SETTING TRANSITION CHARTS Thank you for purchasing the ZX2 Series Smart Sensor. This manual provides information regarding functions, performance and operating methods that are required for using the sensor.

When using the ZX2 Smart Sensor, make sure to observe the following:

- The ZX2 Smart Sensor must be operated by personnel knowledgeable in electrical engineering.
- To ensure correct use, please read this manual thoroughly to deepen your understanding of the product.
- Please keep this manual in a safe place so that it can be referred to whenever necessary.

4

### **Terms and Conditions Agreement**

## Warranty, Limitations of Liability

### Warranties

### **Exclusive Warranty**

Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

### Limitations

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

### **Buyer Remedy**

Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

SETTING TRANSITION CHARTS Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

### **Programmable Products**

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

### **Disclaimers**

### **Performance Data**

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

### Change in Specifications

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

### **Errors and Omissions**

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

CONTENTS The fo

The following signal words are used in this manual.

Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.

## **Meanings of Alert Symbols**

The following alert symbols are used in this manual.

Indicates the possibility of laser radiation.

Indicates prohibition when there is a risk of minor injury from electrical shock or other source if the product is disassembled.

## **Laser Safety**

■ Sensor Head

ZX2-LD50L, LD50, LD100L, LD100: Class 2 (GB7247.1:2012 2类激光产品)

## **∕ WARNING**

Never look into the laser beam.

Doing so continuously will result in visual impairment.

Do not disassemble the product.

Doing so may cause the laser beam to leak, resulting in the danger of visual impairment.

■ Sensor Head

ZX2-LD50L, LD50, LD100L, LD100: Class1 (EN60825-1:2014+A11:2021, IEC60825-1:2014, FDA:Laser Notice No.56)

IEC60825-1:2014, FDA:Laser Notice No.56)

ZX2-LD50V: Class1 (EN60825-1:2014+A11:2021, IEC60825-1:2014, FDA:Laser Notice No.56, GB7247.1:2012 1类激光产品)

## **⚠** WARNING

Do not disassemble the product.

Doing so may cause the laser beam to leak, resulting in the danger of visual impairment.

SPECIFI-CATIONS

INDEX

In Europe, diffuse-reflective models in the ZX2-LD50V, LD50L, LD50, LD100L, LD100 are categorized as a Class 1 laser product according to EN60825-1 (see note).

CONTENTS

INTRODUCTION

The CE markings on the products also reflect these categorizations.

In the U.S.A., diffuse-reflective models in the ZX2-LD50V, LD50L, LD50, LD100L, LD100 are classified into Class 1 by the IEC 60825-1:2014 standard according to the regulations of Laser Notice No.56 of the FDA standard.

This product has already been registered with the CDRH (Center for Devices and Radiological Health). (Accession Number: 1020665)

In China

Diffuse-reflective models in the ZX2-LD50L, LD50, LD100L, LD100 are categorized as Class 2 laser products according to GB7247.1:2012 (see note). (2类激光产品)

Diffuse-reflective models in the ZX2-LD50V is categorized as Class 1 laser products according to GB7247.1:2012 (see note). (1类激光产品)

Note: Europe: Class 1 of EN 60825-1: 2014 +A11:2021

= IEC 60825-1: 2014

U.S.A.: Class 1 of FDA (Laser Notice No.56)

China: Class 1 and Class 2 of GB7247.1:2012

The ZX2 Series is meant to be built into final system equipment. Pay special attention to the following precautions for the safe use of the product:

(1) ZX2-LD□□□ emits visual laser beam. Do not stare directly into the laser.

Make sure that the laser beam path is terminated. If specular objects are present in the laser beam path, make sure that they are prevented from reflecting the laser beam.

When used without an enclosure, make sure the laser path from eye level is avoided.

- (2) To avoid exposure to hazardous laser radiation, do not displace nor remove the protective housing during operation, maintenance, and any other servicing.
- (3) As for countries other than those of Europe and the U.S.A., observe the regulations and standards specified by each country.
- (4) Label Indications

The EN and FDA labels are supplied with the product.

Replace the current labels with them according to the instructions given in the manuals.

## **Precautions for Safe Use**

Please observe the following precautions for safe use of the products.

CONTENTS

### Installation Environment

 Do not use the product in environments where it can be exposed to inflammable/ explosive gas.

 Do not install the product close to high-voltage devices and power devices in order to secure the safety of operation and maintenance.

SETTING TRANSITION CHARTS

### ■ Power Supply and Wiring

- The supply voltage must be within the rated range (DC12 to 24 V±10%).
- Reverse connection of power supply is not allowed. Connection to AC power supply is also not allowed.
- Open-collector outputs should not be short-circuited.
- High-voltage lines and power lines must be wired separately from this product.
   Wiring them together or placing in the same duct may cause induction, resulting in malfunction or damage.
- Always turn off the power supply before connecting or disconnecting cables and connectors.

### Applicable standards

- EN61326-1
- Electromagnetic environment : Industrial electromagnetic environment (EN/IEC 61326-1 Table 2)
- There may be cases that current output or voltage output fluctuate within 1%F.S when a sensor is experienced electromagnetic interference under the condition of the response time 30µs.

### Others

- Do not attempt to dismantle, repair, or modify the product.
- Dispose of this product as industrial waste.

### **Precautions for Correct Use**

Please observe the following precautions to prevent failure to operate, malfunctions, or

CONTENTS

INTRODUCTION

PREPARATION FOR

MEASUREMENT

## Installation of the Product

■ Installation Site

Do not install the product in locations subjected to the following conditions:

· Ambient temperature outside the rating

undesirable effects on product performance.

