less than one second.**
Move to the Adjustment Level.

Press the ▭ (Level) key for less than one second.

Adjustment Level

←*L.AdJ* **(L.AdJ) will be displayed to indicate that the Adjustment Level has been entered.**

3 **Change the parameter that is displayed with the ▢ (Mode) Key.**
After completion, press the ▢ (Level) key for less than one second to return to the Operation screen.

Press the ▢ (Mode) key several times to display *ᴌnRᴌ*. (The number of times the key is to be pressed varies according to the specifications.)

L.Adj
0

Initial Setting Level

ᴌnRᴌ
1.000

← Move to the screen on which *ᴌnRᴌ* (INRT) is displayed.
The display in the lower row is the PV input slope correction coefficient.
The default is 1.000.
Make sure an incorrect value is not set.
Refer to page 5-3, 6-27 for details.
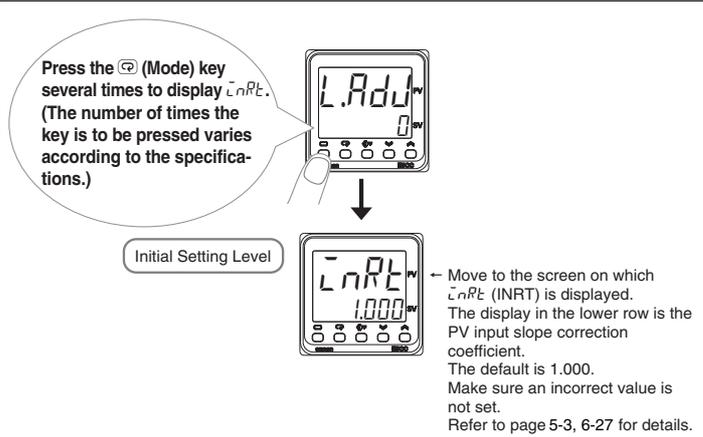

📝 **Additional Information**

Meaning of the PV input shift value *ᴌNRᴌ* (INRT):
Specifies the amount of change in the indicated value with respect to the increase/decrease in the sensor input value.
ᴌNRᴌ is calculated as Amount of change in indicated value / Amount of change in input value, and its default value is 1.000.

Example) *ᴌNRᴌ* = 2.000; When the amount of change in the input value is +100ºC, the amount of change in the indicated value will be +200ºC.

ᴌNRᴌ = 0.200; When the amount of change in the input value is +100ºC, the amount of change in the indicated value will be +20ºC.

A-5 Troubleshooting

A

A-5-1 Frequently Asked Questions

A-5-2   Checking Problems

If the Digital Controller is not operating normally, check the following points before requesting repairs. If the problem persists, contact your OMRON representative for details on returning the product.

Timing	Status	Meaning	Countermeasures	Page
Turning ON the power for the first time	The TUNE indicator will flash.	ST (self-tuning) is in progress (default setting: ON).	This is not a product fault. The TUNE indicator flashes during self-tuning.	4-27
	Temperature error is large. Input error (S.Err display)	Input type mismatch	Check the sensor type and reset the input type correctly.	4-12
		Thermometer is not installed properly.	Check the thermometer installation location and polarity and install correctly.	2-25, 2-41
	Communications are not possible.	Non-recommended adapter is being used.	Make sure that the connected device is not faulty.	*1
During operation	Overshooting Undershooting Hunting	ON/OFF control is enabled (default: ON/OFF control selected).	Select PID control and execute either ST (self-tuning) or AT (auto-tuning). When using self-tuning, turn ON the power supply to the Digital Controller and load (heater, etc.) at the same time, or turn ON the load power supply first. Accurate self-tuning and optimum control will not be possible if the power supply to the load is turned ON after turning ON the power supply to the Digital Controller.	4-24
		Control period is longer compared with the speed of rise and fall in temperature.	Shorten the control period. A shorter control period improves control performance, but a cycle of 20 ms minimum is recommended in consideration of the service life of the relays.	4-15
		Unsuitable PID constant	Set appropriate PID constants using either of the following methods. • Execute AT (autotuning). • Set PID constants individually using manual settings.	4-24
		HS alarm operation fault	Use breeder resistance if the problem is due to leakage current. Also investigate the errors detected by the HS alarm function.	4-42
	Temperature is not rising	Specified operation is unsuitable for required control (default: Reverse operation).	Select either forward or reverse operation depending on the required control. Reverse operation is used for heating operations.	4-15
		Heater is burnt out or deteriorated.	Check whether heater burnout or deterioration have occurred. Also investigate the errors detected by the heater burnout alarm.	4-40
		Insufficient heater capacity	Check whether the heater's heating capacity is sufficient.	---
		Cooling system in operation.	Check whether a cooling system is operating.	---
		Peripheral devices have heat prevention device operating.	Set the heating prevention temperature setting to a value higher than the set temperature of the Digital Controller.	---
	The AT Execute/Cancel parameter (*Rt*) is not displayed.	ON/OFF control is enabled.	Set the PID ON/OFF parameter to PID.	6-45
		The Controller is stopped.	Set the RUN/STOP parameter to RUN.	6-13
	The SP Ramp Set Value parameter (*SPRt*) is not displayed.	ST is enabled	Set the ST parameter to OFF.	6-33
	The Remote SP Enable parameter (*RSPU*) is not displayed.	ST is enabled	Set the ST parameter to OFF.	6-85
	The Alarm 1 Type parameter (*RLt 1*) is not displayed.	The Auxiliary Output 1 Assignment parameter is set to a heater alarm for a Controller with heater burnout detection.	Set the Auxiliary Output 1 Assignment parameter to Alarm 1. The default setting is for a heater alarm (HA).	6-83

*1   Also refer to the *E5□C Digital Controllers Communications Manual* (Cat. No. H175) for details.