- Rapid temperature fluctuations (causing condensation)
- Relative humidity outside the range of 35 to 85%
- Presence of corrosive or flammable gases
- · Presence of dust, salt, or iron particles
- · Direct vibration or shock
- Reflective sensor of intense light (such as other laser beams or electric arc-welding machines)
- · Direct sunlight or near heaters
- · Water, oil, or chemical fumes or spray
- · Strong magnetic or electric field

### Component Installation and Handling

### ■ Power Supply and Wiring

- When using a commercially available switching regulator, make sure that the FG terminal is grounded.
- If surge currents are present in the power lines, connect surge absorbers that suit the operating environment.
- When connecting two or more amplifier units by using calculating units, make sure
  that the linear GND lines of the amplifier units are connected to each other. Supply
  power to all connected amplifier units at the same time.
- Before turning ON the power after the product is connected, make sure that the
  power supply voltage is correct, there are no incorrect connections (e.g. load shortcircuit) and the load current is appropriate. Incorrect wiring may result in breakdown
  of the product.
- The ferrite core accessory must be attached to the sensor head cable before use.
   (For how to attach the ferrite core, see pages 24 and 28.)
- The cables must be 10 m or shorter in total length for amplifier units. For extension
  of the cable of amplifier units, shielded cables of the same type must be used. To
  extend the cable from the sensor head, an optional extension cable (ZX2-XC□R)
  must be used. Only one extension cable can be used.
- When using calculating units, make sure that the linear GND lines of the amplifier units are connected to each other.

### Warming Up

After turning ON the power supply, allow the product to stand for at least 10 minutes before use. The circuits are still unstable just after the power supply is turned ON, so measured values may fluctuate gradually.

A warmup of at least 10 minutes is also required after canceling LD-OFF input if LD-OFF input is being used.

### ■ Sensing Object

The product cannot accurately measure the following types of objects: Transparent objects, objects with an extremely low reflective sensor ratio, objects smaller than the beam size, objects with a large curvature, excessively inclined objects, etc.

### Mutual Interference

Inserting a calculating unit between amplifier units can prevent mutual interference between two sensor heads.

### ■ Maintenance

- Always turn OFF the power supply before adjusting or connecting/disconnecting the sensor head.
- Do not use thinner, benzene, acetone or kerosene to clean the sensor head and
  amplifier units. If large dust particles adhere to the front filter of the sensor head,
  use a blower brush (used to clean camera lenses) to blow them off. Do not blow the
  dust away with your mouth. To remove smaller dust particles, use a soft cloth (for
  lenses) with a small amount of alcohol. Take care not to wipe them off with excessive force.

Scratches on the filter may cause errors.

## **Installing Sensor Heads**

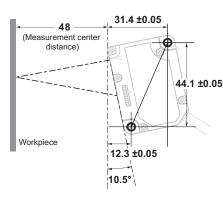

### Installation Method

- · Check the Sensor Head setting position by its emission center mark.
- Fix the sensor head in place with M3 screws. The screws must be tightened with a torque of 0.5 N·m.

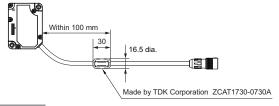

Tilt the regular-reflective model as shown below with respect to the workpiece.
 A mounting bracket can also be attached to the regular-reflective model to tilt it correctly. (E39-L178; see page 141.)

ZX2-LD50V

ZX2 User's Manual Installation

 Be sure to attach the ferrite core accessory to the Sensor Head. Attach it within 100 mm of the Sensor Head side.

### Important

- When mounting a Sensor Head, take care not to touch the emitter and receiver. Finger marks on the emitter and receiver may hinder correct measurements. If you have touched them by mistake, wipe them with a clean, soft cloth.
- Fix the connectors in places that are not subject to vibration or impact.

### Installation Method

Hook the connector end of the Sensor Head on the DIN Track, and press in at the bottom until the Amplifier Unit locks into place. If necessary, fix it in place by the End Plate.

DIN Track (Option)

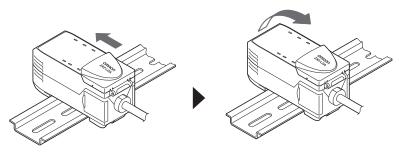

Important

Hook the connector end of the Sensor Head on the DIN Track first. The mounting strength may decrease if the output cable end is hooked on the DIN Track first.

## **Removal Method**

Push the Amplifier Unit and pull out from the connector end of the Sensor Head.

ZX2 User's Manual Installation

# **Connecting Calculating Units**

CONTENTS

Use a Calculating Unit to connect Amplifier Units when performing calculations between Amplifier Units and to prevent mutual interference between Sensor Heads.

INTRODUCTION

The number of Amplifier Units that can be connected differs depending on the functions to be used.

FLOW OF
OPERATION

Align the position of the connector  $\implies$  mark with the  $\blacktriangle$  mark on the Amplifier Unit, and insert the connector until it is locked in place.

Important

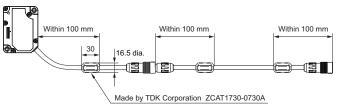

• Extending the Sensor Head cable

**Installation Method** 

An optional extension cable (ZX2-XC□R) must be used.

Only one extension cable can be used.

Be sure to attach the two supplied ferrite cores within 100 mm of each end of the extension cable.

### **Removal Method**

To disconnect the Sensor Head, hold the Sensor Head's connector ring and the Amplifier Unit connector, and then pull them straight out.

### Important

- Do not touch the terminals inside the connector.
- Prevent the connector from being subjected to static electricity.
- When the Sensor Head is replaced with a different type, set all the setting data inside the Amplifier Unit again since it will be cleared. (default values: → See page 123.)

### CONTENTS

## Wiring Input/Output Cables

The input/output cable has the following wires.

# INTRODUCTION Important

Wire the cable correctly. Incorrect wiring may damage the Smart Sensor. (For details on the cable's conductor cross-section and insulation resistance, see page 136.)

Cable color	Name	Function
Brown	Power supply	Connects the 10 to 30 VDC (including (p-p) 10% ripple) power supply. When using an Amplifier Unit with a PNP output, the power supply terminal is also the common I/O terminal for all I/O except for the analog output.
Blue	GND (0 V)	The GND terminal is the 0 V power supply terminal. When using an Amplifier Unit with an NPN output, the power supply terminal is also the common I/O terminal for all I/O except for the analog output.
White	HIGH judgement output	The HIGH judgement output outputs judgement results (HIGH).
Green	PASS judgment output	The PASS judgement output outputs judgement results (PASS).
Gray	LOW judgment output	The LOW judgement output outputs judgement results (LOW).
Yellow	Error output	This is output when the system detects an error. (For details on error messages, see page 130.)

Wiring Diagram ZX2 User's Manual

Cable color	Name	Function
Black	Analog output	The analog output outputs a current or voltage in accordance with the measured value.  (For details on setting method, see page 109.)
Shield	Analog GND (0 V)	The analog GND terminal is the 0 V terminal for the analog output.  Important  Use the shield for analog output separately from the blue (0V) wire for power supply.  When analog output is not used, be sure to connect this wire to the blue (0 V) wire.  When using Calculating Units, make sure that the analog GND lines of the Amplifier Units are connected to each other.
Pink	LD-OFF input	If this LD-OFF input signal is ON, the laser will stop emission, causing a light intensity error. In this case, the analog output, digital display, judgement output, and judgement output display signals will be output according to the non-measurement settings.  The sub-display will show Lapf. Warm up the sensor for at least 10 minutes after canceling LD-OFF input.  (For details on the output during non-measurement, see page 111.)
Orange	Zero reset input	The zero reset input is used to execute and cancel zero reset. (For details, see page 101.)
Purple	Timing input/ BANK input 0 (switched by external input setting)	Timing input:  Signal input wire for obtaining hold function timing. While this input is being input, the sub-display will show  L M N□.  BANK input 0:  Signal input wire for bank switching. Banks are switched by ON/OFF combinations with BANK input 1.  When connecting two or more Amplifier Units, use the CH1 Amplifier Unit for bank switching. The banks of the Amplifier Units of CH2 and later are switched together with CH1.  (For details on switching and inputs, see page 118.)

ZX2 User's Manual Wiring Diagram

Cable color	Name	Function
Red	Reset input/BANK input 1 (switched by external input setting)	Reset input:  While a reset signal is being input, RESEL is displayed on the sub-display.  • When the hold function is not used The output while a reset signal is being input is held in accordance with the output during non-measurement setting. This feature can be used in cases such as to input a mask signal if you want to stop output for a certain period.  • When the hold function is used If a reset signal is input, the state in effect before the hold function was set will be restored.  (For details on the hold function, see page 93, and for details on the output during non-measurement, see page 111.)  BANK input 1: Signal input wire for bank switching. Banks are switched by ON/OFF combinations with BANK input 0. When connecting two or more Amplifier Units, use the CH1 Amplifier Unit for bank switching. The banks of the Amplifier Units of CH2 and later are switched together with CH1.  (For details on switching and inputs, see page 118.)

### **Display of RUN Mode**

- \*1 The main display always shows the measured value. Default measured values are as follows:
  - O reference: Measurement center distance.
  - + indication: NEAR side
  - indication: FAR side
- \* The numerals shown in the above diagram are an example only. The actual display may be different.
- \* For how to select the initial sub-display to be displayed when the power is turned on, see page 84.

## **Simplest Setting**

### **Smart Tuning (Single Smart Tuning)**

Smart tuning sets optimum sensing conditions according to the operating conditions (response time and color/state of workpiece)

Button Operation	Display	Description of Operation	Explanation of Selection Menu
_	_	Set the reference workpiece in place, adjust the position of the Sensor Head while looking at the digital display values on the Amplifier Unit or the indicators on the Sensor Head so that the distance between the Sensor Head and the workpiece is the measurement center distance, and install the Sensor Head at this position.	
SMART MENU/SET  Hold down for 1 second	Pressing down SMARE SINGLE Pressed down EUNI NG Flashing	Press the button for one second. When SMRRL/ SI NGLE is displayed, release your finger from the button to start execution of smart tuning.	if "FRI LEG" flashes on the sub-display for three seconds, it indicates that tuning was not possible. IChange the response time setting to a larger value, and itry again.

#### Procedure for setting up height

## 1 Sensor installation/wiring Required

Has the Sensor been installed and wired? (See page 23.)

Set the reference workpiece in place, adjust the position of the Sensor Head while looking at the digital display values on the Amplifier Unit or the indicators on the Sensor Head so that the height to be measured is near the measurement center distance, and install the Sensor Head at this position.

2 Set to the MENU mode Required

Select the desired mode to set the measurement conditions in.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET  Hold down for 3 seconds	H L MENU	Hold down the button for three seconds to switch to the MENU mode.	
Press to display.	dELRI L 888888	Press the 🌢 button to display dEE위 L.	* This operation is not required when hold and trigger conditions are not to be set.
Press to display.	BEERL L ON	Press the <b>⇔</b> button to set the display to □N to set display of the detail menu.	

Height ZX2 User's Manual

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET		Press the button to apply the setting.	

Response time setting Required

Select the response time to match the size and moving speed of the sensing object.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display,	5PEEd 888888	Press the <b>\$</b> button to display $5PEEd$ .	Default value: 500 ms
Press to select	Select the desired value.	Press the button to select the response time.	Select the response time to match the size and moving speed of the sensing object.  The sensing object of the sensing object of the sensing object.  The sensing object of the sensing object.
SMART MENU/SET		Press the button to apply the setting.	* After the response time is changed, the smart tuning results are cleared, so be sure to re-execute tuning.

4 Smart tuning Required

Smart tuning sets optimum sensing conditions according to the operating conditions (response time and color/state of workpiece)

Button Operation	Display	Description of Operation	Explanation of Selection Menu
_	_	Check that the reference workpiece is set in place.	
SMART MEMUSET  Hold down for 1 second	Pressing down SMARL SINGLE Pressed down LUNI NG SINGLE Flashing	Press the button for one second. When SMRRL/ SINGLE is displayed, release your finger from the button to start execution of smart tuning.	If "FALLEA" flashes on the sub-display for three seconds, it indicates that tuning was not possible. Change the response time setting to a larger value, and try again.