Timing	Status	Meaning	Countermeasures	Page
During operation (continued)	Output will not turn ON	Set to STOP (default: RUN)	Set the RUN/STOP mode to RUN. If STOP is lit on the display, control is stopped.	5-12
		Specified operation is unsuitable for required control (default: Reverse operation).	Select either forward or reverse operation depending on the required control. Reverse operation is used for heating operations.	4-15
		A high hysteresis is set for ON/OFF operation (default: 1.0°C)	Set a suitable value for the hysteresis.	4-21
		The specified power is not being supplied from the terminals.	The output will not turn ON while the Digital Controller is being operated with power supplied through the USB-Serial Conversion Cable. Supply the specified power from the terminals.	---
	Digital Controller will not operate	Set to STOP (default: RUN)	Set the RUN/STOP mode to RUN. If STOP is lit on the display, control is stopped.	5-12
	Temperature error is large Input error (S.err display)	Thermometer has burnt out or short-circuited.	Check whether the thermometer has burnt out or short-circuited.	---
		Thermometer lead wires and power lines are in the same conduit, causing noise from the power lines (generally, display values will be unstable).	Wire the lead wires and power lines in separate conduits, or wire them using a more direct path.	---
		Connection between the Digital Controller and thermocouple is using copper wires.	Connect the thermocouple's lead wires directly, or connect compensating conductors that are suitable for the thermocouple.	---
		Installation location of thermometer is unsuitable.	Make sure that the location that is being measured with the temperature sensor is suitable.	---
		Input shift is not set correctly (default: 0°C)	Set a suitable input shift. If input shift is not required, set the input shift value to 0.0.	5-3
	Keys will not operate	Setting change protect is ON.	Turn OFF setting change protect.	5-19
	Cannot shift levels	Operations limited due to protection.	Set the operation/adjustment protect, initial setting/communications protect, and setting change protect values as required.	5-19
After long service life	Control is unstable	Terminal screws may be loose.	Retighten terminal screws to a torque of 0.43 to 0.58 N·m.[2]	2-55
		The internal components have reached the end of their service life.	The Digital Controller's internal electrolytic capacitor depends on the ambient temperature, and load rate. The structural life depends on the ambient environment (shock, vibration). The life expectancy of the output relays varies greatly with the switching capacity and other switching conditions. Always use the output relays within their rated load and electrical life expectancy. If an output relay is used beyond its life expectancy, its contacts may become welded or burned. Replace the Digital Controller and all other Digital Controllers purchased in the same time period.	---

*2   The specified torque is 0.5 N·m for the E5CC-U.

Symptom: Cannot Communicate or a Communications Error Occurs

Meaning	Countermeasures
The communications wiring is not correct.	Correct the wiring. When connecting to a third-party device and terminal name is different, connect terminals with same polarity.
The communications line has become disconnected.	Connect the communications line securely and tighten the screws.
The communications cable is broken.	Replace the cable.
The communications cable is too long.	The total cable length for RS-485 is 500 m max.
The wrong communications cable has been used.	Use shielded twisted-pair cable for the communications cable. For detailed wire specifications, refer to *2-2-9 Precautions when Wiring*.
More than the specified number of communications devices are connected to the same communications path.	When 1:N communications are used, a maximum of 32 nodes may be connected, including the host node.
An end node has not been set at each end of the communications line.	Set or connect terminating resistance at each end of the line. If the E5□C is the end node, 120-Ω (1/2-W) terminating resistance is used. Be sure that the combined resistance with the host device is 54 Ω minimum.
The specified power supply voltage is not being supplied to the Digital Controller.	Supply the specified power supply voltage.
The specified power supply voltage is not being supplied to an Interface Converter (such as the K3SC).	Supply the specified power supply voltage.
The same baud rate and communications method are not being used by all of the Digital Controllers, host devices, and other devices on the same communications line.	Set the same values for the baud rate, protocol, data length, stop bits, and parity on all nodes.
The unit number specified in the command frame is different from the unit number set by the Digital Controller.	Use the same unit number.
The same unit number as the Digital Controller is being used for another node on the same communications line.	Set each unit number for only one node.
There is a mistake in programming the host device.	Use a line monitor to check the commands. Check operation using a sample program.
The host device is detecting the absence of a response as an error before it receives the response from the Digital Controller.	Shorten the send data wait time in the Digital Controller or increase the response wait time in the host device.
The host device is detecting the absence of a response as an error after broadcasting a command.	The Digital Controller does not return responses for broadcast commands.
The host device sent another command before receiving a response from the Digital Controller.	The response must always be read after sending a command (except for broadcast commands).
The host device sent the next command too soon after receiving a response from the Digital Controller.	After receiving a response, wait at least 2 ms before sending the next command.
The communications line became unstable when Digital Controller power was turned ON or interrupted, and the host device read the unstable status as data.	Initialize the reception buffer in the host device before sending the first command and after turning OFF the power to the Digital Controller.
The communications data was corrupted from noise from the environment.	Try using a slower baud rate. Separate the communications cable from the source of noise. Use a shielded, twisted-pair cable for the communications cable. Use as short a communications cable as possible, and do not lay or loop extra cable. To prevent inductive noise, do not run the communications cable parallel to a power line. If noise countermeasures are difficult to implement, use an Optical Interface.

*   Also refer to the *E5□C Digital Controllers Communications Manual* (Cat. No. H175) for details on errors.

A-6   Parameter Operation Lists

A-6-1   Operation Level

Parameters	Characters	Setting (monitor) value	Display	Default	Unit
Process Value		Temperature: According to indication range for each sensor. Analog: Scaling lower limit −5% FS to Scaling upper limit +5% FS			EU

*1   This range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

*2   The remote SP will be output while the SP Mode parameter is set to the Remote SP Mode.

*3

Transfer output type	Setting (monitor) range	Default[*3.1] (transfer output upper/lower limits)	Unit
Set Point	SP lower limit to SP upper limit	SP upper limit/lower limit	EU
Set Point During SP Ramp	SP lower limit to SP upper limit	SP upper limit/lower limit	EU
PV	Temperature input: Input setting range lower limit to Input setting range upper limit	Input setting range upper/lower limit	EU
	Analog input: Scaling lower limit to Scaling upper limit	Scaling upper/lower limit	
MV (Heating)	Standard: −5.0 to 105.0 Heating/cooling: 0.0 to 105.0	100.0/0.0	%
MV (Cooling)	0.0 to 105.0	100.0/0.0	%
Valve opening	−10.0 to 110.0	100.0/0.0	%

*3.1   Initialized when the transfer output type is changed.
Initialized if the input type, temperature unit, scaling upper/lower limit, or SP upper/lower limit is changed when the transfer output type is SP, ramp SP, or PV.
(When initialized by the initializing settings, it is initialized to 100.0/0.0.)

*4

Setting of the simple transfer output type	Setting (monitor) range	Default[*4.1] (simple transfer output upper/lower limits)	Unit
Simple transfer SP	SP lower limit to SP upper limit	SP upper limit/lower limit	EU
Simple transfer ramp SP	SP lower limit to SP upper limit	SP upper limit/lower limit	EU
Simple transfer PV	Temperature input: Input setting range lower limit to Input setting range upper limit	Input setting range upper/lower limit	EU
	Analog input: Scaling lower limit to Scaling upper limit	Scaling upper/lower limit	
Simple transfer MV (heating)	Standard: −5.0 to 105.0 Heating/cooling: 0.0 to 105.0	100.0/0.0	%
Simple transfer MV (cooling)	0.0 to 105.0	100.0/0.0	%

*4.1   Initialized if the control output 1 type is changed.
Initialized if the input type, temperature unit, scaling upper/lower limit, or SP upper/ lower limit is changed when the control output 1 type is set to the simple transfer SP, simple transfer ramp SP, or simple transfer PV.