To tune multiple workpieces or to tune workpieces having a different surface condition: page 80

#### Procedure for setting up steps and warpage

The Amplifier Units to set up differ depending on whether mutual interference prevention is set to ON or OFF.

Note that different channels are used to specify each menu item, as shown below.

## 1 Sensor installation/wiring Required

Has the Sensor been installed and wired? (See page 23.)

Connect two Amplifier Units with a Calculating Unit in between. (The calculation result is displayed and output on the CH2 Amplifier Unit.)

Set the reference workpiece in place, adjust the position of the Sensor Head while looking at the digital display values on the Amplifier Unit or the indicators on the Sensor Head so that each of the heights to be measured is near the measurement center distance, and install the Sensor Head at this position.

# 2 Set to the MENU mode Required

Select the desired mode to set the measurement conditions in.

(Use CH1 and CH2 for these settings.)

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET Hold down for 3 seconds	1 it	Hold down the button for three seconds to switch to the MENU mode.

#### Procedure for setting up double sheet detection

## 1 Sensor installation/wiring Required

Has the Sensor been installed and wired? (See page 23.)

Set the reference workpiece in place, adjust the position of the Sensor Head while looking at the digital display values on the Amplifier Unit or the indicators on the Sensor Head so that the measured value at measurement of one product and at measurement of two products is within the measurement range, and install the Sensor Head at this position.

2 Set to the MENU mode Required

Select the desired mode to set the measurement conditions in.

Button Operation	Display	Description of Operation	Explanation of Selection Menu

SETTING TRANSITION CHARTS Set this item to hold measured values during the measurement period according to preset hold conditions.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display.	HOLd 1888888	Press the ♦ button to display H□Ld.	Default value: OFF
Press to select	PERK Select the desired value.	Press the button to select the hold conditions.	Hold OFF The average measured value during the sampling period is held. The difference between the minimum and maximum values during the sampling period is held. The measured value at the start of the sampling period is held. The minimum value during the sampling period is held. The maximum value during the sampling period is held. The maximum value during the sampling period is held. The maximum value during the sampling period is held. (For details, see page 95.)
SMART MENU/SET		Press the button to apply the setting.  When other than FF is selected, proceed to 6 Trigger conditions, and when FF is selected, proceed to 7 Threshold setting.	* The clamp value is output until the first sampling period is finished. (For details on the clamp value, see page 111.)

6 Trigger conditions Optional

Set how timing of the hold measurement period is to be input.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display.	ERI G 88888	Press the ♦ button to display ERI [].	Default value: TIMING

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to select	Select the desired value.	Press the button to select the trigger conditions.	Enter the trigger by using the timing input or by pressing the button in the RUN mode. The period that the timing signal is ON is the sampling period.  The sampling period is the period that the measured value is lower than the specified self-trigger level.  The sampling period is the period that the measured value is greater than the specified self-trigger level. (For details, see page 97.)
SMART MENU/SET		Press the button to apply the trigger conditions.  When SELF-U and SELF-U are selected, proceed to the next item, and when U MI NU is selected, proceed to "7 Threshold setting."	
Press to display,	SELFLV BBBBBB	Press the button to display SELFLV.	Default value: 0.000
		Press the button to enable setting of the self-trigger level.	
[Change numeric value]	Set any value.	Press the 🐿 button to move the digit, press the 🕏 button to change the numeric value, and set the self-trigger level.	* If the button is pressed when the cursor is at the right-most digit or the button is pressed when the cursor is at the left-most digit, the setting will be canceled.
SMART MENU/SET		Press the button to apply the setting.

### **Thickness**

#### Procedure for setting up thickness

The Amplifier Units to set up differ for each menu. Note also that different channels are used to specify each menu item, as shown below.

### Sensor installation/wiring Required

Has the Sensor been installed and wired? (See page 23.)

Connect two Amplifier Units with a Calculating Unit in between. (The calculation result is displayed and output on the CH2 Amplifier Unit.)

Set up the two Sensor Heads so that they are facing each other, adjust the positions of the Sensor Heads while looking at the digital display values on the Amplifier Units or the indicators on the Sensor Heads so that the clearance between the sensing object and each Sensor Head is near the measurement center distance, and install the Sensor Heads at these positions.

Prepare a reference sensing object of known thickness.

# 2 Set to the MENU mode Required

Select the desired mode to set the measurement conditions in.

(Use CH1 and CH2 for these settings.)

	utton eration	Display		ay	Description of Operation	Explanation of Selection Menu

**Thickness** ZX2 User's Manual

#### **Important**

- If analog output is to be used, the entered thickness value is used as the center value of the analog output range. (For example, 0 V is used if the analog output is ±5 V.)
- After thickness calculation, the maximum and minimum measurement range values (CH2 measurement values) are assigned as the maximum and minimum analog output range.
- Concerning the minimum and maximum analog output values, the analog output minimum
  value is output for the smaller of the post-thickness calculation values, and the analog output
  maximum value is output for the larger of these values.

Example:If the ZX2-LD50 is used, a thickness value of 20 mm is entered, and analog output from –5 to 5 V is specified.

Measured Value After Thickness Calculation	How the Measurement Value Is Calculated	Analog Output
10.000	Thickness value – (CH2 measurement range/2) = 20.000 – 10.000	–5 V
20.000	Thickness value = 20.000	0 V
30.000	Thickness value + (CH2 measurement range/2) = 20.000 + 10.000	5 V

<sup>\*</sup> The measurement range for the ZX2-LD50 is ±10 mm.

#### Procedure for setting up positioning

### 1 Sensor installation/wiring Required

Has the Sensor been installed and wired? (See page 23.)

Set the sensing object in place, adjust the position of the Sensor Head while looking at the digital display values on the Amplifier Unit or the indicators on the Sensor Head so that the upper and lower limits of the distance between the Sensor Head and the sensing object is within the measurement range, and install the Sensor Head at this position.

## 2 Set to the MENU mode Required

Select the desired mode to set the measurement conditions in.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET Hold down for 3 seconds	Lit H L MENU	Hold down the button for three seconds to switch to the MENU mode.	
Press to display,	dELRI L 888888	Press the 🌢 button to display 러드노위 L.	* This operation is not required when scaling is not to be set.

Positioning ZX2 User's Manual

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display.	delai l On	Press the button to set the display to N to set display of the detail menu.	
SMART MENU/SET		Press the button to apply the setting.	

## Response time setting Required

Select the response time to match the size and moving speed of the sensing object.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display.	5PEEd 888888	Press the <b>b</b> button to display SPEEd.	Default value: 500 ms
Press to select	Select the desired value.	Press the state button to select the response time.	Select the response time to match the size and moving speed of the sensing object.  60 µs, 120 µs, 240 µs, 500 µs, 1 ms, 2 ms, 4 ms, 8 ms, 12 ms, 20 ms, 36 ms, 66 ms, 128 ms, 250 ms, 500 ms
SMART MENU/SET		Press the button to apply the setting.	* After the response time is changed, the smart tuning results are cleared, so be sure to re-execute tuning.

SETTING TRANSITION CHARTS

#### Procedure for setting up eccentricity and surface deflection

### 1 Sensor installation/wiring Required

Has the Sensor been installed and wired? (See page 23.)

Set the sensing object in place, adjust the position of the Sensor Head while looking at the digital display values on the Amplifier Unit or the indicators on the Sensor Head so that the clearance between the Sensor Head and the sensing object is near the measurement center distance, and install the Sensor Head at this position.

## 2 Set to the MENU mode Required

Select the desired mode to set the measurement conditions in.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET Hold down for 3 seconds	Lit H L MENU	Hold down the button for three seconds to switch to the MENU mode.	
Press to display,	dELRI L 888888	Press the ♦ button to display dEEAI L.	* This operation is not required when scaling, hold and trigger conditions are not to be set.
Press to display.	delai L On	Press the <b>ॐ</b> button to set the display to ☐N to set display of the detail menu.	

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET		Press the button to apply the setting.	

CONTENTS

## Response time setting Required

Select the response time to match the size and moving speed of the sensing object.

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display.	5PEEd 1888888	Press the button to display SPEEd.	Default value: 500 ms
Press to select	Select the desired value.	Press the button to select the response time.	Select the response time to match the size and moving speed of the sensing object.  To SOUND 100 µs, 240 µs, 500 µs, 1 ms, 2 ms, 4 ms, 8 ms, 12 ms, 20 ms, 36 ms, 66 ms, 128 ms, 250 ms, 500 ms
SMART MENU/SET		Press the button to apply the setting.	* After the response time is changed, the smart tuning results are cleared, so be sure to re-execute tuning.

# 4 Smart tuning Required

Smart tuning sets optimum sensing conditions according to the operating conditions (response time and color/state of workpiece)

Button Operation	Display	Description of Operation	Explanation of Selection Menu
_	_	Check that the reference workpiece is set in place.	
SMART MENUSET  Hold down for 1 second	Pressing down  SMARL  SI NULE  Pressed down  LUNI NULE  Flashing	Press the button for one second. When SMRRL/ SI NULE is displayed, release your finger from the button to start execution of smart tuning.	If "FALLEd" flashes on the loub-display for three seconds, it indicates that tuning was not possible. Ichange the response time setting to a larger value, and try again.

To tune multiple workpieces or to tune workpieces having a different surface condition: page 80

### Smart tuning:

This setting option sets optimum sensing conditions according to the operating conditions (response time and color/state of workpiece).

### Procedure for setting up smart tuning

#### **Important**

 When connecting two or more Amplifier Units and mutual interference prevention is set to ON, use the CH1 Amplifier Unit to execute tuning. After smart tuning execution for CH1 ends, it is also executed for the Amplifier Units of CH2 and later.

If the tuning result is NG for either Amplifier Unit, the smart tuning setup results are not applied to any amplifier units.

# 1 Set to the MENU mode Optional

Press to display.	5PEEd 1888888	Press the button to display SPEEd.	Default value: 500 ms

Smart Tuning ZX2 User's Manual

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to select	Select the desired value.	Press the \$\begin{align*}\$ button to select the response time.	Select the response time to match the size and moving speed of the sensing object.  60 µs, 120 µs, 240 µs, 500 µs, 1 ms, 2 ms, 4 ms, 8 ms, 12 ms, 20 ms, 36 ms, 66 ms, 128 ms, 250 ms, 500 ms
SMART MENU/SET		Press the button to apply the setting.	* After the response time is changed, the smart tuning results are cleared, so be sure to re-execute tuning.

3 Smart tuning Required

Select from one of the following three methods to execute smart tuning:

- (1) Tuning of a single stationary workpiece: Single smart tuning
- (2) Tuning of multiple stationary workpieces: Multi-smart tuning (a mix of workpieces having different color and state)
- (3) Tuning of workpieces having different surface states: Active smart tuning (execution of tuning while workpieces are moving)

### (1) Tuning of a single stationary workpiece: Single smart tuning

Button Operation	Display	Description of Operation	Explanation of Selection Menu
_	_	Set the reference workpiece in place.	
SMART MENUSET  Hold down for 1 second f	Pressing down  SMARL  SINGLE  Pressed down  LUNI NG  Flashing	Press the button for one second. When 5MRRL/ 51 N□LE is displayed, release your finger from the button to start execution of smart tuning.	Iff "FRILEd" flashes on theil sub-display for three seconds, it indicates that tuning was not possible. Change the response time setting to a larger value, and try again.

### Mutual interference prevention:

This refers to the function for preventing the influence of Sensor Heads when mounted close to each other. (This function can be used for up to five Amplifier Units connected by using Calculating Units (ZX2-CAL).)