*5   PRST (Program Start) can be set even when the Program Pattern parameter is set to OFF, but the function will be disabled.

*6   This function can be set for heating/cooling control or for floating control for Position-proportional Models, but the setting will be disabled.

*7   You can use this parameter only with the E5EC-PR□-8□□ or E5AC-PR□-8□□. (The Digital Controller must be manufactured in August 2014 or later (version 2.2 or higher).)

A-6-4   Manual Control Level

Parameters	Setting (monitor) value	Default	Unit
Manual MV	−5.0 to 105.0 (standard)[*1] −105.0 to 105.0 (heating/cooling)[*2] −5.0 to 105.0 (position-proportional)[*1][*2]	0.0	%

[*1]   When the Manual MV Limit Enable parameter is set to ON, the setting range will be the MV lower limit to the MV upper limit.

[*2]   The valve opening is monitored for floating control or for close control with the Direct Setting of Position-proportional MV parameter set to OFF.

A-6-5   Monitor/Setting Item Level

The contents displayed vary depending on the Monitor/Setting 1 to 5 (advanced function setting level) setting.

*1   If the Manual MV Limit Enable parameter is set to ON, the setting range will be the MV lower limit to the MV upper limit.

*2   The setting ranges are different for relay and voltage outputs (for driving SSR) and for linear current outputs.

*3   This parameter can be set when the Program Pattern parameter is set to OFF, but the function will be disabled.

*4   WR1 to WR8 are not displayed when the logic operation function is not used.

*5   With the E5CC-U, E5DC, E5DC-B or E5GC, if the control output is a linear current output, the control output can be used as a simple transfer output. (The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

*6   You can select seconds (S) only for the E5DC, E5DC-B and E5GC. (The E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

*7   You can select the status display message (WR) only for the E5DC, E5DC-B and E5GC. (The E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)

*8   This parameter is not supported for E5CC, E5EC, and E5AC version 2.0 or lower.

*9   You can use this parameter only with the E5EC-PR□-8□□ or E5AC-PR□-8□□. (The Digital Controller must be manufactured in August 2014 or later (version 2.2 or higher).)

*1 Initialized to input setting range upper and lower limits, or scaling upper and lower limits.

*2 Clamped by SP upper and lower limits.

*3 This parameter is initialized only when the input type is changed to analog input when the RT parameter is ON. The RT parameter turns OFF.

*4 Initialization is performed as shown below according to the transfer output type setting. The initialization differs depending on the changed parameter and the output type setting.
- SP: SP upper and lower limits
- Ramp SP: SP upper and lower limits
- PV: Input setting range upper and lower limits or scaling upper and lower limits
- MV (Heating): 100.0/0.0
- MV (Cooling): 100.0/0.0
- Valve opening: 100.0/0.0
  - *4.1 Initialized only when the transfer output type is set to SP, Ramp SP, or PV.
  - *4.2 Initialized only when the transfer output type is set to MV (Heating) or MV (Cooling).

*4.3   Initialized to the above default values regardless of the settings for changing the transfer output type.

*5   Initialized as follows according to the Standard or Heating/Cooling parameter setting.
   • MV Upper Limit: 100.0
   • MV Lower Limit: Standard 0.0, heating/cooling −100.0

*6   Initialized to control output (cooling) for heating and cooling control, according to the following.
   (The defaults for standard control are the defaults in the parameter list.)
   E5CC, E5CC-U, E5CC-B, E5EC, E5EC-B, E5AC, E5DC, or E5DC-B
   • With control output 2: The Control Output 2 Assignment parameter is initialized to control output (cooling).
   • If the Digital Controller does not have control output 2 but has four auxiliary outputs, the Auxiliary Output 4 Assignment parameter is initialized to Control Output (Cooling).
   • If the Digital Controller does not have control output 2 but has two auxiliary outputs, the Auxiliary Output 2 Assignment parameter is initialized to Control Output (Cooling).
   • Otherwise, the Auxiliary Output 2 Assignment parameter is initialized to Control Output (Cooling).
   E5GC
   • The Auxiliary Output 1 Assignment parameter is initialized to control output (cooling).

*7   If the Program Pattern parameter is set to OFF, the Auxiliary Output 1 Assignment parameter is initialized as follows:
   • Digital Controllers with HB and HS alarms: Heater alarm
   • Digital Controllers without HB and HS alarms: Alarm 1
   If the Program Pattern parameter is not set to OFF, the Auxiliary Output 1 Assignment parameter is initialized to the program end output. If the E5GC is used for heating/cooling control, the parameter is initialized to Control Output (Cooling).

*8   If the Program Start parameter is assigned when the program pattern is changed to OFF, the Program Start parameter will be initialized to "not assigned."

*9   For a temperature input, the Integral/Derivative Time Unit parameter is initialized only when the RT parameter is turned ON. The default is as follows:
   • Integral/Derivative Time Unit: 0.1 s (The PID parameters are also initialized when the Integral/Derivative Time Unit parameter is initialized.) [19]

*10   This parameter is initialized to the new Password to Move to Protect Level password.

*11   When the ST parameter is turned ON, the SP Mode parameter is initialized to LSP and the Remote SP Enable parameter is initialized to OFF.

*12   When the Remote SP Enable parameter is turned OFF, the SP Mode parameter is initialized to LSP.

*13   These parameters are initialized when the Input Type parameter is changed from a temperature input to an analog input or from an analog input to a temperature input.

*14   This parameter is initialized when the Input Type parameter is changed from a temperature input to an analog input or from an analog input to a temperature input. However, it is not initialized if the applicable alarm is an MV absolute-value upper-limit alarm or an MV absolute-value lower-limit alarm.

*15   This parameter is initialized to 50 (0.50%) if a non-MV alarm is changed to an MV alarm. This parameter is initialized to 2 (0.2°C or 0.02%FS) if an MV alarm is changed to a non-MV alarm.

*16   Write to both so that the SP and the currently selected Multi-SP SP0 to SP7 match.

*17   When the ST condition is met, the SP Mode parameter is initialized to LSP and the Remote SP Enable parameter is initialized to OFF.

*18   Initialized to 0.8 when the temperature unit is °C, and to 1.4 when the temperature unit is °F.

*19   These parameters are initialized as follows:
   • Integral/Derivative Time Unit of 1 s: Proportional band to 8, integral time to 233, and derivative time to 40. (This applies to both the heating and cooling constants.)
   • Integral/Derivative Time Unit of 0.1 s: Proportional band to 8.0, integral time to 233.0, and derivative time to 40.0. (This applies to both the heating and cooling constants.)

*20   This parameter is initialized to 4.0 for closed control and 2.0 for floating control.

*21   If the Close/Floating parameter is set to floating and the integral time is 0, the parameter is initialized to 233. If the integral time is 0.0, it is initialized to 233.0.

*22   Initialization is performed as shown below if the Control Output 1 Assignment parameter is set to a simple transfer output. The initialization differs depending on the changed parameter and the simple transfer output setting. You can use the simple transfer output only for the E5CC-U, E5DC, E5DC-B, and E5GC. (The E5CC-U must be manufactured in May 2014 or later (version 2.2 or higher) and the E5DC must be manufactured in July 2014 or later (version 2.2 or higher).)
   • Simple Transfer SP: SP upper and lower limits
   • Simple Transfer Ramp SP: SP upper and lower limits
   • Simple Transfer PV: Input setting range upper and lower limits or scaling upper and lower limits
   • Simple Transfer MV (Heating): 100.0/0.0
   • Simple Transfer MV (Cooling): 100.0/0.0

*22.1   Initialized only when the simple transfer output is set to Simple Transfer SP, Simple Transfer Ramp SP, or Simple Transfer PV.

*22.2   Initialized only when the simple transfer output is set to Simple Transfer MV (Heating) or Simple Transfer MV (Cooling).

*22.3   Initialized to the above default values regardless of the settings for changing the simple transfer output.

*23   If you change the temperature unit for the E5DC or E5DC-B, these values will be converted to the new temperature unit. (The E5DC must be manufactured in July 2014 or later (version 2.2).)

A-7   Sensor Input Setting Range, Indication Range, Control Range

|	Specifications	Set value	Input setting range	Input indication range
Resistance thermometer	Pt100	0	−200 to 850 (°C)/−300 to 1500 (°F)	−220 to 870 (°C)/−340 to 1540 (°F)
		1	−199.9 to 500.0 (°C)/−199.9 to 900.0 (°F)	−199.9 520.0 (°C)/−199.9 to 940.0 (°F)
		2	0.0 to 100.0 (°C)/0.0 to 210.0 (°F)	−20.0 to 120.0 (°C)/−40.0 to 250.0 (°F)
	JPt100	3	−199.9 to 500.0 (°C)/−199.9 to 900.0 (°F)	−199.9 to 520.0 (°C)/−199.9 to 940.0 (°F)
		4	0.0 to 100.0 (°C)/0.0 to 210.0 (°F)	−20.0 to 120.0 (°C)/−40.0 to 250.0 (°F)
Thermocouple	K	5	−200 to 1300 (°C)/−300 to 2300 (°F)	−220 to 1320 (°C)/−340 to 2340 (°F)

	S	17	0 to 1700 (°C)/0 to 3000 (°F)	−20 to 1720 (°C)/−40 to 3040 (°F)
	B	18	100 to 1800 (°C)/300 to 3200 (°F)	0 to 1820 (°C)/0 to 3240 (°F)
	C/W	19	0 to 2300 (°C)/0 to 3200 (°F)	−20 to 2320 (°C)/−40 to 3240 (°F)
	PLII	20	0 to 1300 (°C)/0 to 2300 (°F)	−20 to 1320 (°C)/−40 to 2340 (°F)
ES1B Infrared Temperature Sensor	10 to 70°C	21	0 to 90 (°C)/0 to 190 (°F)	−20 to 130 (°C)/−40 to 270 (°F)
	60 to 120°C	22	0 to 120 (°C)/0 to 240 (°F)	−20 to 160 (°C)/−40 to 320 (°F)
	115 to 165°C	23	0 to 165 (°C)/0 to 320 (°F)	−20 to 205 (°C)/−40 to 400 (°F)
	140 to 260°C	24	0 to 260 (°C)/0 to 500 (°F)	−20 to 300 (°C)/−40 to 580 (°F)
Current input	4 to 20 mA	25	Any of the following ranges, by scaling: −1999 to 9999 −199.9 to 999.9 −19.99 to 99.99 −1.999 to 9.999	−5% to 105% of setting range. The display shows −1999 to 9999 (numeric range with decimal point omitted).
	0 to 20 mA	26		
Voltage input	1 to 5 V	27		
	0 to 5 V	28		
	0 to 10 V	29		
	0 to 50 mV	30*		

- The default is 5.
- The applicable standards for each of the above input ranges are as follows:

  K, J, T, E, N, R, S, B: JIS C1602-2015, IEC60584-1

  L: Fe-CuNi, DIN 43710-1985

  U: Cu-CuNi, DIN 43710-1985

  C/W: W5Re/W26Re, JIS C 1602-2015, ASTM E988-1990

  JPt100: JIS C 1604-1989, JIS C 1606-1989

  Pt100: JIS C 1604-1997, IEC 60751

  PLII: According to Platinel II Electromotive Force Table by Engelhard Corp.

* The 0 to 50 mV range can be used only for E5CC-U Digital Controllers and only if they are manufactured in May 2014 or later (version 2.2 or higher).