Note: When the mutual interference prevention function is ON, external input cannot be used.

### Procedure for setting up mutual interference prevention

### Set to the MENU mode

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET  Hold down for 3 seconds	H L MENU	Hold down the button of the CH1 Amplifier Unit for three seconds to switch to the MENU mode.	
Press to display,	dELRI L 888888	Press the ♦ button to display dEEAI L.	* This step is not required if detail menu display is already set to ON in the MENU mode.
Press to display.	delri L On	Press the button to set the display to N to set display of the detail menu.	
SMART MENU/SET		Press the button to apply the setting.	

### 2 Mutual interference prevention setting

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Press to display.	54NC 188888	Press the ♦ button to display 5∃NC.	Default value: OFF
Press to display.	<u>SYNC</u> ON	Press the <b>ॐ</b> button to display ☐N.	
SMART MENU/SET		Press the button to apply the setting.	

### 3 Return to RUN mode

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET  Hold down for 3 seconds	Out H L MENU	Hold down the button for three seconds to switch to the RUN mode.	

### **Important**

 When CH1 is used to specify a setting while mutual interference prevention is set to ON, the menus for which the same setting is applied to the Amplifier Units of CH2 and later are shown in the following table.

Specify settings for the menus in the following table after setting mutual interference prevention to ON.

Menu	Displayable and Specifiable CH Number	Notes
Response time setting SPEEd		The setting of CH1 is also applied to Amplifier Units of CH2 and later.
Smart tuning		Smart tuning for the Amplifier Units of CH2 and later are executed together with CH1.

 When connecting two or more Amplifier Units, the response times (maximum values) are as follows:

Mutual Interference Prevention	Two-Sensor Operation	Total Response Time
	OFF	Response time setting for each CH
OFF	(A – B), THICK	(Total response time setting for each CH) + (4 ms × number of connected units)
ON	OFF (A – B), THICK	(Response time per unit in the table below) × number of connected units

### Zero Reset

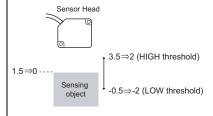

Setting channels used when i connecting multiple units: Each CH i

#### Zero reset:

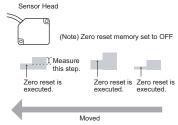

This refers to setting the reference value to "0" or any desired numeric value so that the measured value can be displayed and output as a positive or negative deviation (tolerance) from the reference value. The measured value can be set to "0" or any desired numeric value at any timing in the RUN mode.

Examples:

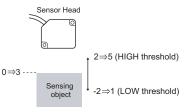

■ To eliminate reference deviation

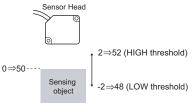

To measure steps in a sensing object reset at each measurement)

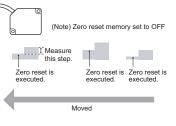

To display the height of a workpiece

■ To display the actual measuring distance value

by a single sensor (Executing a zero

CONTENTS

INTRODUCTION

Important

· If zero reset memory is set to ON, the zero reset level will be written in the Amplifier Unit's non-volatile memory (EEPROM) each time a zero reset is executed.

The EEPROM can be written a maximum of 100,000 times. Writing the zero reset level for each measurement can, therefore, use up the life of the memory and lead to malfunctions.

### 5 Zero reset execution

Button Operation	Display	Description of Operation	Explanation of Selection Menu
_	_	Set the sensing object to be used for executing the zero reset.	
Hold both down for 1 second	Lit LID ON ZERO ENABLE	Either press the button for one second in the RUN mode, or input the zero reset signal (4 ms to 1 s) from an external device.	(For details on external inputs, see page 118.)

### Important

- The minimum display value is -99.999, and the maximum display value is 999.999. If the
  measured value is below the minimum value after execution of zero reset, -99.999 will be
  displayed. 999.999 will be displayed if the measured value is above the maximum value.
   Zero reset can be executed only if the measured value is within ±10% of the rated
  measurement range.
- Even if a zero reset is executed, the threshold does not change from the setting before
  execution of the zero reset.
   (For example, even if a zero reset is executed so that the measured value 2 becomes 0, the
  HIGH threshold stays at 5 if it is 5 before zero reset is executed.)
- After a zero reset, analog values are output in a range that corresponds to the zero-reset display value (initial value: 0 mm), which accords with the zero-reset distance point. (When the zero-reset display is 0 mm and scaling is set to OFF, the analog output value will be 3 V if the range is 1 to 5 V, 0 V if the range is –5 to 5 V, and 12 mA if the range is 4 to 20 mA.)

### Procedure for canceling a zero reset

Button Operation	Display	Description of Operation	Explanation of Selection Menu
Hold both down for 1 second  Hold both down for 1 second	50,000  88888	Either press the status button for one second in the RUN mode, or input the zero reset signal (3 s or more) from an external device.

#### **Important**

Analog output when specifying the scaling setting

The analog output range is assigned based on the post-scaling display value setting range (between S1-AFT and S2-AFT).

Concerning the minimum and maximum analog output values, the analog output minimum value is output for the smaller of the post-scaling display values (S1-AFT/S2-AFT), and the analog output maximum value is output for the larger of these values.

Example: To set the analog output in the range of -5 V to 5 V and display a value from 45 mm to 55 mm when using the ZX2-LD50(L) at a distance of 45 mm to 55 mm from the sensor.

- (1) Select -5 . 5 as the analog output setting.
- (2) Specify the AFT value, and then assign the display value based on the measured value. Assign the analog output range based on the display value range.

S1-BEF: -5 (mm)

S1-AFT: 55 (mm)

S2-BEF: 5 (mm)

S2-AFT: 45 (mm)

<Initial setting>

Display value

-10 mm

10 mm

<Scaling setting>

•	Scaling point	Pre-scaling display value (BEF)	Post-scaling display value (AFT)	Analog output
	S1	–5 mm	55 mm	5 V
	S2	5 mm	45 mm	–5 V

· Threshold value when specifying the scaling setting

Analog output

-5 V

5 V

Even if scaling is executed, the threshold does not change from the setting before execution of scaling. (For example, the HIGH threshold stays at 5 if it was 5 before scaling is executed.)

Press to display,	8-0UL 888888	Press the <b>◊</b> button to display R-DUE.	Default value: -5 to +5 V
Press to select	Select the desired value.	Press the state button to select analog output.	Current output 4 to 20 mA  Voltage output 1 to 5 V  -5 . 5// Voltage output 5 to +5 V
SMART MENU/SET		Press the button to apply the setting.	

ZX2 User's Manual Analog Output

## 3 Return to RUN mode

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET Hold down for 3 seconds	Out H L MENU	Hold down the button for three seconds to switch to the RUN mode.	

Freely specifying the relationship between display values and analog output values (equivalent to the former ZX-L-N monitor focus)

 To specify any analog output value for a display value, assign the analog output range and the minimum and maximum analog output values by selecting the analog output and then setting up scaling.

(If scaling is not set up, the measurement range is the same as the analog output range.)

The analog output range is assigned based on the post-scaling display value setting range (between S1-AFT and S2-AFT).

Concerning the minimum and maximum analog output values, the analog output minimum value is output for the smaller of the post-scaling display values (S1-AFT/S2-AFT), and the analog output maximum value is output for the larger of these values.

-5 mm

5 mm

To only specify the analog output range, without changing display values

Example: To set the analog output in the range of –5 V to 5 V when using the ZX2-LD50(L) at a distance of 45 mm to 55 mm from the sensor:

- (1) Select -5 . 5 as the analog output setting.
- (2) Specify the measurement range to use for the BEF and AFT values, and then assign the analog output range based on the measured value range.

- S1-AFT: –5 (mm)  $\rightarrow$  Set the same value as S1-BEF
- S2-BEF: 5 (mm)
- S2-AFT: 5 (mm)  $\rightarrow$  Set the same value as S2-BEF

<Initial setting>

<Scaling setting>

· ·			J	· ·		
Display value	Analog output	<b>-</b>	Scaling point	Pre-scaling display value (BEF)	Post-scaling display value (AFT)	Analog output
–10 mm	–5 V		S1	–5 mm	–5 mm	–5 V
10 mm	5 V		S2	5 mm	5 mm	5 V

 To specify the analog output range after changing display values (For details on scaling, see page 108.)

# Output for Non-measurement | Setting channels used when connecting multiple units: Each CH I

#### Output for non-measurement:

This refers to specifying the output contents when an error occurs (Error-dark or Error-bright), when a reset is being input, or before measured values are finalized. (For details on these errors, see page 130.)

Selection Menu	Output Contents			
Selection Menu	Judgment Output	Analog Output		
KEEP (Default)	The measurement value immediately before the non-measurement state is entered is held and output.			
CLAMP	All OFF	The specified CLAMP value is output. The following options are available.  • For voltage output: -5.00 to 5.00 V (in 1-V steps), or the maximum (approximately 5.5 V)  • For current output: 4.00 to 20.00 mA (in 1-mA steps), or the maximum (approximately 22 mA)		

### Procedure for setting up output for non-measurement

### Set to the MENU mode

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET Hold down for 3 seconds	H L MENU	Hold down the button for three seconds to switch to the MENU mode.	
Press to display:	dELRI L 888888	Press the 🌢 button to display dEE위 L.	* This step is not required if detail menu display is already set to ON in the MENU mode.
Press to display.	BEERL L ON	Press the ♣ button to set the display to ☐N to set display of the detail menu.	
SMART MENU/SET		Press the button to apply the setting.

### 3 Return to RUN mode

Button Operation	Display	Description of Operation	Explanation of Selection Menu
SMART MENU/SET  Hold down for 3 seconds	Out L MENU	Hold down the button for three seconds to switch to the RUN mode.	

#### Procedure for executing external input

Each of the functions is executed when signals are input using the external input wire in table 1 below.

Timing input, reset input and bank switching are executed by a signal input of 4 ms or more. While the signal in table 2 below is being input, measurement is performed based on the settings of the specified bank.

When connecting two or more Amplifier Units, use the CH1 Amplifier Unit for bank switching. The banks of the Amplifier Units of CH2 and later are switched together with CH1.

Table 1 External Input Wiring

Question	Answer
What is the positional variation range with respect to the machine axis of the emitter beam spot?	The range is ±0.5° of the ideal emitter axis in the dimensional drawing on page 138.
After the response time is changed, is it necessary to re-execute smart tuning?	Yes. After the response time is changed, the smart tuning results are cleared. Therefore, re-execute tuning.
If using a different bank for the first time, is it necessary to execute smart tuning?	Yes. The smart tuning results are not applied to other banks. If using a different bank for the first time, execute smart tuning.
For the line beam type, is it possible to detect beam-spot-internal steps?	Spot-internal steps cannot be measured. Use the line beam spot so that it is at only one height.
Is it possible to add additional extension cables between the Sensor Head and Amplifier Unit?	Regardless of the length, only one extension cable can be added. It is not possible to add multiple extension cables.
About how much signal input and open time is required for each input operation?	These times can be checked using the timing charts in this manual (on page 144).
Can calculations be performed when Sensor Heads that have different measurement ranges are connected to two Amplifier Units?	Yes. This is possible without specifying any special settings.
How can I prevent an incorrect value being measured and output due to the shape of the workpiece?	If the incorrect measurement is caused by multireflection due to the shape of the workpiece, setting the detection surface selection to MAX might improve the measurement accuracy. (See page 120.)
Does the sensor need to be warmed up after canceling LD-OFF input?	Yes. The sensor must be warmed up for at least 10 minutes in the same way as when turning on the power.
Can the sensor head of a diffuse-reflective model be tilted like that of a regular-reflective model?	Yes it can, but because the sensor is tilted, the actual measurement distance between the sensor and the workpiece will differ from the distance displayed.  In this case, use a regular-reflective model whose linearity has been optimized by using regular-reflective optics.