A-8   Setting Levels Diagram

This diagram shows all of the setting levels. To move to the Advanced Function Setting Level and Calibration Level, you must enter passwords. Some parameters are not displayed depending on the protect level setting and the conditions of use.
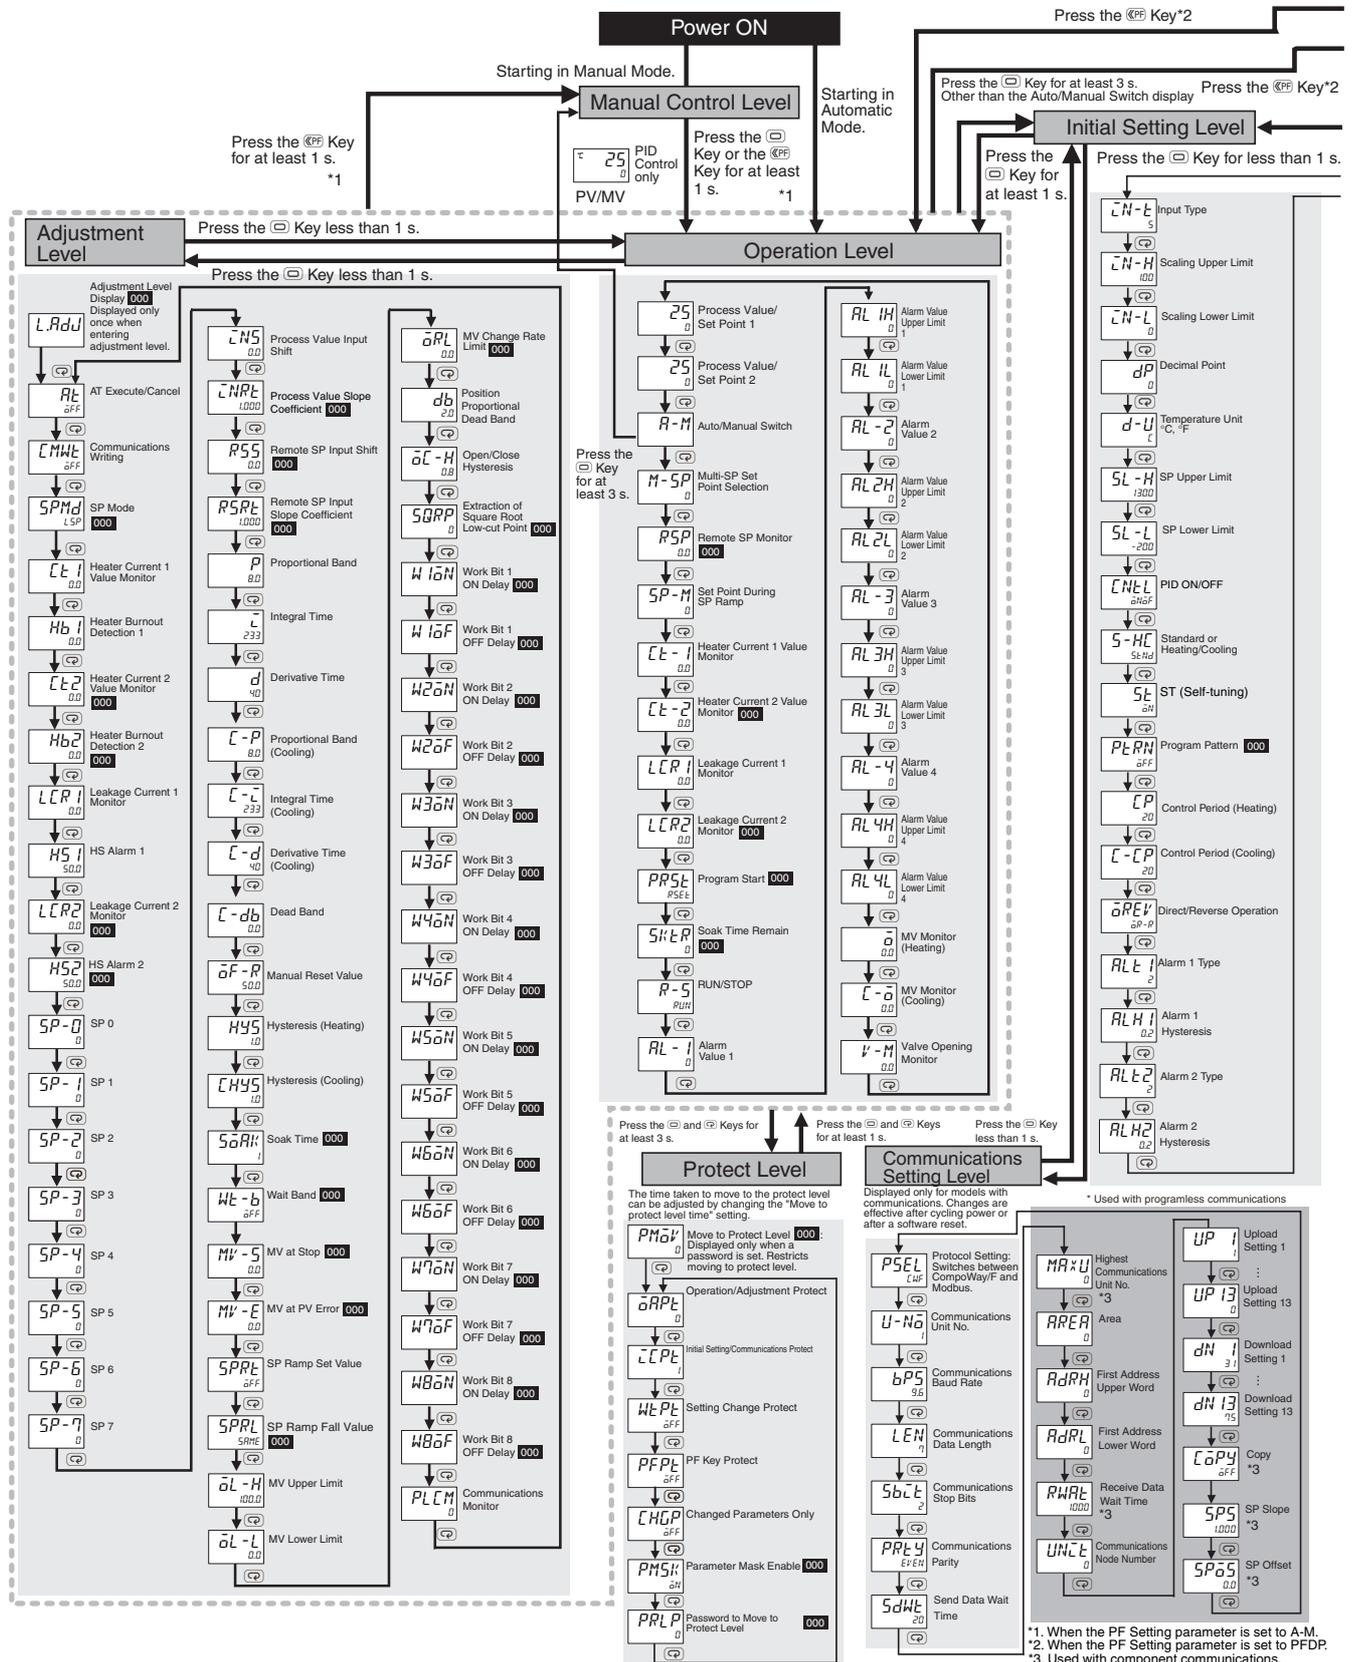

Control stops when you move from the Operation Level to the Initial Setting Level.
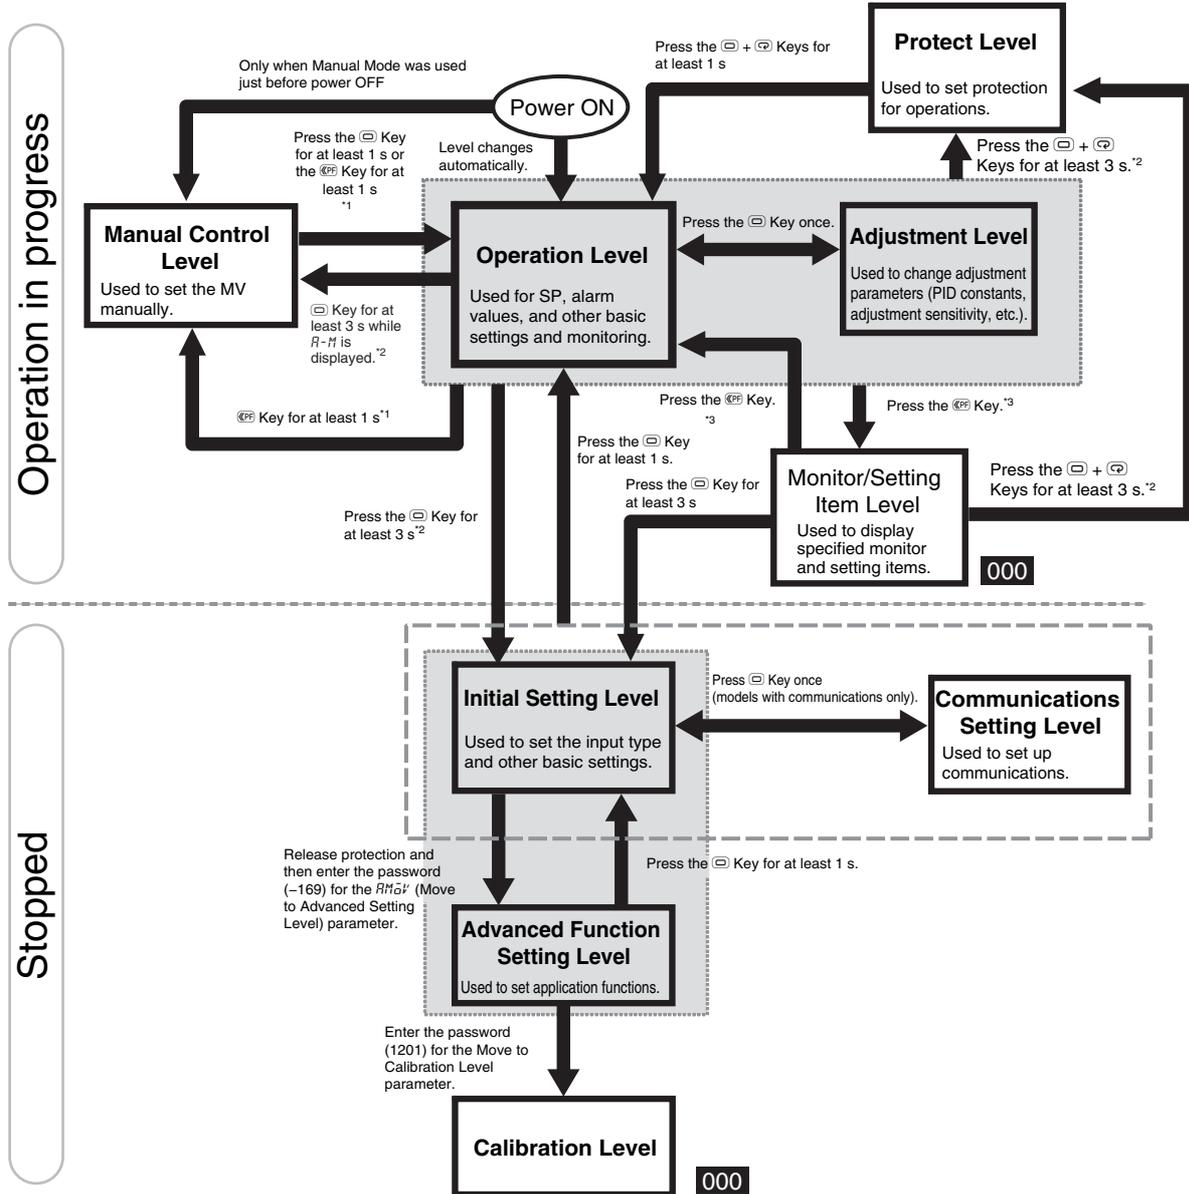

*1   Set the PF Setting parameter to R-M (Auto/Manual).
*2   The No. 1 display will flash when the keys are pressed for 1 s or longer.
*3   Set the PF Setting parameter to $PFdP$ (monitor/setting items).

A-9   Parameter Flow

This section describes the parameters set in each level. Pressing the ⊡ (Mode) Key at the last parameter in each level returns to the top parameter in that level. Some parameters may not be displayed depending on the model and other settings.

Power ON

Starting in Manual Mode.

Manual Control Level

Starting in Automatic Mode.

Press the ⟪PF⟫ Key*2

Press the ⟪⟫ Key for at least 3 s. Other than the Auto/Manual Switch display   Press the ⟪PF⟫ Key*2

Initial Setting Level

Press the ⟪PF⟫ Key for at least 1 s. *1

Press the ⟪⟫ Key or the ⟪PF⟫ Key for at least 1 s. *1

Press the ⟪⟫ Key for at least 1 s.

Press the ⟪⟫ Key for less than 1 s.

PV/MV — PID Control only

Adjustment Level

Press the ⟪⟫ Key less than 1 s.

Operation Level

Press the ⟪⟫ Key less than 1 s.

Press the ⟪⟫ Key for at least 3 s.

Adjustment Level

- L.AdJ — Adjustment Level Display 000 Displayed only once when entering adjustment level.
- AT — AT Execute/Cancel
- CMWt — Communications Writing
- SPMd — SP Mode
- Ct 1 — Heater Current 1 Value Monitor
- Hb 1 — Heater Burnout Detection 1
- Ct2 — Heater Current 2 Value Monitor 000
- Hb2 — Heater Burnout Detection 2 000
- LCR 1 — Leakage Current 1 Monitor
- HS 1 — HS Alarm 1
- LCR2 — Leakage Current 2 Monitor 000
- HS2 — HS Alarm 2 000
- SP-0 — SP 0
- SP- 1 — SP 1
- SP-2 — SP 2
- SP-3 — SP 3
- SP-4 — SP 4
- SP-5 — SP 5
- SP-6 — SP 6
- SP-7 — SP 7

- iNS — Process Value Input Shift
- iNRt — Process Value Slope Coefficient 000
- RSS — Remote SP Input Shift 000
- RSRt — Remote SP Input Slope Coefficient 000
- P — Proportional Band
- i — Integral Time
- d — Derivative Time
- C-P — Proportional Band (Cooling)
- C-i — Integral Time (Cooling)
- C-d — Derivative Time (Cooling)
- C-db — Dead Band
- oF-R — Manual Reset Value
- HYS — Hysteresis (Heating)
- CHYS — Hysteresis (Cooling)
- SoAK — Soak Time 000
- Wt-b — Wait Band 000
- MV-S — MV at Stop 000
- MV-E — MV at PV Error 000
- SPRt — SP Ramp Set Value
- SPRL — SP Ramp Fall Value 000
- oL-H — MV Upper Limit
- oL-L — MV Lower Limit

- oRL — MV Change Rate Limit 000
- db — Position Proportional Dead Band
- oC-H — Open/Close Hysteresis
- SQRP — Extraction of Square Root Low-cut Point 000
- W 1oN — Work Bit 1 ON Delay 000
- W 1oF — Work Bit 1 OFF Delay 000
- W2oN — Work Bit 2 ON Delay 000
- W2oF — Work Bit 2 OFF Delay 000
- W3oN — Work Bit 3 ON Delay 000
- W3oF — Work Bit 3 OFF Delay 000
- W4oN — Work Bit 4 ON Delay 000
- W4oF — Work Bit 4 OFF Delay 000
- W5oN — Work Bit 5 ON Delay 000
- W5oF — Work Bit 5 OFF Delay 000
- W6oN — Work Bit 6 ON Delay 000
- W6oF — Work Bit 6 OFF Delay 000
- W7oN — Work Bit 7 ON Delay 000
- W7oF — Work Bit 7 OFF Delay 000
- W8oN — Work Bit 8 ON Delay 000
- W8oF — Work Bit 8 OFF Delay 000
- PLCM — Communications Monitor

Operation Level

- 25 — Process Value/Set Point 1
- 25 — Process Value/Set Point 2
- A-M — Auto/Manual Switch
- M-SP — Multi-SP Set Point Selection
- RSP — Remote SP Monitor 000
- SP-M — Set Point During SP Ramp
- Ct- 1 — Heater Current 1 Value Monitor
- Ct-2 — Heater Current 2 Value Monitor 000
- LCR 1 — Leakage Current 1 Monitor
- LCR2 — Leakage Current 2 Monitor 000
- PRSt — Program Start 000
- SKtR — Soak Time Remain 000
- R-S — RUN/STOP
- AL- 1 — Alarm Value 1

- AL 1H — Alarm Value Upper Limit 1
- AL 1L — Alarm Value Lower Limit 1
- AL-2 — Alarm Value 2
- AL2H — Alarm Value Upper Limit 2
- AL2L — Alarm Value Lower Limit 2
- AL-3 — Alarm Value 3
- AL3H — Alarm Value Upper Limit 3
- AL3L — Alarm Value Lower Limit 3
- AL-4 — Alarm Value 4
- AL4H — Alarm Value Upper Limit 4
- AL4L — Alarm Value Lower Limit 4
- o — MV Monitor (Heating)
- C-o — MV Monitor (Cooling)
- V-M — Valve Opening Monitor

Initial Setting Level

- iN-t — Input Type
- iN-H — Scaling Upper Limit
- iN-L — Scaling Lower Limit
- dP — Decimal Point
- d-U — Temperature Unit °C, °F
- SL-H — SP Upper Limit
- SL-L — SP Lower Limit
- CNtL — PID ON/OFF
- S-HC — Standard or Heating/Cooling
- St — ST (Self-tuning)
- PtRN — Program Pattern 000
- CP — Control Period (Heating)
- C-CP — Control Period (Cooling)
- oREV — Direct/Reverse Operation
- ALt 1 — Alarm 1 Type
- ALH 1 — Alarm 1 Hysteresis
- ALt2 — Alarm 2 Type
- ALH2 — Alarm 2 Hysteresis

Press the ⟪⟫ and ⟪⟫ Keys for at least 3 s.

Press the ⟪⟫ and ⟪⟫ Keys for at least 1 s.

Press the ⟪⟫ Key less than 1 s.

Protect Level

The time taken to move to the protect level can be adjusted by changing the "Move to protect level time" setting.

- PMoV — Move to Protect Level 000: Displayed only when a password is set. Restricts moving to protect level.
- oAPt — Operation/Adjustment Protect
- iCPt — Initial Setting/Communications Protect
- WtPt — Setting Change Protect
- PFPt — PF Key Protect
- CHGP — Changed Parameters Only
- PMSK — Parameter Mask Enable 000
- PRLP — Password to Move to Protect Level 000

Communications Setting Level

Displayed only for models with communications. Changes are effective after cycling power or after a software reset.

- PSEL — Protocol Setting: Switches between CompoWay/F and Modbus.
- U-No — Communications Unit No.
- bPS — Communications Baud Rate
- LEN — Communications Data Length
- SbLt — Communications Stop Bits
- PRtY — Communications Parity
- SdWt — Send Data Wait Time

- MAxU — Highest Communications Unit No. *3
- AREA — Area
- AdRH — First Address Upper Word
- AdRL — First Address Lower Word
- RWRt — Receive Data Wait Time *3
- UNit — Communications Node Number

* Used with programless communications

- UP 1 — Upload Setting 1
- UP 13 — Upload Setting 13
- dN 1 — Download Setting 1
- dN 13 — Download Setting 13
- CoPY — Copy *3
- SPS — SP Slope *3
- SPoS — SP Offset *3

*1. When the PF Setting parameter is set to A-M.
*2. When the PF Setting parameter is set to PFDP.
*3. Used with component communications.

Monitor/Setting Item Level `000`

`25` `0` Monitor/Setting Item Display 1 `000`	`PF` → Monitor/Setting Item Display 2 `000`	`PF` → Monitor/Setting Item Display 3 `000`	`PF` → Monitor/Setting Item Display 4 `000`	`PF` → Monitor/Setting Item Display 5 `000`

Note: The monitor/setting items to be displayed is set in the Monitor/Setting Item 1 to 5 parameters (advanced function setting level).

Press the ▢ Key for at least 1 s.

Advanced Function Setting Level

Symbol	Description
`ALt2` `2`	Alarm 2 Type
`ALH2` `0.2`	Alarm 2 Hysteresis
`ALt3` `2`	Alarm 3 Type
`ALH3` `0.2`	Alarm 3 Hysteresis
`ALt4` `2`	Alarm 4 Type
`ALH4` `0.2`	Alarm 4 Hysteresis
`o1St` `4-20`	Control Output 1 Signal
`o2St` `4-20` `000`	Control Output 2 Signal
`tRSt` `4-20` `000`	Transfer Output Signal
`tR-t` `oFF` `000`	Transfer Output Type
`tR-H` `100.0` `000`	Transfer Output Upper Limit
`tR-L` `0.0` `000`	Transfer Output Lower Limit
`o1tH` `1300`	Simple Transfer Output 1 Upper Limit
`o1tL` `-200`	Simple Transfer Output 1 Lower Limit
`EV-1` `MSP0`	Event Input Assignment 1
`EV-2` `StoP`	Event Input Assignment 2
`EV-3` `NoNE`	Event Input Assignment 3
`EV-4` `NoNE`	Event Input Assignment 4
`EV-5` `NoNE` `000`	Event Input Assignment 5 (E5EC/E5AC only)
`EV-6` `NoNE` `000`	Event Input Assignment 6 (E5EC/E5AC only)
`CLFL` `FLot`	Close/Floating
`VMSL` `MEAS` `800`	Valve Opening Monitor Selection
`CALb` `oFF`	Motor Calibration
`Mot` `30`	Travel Time
`SQR` `oFF` `000`	Extraction of Square Root Enable
`AMoV` `0`	Move to Advanced Function Setting Level: Displayed when initial setting/communications protect is set to 0.

Move by setting password (→169).

Symbol	Description
`CNCt` `oFF`	Parameter Initialization
`MSPU` `oFF`	Number of Multi-SP Points
`SPRU` `M`	SP Ramp Time Unit
`RESt` `A`	Standby Sequence Reset
`Sb1N` `N-o`	Auxiliary Output 1 Open in Alarm
`Sb2N` `N-o`	Auxiliary Output 2 Open in Alarm
`Sb3N` `N-o`	Auxiliary Output 3 Open in Alarm
`Sb4N` `N-o`	Auxiliary Output 4 Open in Alarm
`HbU` `oN`	HB ON/OFF
`HbL` `oFF`	Heater Burnout Latch
`HbH` `0.1`	Heater Burnout Hysteresis
`St-b` `15.0`	ST Stable Range
`ALFA` `0.65`	α
`tidU` `1`	Integral/Derivative Time Unit
`At-G` `0.8` `000`	AT Calculated Gain
`At-H` `0.8`	AT Hysteresis `000`
`LCMA` `20.0`	Limit Cycle MV Amplitude `000`
`CNF` `0.0`	Input Digital Filter
`MAV` `oFF`	Moving Average Count * The default is 8 for models other than the E5□C-□-0□□.
`PMAV` `16`	FB Moving Average Count `800`
`o-dP` `oFF`	MV Display

Symbol	Description
`REt` `oFF`	Automatic Display Return Time
`bRGt` `3` `000`	Display Brightness
`A 1Lt` `oFF`	Alarm 1 Latch
`A2Lt` `oFF`	Alarm 2 Latch
`A3Lt` `oFF`	Alarm 3 Latch
`A4Lt` `oFF`	Alarm 4 Latch
`PRLt` `3`	Move to Protect Level Time
`CJC` `oN`	Cold Junction Compensation Method
`A 1oN` `0`	Alarm 1 ON Delay
`A2oN` `0`	Alarm 2 ON Delay
`A3oN` `0`	Alarm 3 ON Delay
`A4oN` `0`	Alarm 4 ON Delay
`A 1oF` `0`	Alarm 1 OFF Delay
`A2oF` `0`	Alarm 2 OFF Delay
`A3oF` `0`	Alarm 3 OFF Delay
`A4oF` `0`	Alarm 4 OFF Delay
`MV SE` `oFF`	MV at Stop and Error Addition `000`
`AMAd` `oFF`	Auto/Manual Select Addition
`MANt` `HoLd`	Manual Output Method
`MANC` `0.0`	Manual MV Initial Value

Symbol	Description
`Rt` `oFF`	RT `000`
`HSU` `oN`	HS Alarm Use
`HSL` `oFF`	HS Alarm Latch
`HSH` `0.1`	HS Alarm Hysteresis
`LbA` `0`	LBA Detection Time
`LbAL` `8.0`	LBA Level
`LbAb` `3.0`	LBA Band
`oUt1` `0N`	Control Output 1 Assignment
`oUt2` `NoNE`	Control Output 2 Assignment
`SUb1` `ALM1`	Auxiliary Output 1 Assignment
`SUb2` `ALM2`	Auxiliary Output 2 Assignment
`SUb3` `ALM3`	Auxiliary Output 3 Assignment
`SUb4` `ALM4`	Auxiliary Output 4 Assignment `000`
`ALMA` `49`	Integrated Alarm Assignment
`t-U` `M`	Soak Time Unit `000`
`AL SP` `SP-M`	Alarm SP Selection
`RS-t` `4-20` `000`	Remote SP Input
`RSPU` `oFF` `000`	Remote SP Enable
`RSPH` `1300` `000`	Remote SP Upper Limit
`RSPL` `-200` `000`	Remote SP Lower Limit

Symbol	Description
`SPtR` `oFF`	SP Tracking `000`
`P-db` `0`	PV Dead Band `000`
`MANL` `0`	Manual MV Limit Enable
`PMV d` `oFF`	Direct Setting of Position Proportional MV
`PV RP` `20`	PV Rate of Change Calculation Period
`HCtM` `oFF`	Heating/Cooling Tuning Method
`oMPH` `1.0`	Minimum Output ON/OFF Band
`PF` `SHFt`	PF Setting
`PFd1` `0` `000`	Monitor/Setting Item 1
`PFd2` `0` `000`	Monitor/Setting Item 2
`PFd3` `0` `000`	Monitor/Setting Item 3
`PFd4` `0` `000`	Monitor/Setting Item 4
`PFd5` `0` `000`	Monitor/Setting Item 5
`SPd1` `4`	PV/SP No. 1 Display Selection * The default is 1 for models other than the E5□C-□-0□□.
`SPd2` `0`	PV/SP No. 2 Display Selection
`odSL` `o`	MV Display Selection
`PV dP` `oN`	PV Decimal Point Display `000`
`PV St` `oFF`	PV Status Display Function
`SV St` `oFF`	SV Status Display Function
`d.REF` `0.25`	Display Refresh Period
`LCMt` `0.2`	LCT Cooling Output Minimum ON Time
`CMoV` `0`	Move to Calibration Level `000`