\* Min. length when connected: 50

Model Item	ZX2-LDA11	ZX2-LDA41		
Measurement period (*1)	Min. 30 μs			
Response time	$60~\mu s,120~\mu s,240~\mu s,500~\mu s,1~m s,2~m s,4~m s,8~m s,12~m s,20~m s,36~m s,66~m s,128~m s,250~m s,500~m s$			
Analog output (*3)	4 to 20 mA, Max. load resistance: 300 $\Omega$ , ±5 Output impedance: 100 $\Omega$	5 VDC or 1 to 5 VDC,		
Judgment outputs (HIGH/PASS/ LOW: 3 outputs), error output	NPN open-collector outputs, 30 VDC, 50 mA max.  residual voltage: 1 V max. for load current 10 mA max., 2 V max. for load current above 10 mA	PNP open-collector outputs, 30 VDC, 50 mA max.  residual voltage: 1 V max. for load current 10 mA max., 2 V max. for load current above 10 mA		
Laser OFF input, zero reset input, timing input, reset input, bank input (*2)	ON: Short-circuited with 0-V terminal or 1.2 V or less.  OFF: Open (leakage current: 0.1 mA max.)	ON: Supply voltage short-circuited or supply voltage within –1.2 V OFF: Open (leakage current: 0.1 mA max.)		
Functions	Smart tuning, scaling, sample hold, peak hold, bottom hold, peak-to-peak hold, self-peak hold, self-bottom hold, average hold, zero reset, On-delay timer, OFF-delay timer, keep/clamp switch, (A-B) calculations (*4), thickness calculation (*4), mutual interference prevention (*2)(*4), laser deterioration detection, bank function (4 banks), differential function			
Indications	Judgement indicators: HIGH (orange), PASS (green), LOW (orange),11-segment main display (red), 11-segment sub-display (orange), laser ON (green), zero reset (green), ENABLE (green), MENU (green), HIGH threshold (orange), LOW threshold (orange)			
Power supply voltage	10 to 30 VDC, including 10% ripple(p-p)			
Power consumption	3,000 mW max. (at 24 VDC: 125 mA max., at 12 VDC: 250 mA max.)			
Ambient temperature	Operating: 0 to +50°C, Storage: -15 to +70°C (with no icing or condensation)			
Ambient humidity	Operating and storage: 35% to 85% (with no	o condensation)		
Dielectric strength	1,000 VAC, 50/60 Hz for 1 minute			
Vibration resistance (destruction)	10 to 150 Hz, 0.7-mm double amplitude, 80 minutes each in X, Y, and Z directions			
Shock resistance (destruction)	300 m/s² 3 times each in six directions (up/down, left/right, forward/backward)			
Degree of protection	IEC60529, IP40			
Connection method	Prewired (standard cable length: 2 m)			
Weight (packed state)	Approx. 200 g (main unit only: approx. 135 g)			
Materials	Case: PBT (polybutylene terephthalate), Cover: Polycarbonate, Display: Acrylic resin, Buttons: Polyacetal, Cable: PVC			
Accessories	Instruction sheet			

- (\*1) In the case of a white ceramic OMRON standard object
- (\*2) External input and the mutual interference prevention function cannot be used at the same time.
- (\*3) In the MENU mode, select and set current output (4 to 20 mA) and voltage output (±5 V or 1 to 5 V).
- (\*4) A Calculating Unit (ZX2-CAL) is required.

  Mutual interference prevention is possible for up to five Amplifier Units, and calculations are possible for up to two.

Ambient temperature	Operating: 0 to +50°C, Storage: -15 to +70°C (with no icing or condensation)				
Ambient humidity	Operating and storage: 35% to 85% (with no condensation)				
Dielectric strength	1,000 VAC, 50/60 Hz for 1 minute				
Vibration resistance (destruction)	10 to 150 Hz, 0.7-mm double amplitude, 80 minutes each in X, Y, and Z directions				
Shock resistance (destruction)	300 m/s² 3 times each in six directions (up/down, left/right, forward/backward)				
Degree of protection	IEC60529, IP67				
Connection method	Connector connection (standard cable length: 500 mm)				
Weight (packed state)	Approx. 160 g (main u	nit only: approx. 75 g)			
Materials	Case and cover: Polybutylene terephthalate, Optical window: Glass, Screw sections: Brass, Cable: PVC				
Accessories	Instruction sheet, ferrite core x 1 (made by TDK Corp. ZCAT1730-0730A), laser warning label (English), FDA certification label				

(Note) Highly reflective objects can result in incorrect detection by causing out-of-range measurements.

(\*1) Beam size: The beam size is defined by 1/e² (13.5%) of the strength of the beam at the beam center (measured value). Incorrect detection may occur if there is light leakage outside the defined spot and the material around the sensing object is more reflective than the sensing object.

(\*2) Resolution: The resolution is the deviation (±3σ) in the analog output when connected to the ZX2-LDA Amplifier Unit. (The resolution is measured with the standard reference object (white ceramic), at the measurement point when the response time of the ZX2-LDA is set to 128 ms.) The resolution is given at the repeat accuracy for a stationary workpiece, and is not an indication of the distance accuracy. The resolution may be adversely affected under strong electromagnetic fields.

(\*3) Linearity: The linearity is given as the error in an ideal straight line displacement output when measuring the standard reference object. The linearity and measurement values vary with the object being measured. F.S. is the entire measurement range. (ZX2-LD50□:20mm)

(\*4) Temperature characteristic: The temperature characteristic is measured at the measurement center distance with the Sensor and reference object (OMRON's standard reference object) secured with an aluminum jig.

(\*5) Categorized as Class 1 by IEC60825-1:2014 criteria in accordance with the stipulations of the FDA standard Laser Notice No. 56. and registered with CDRH (Center for Devices and Radiological Health) (accession number: 1020665)

# **Timing Charts**

CONTENTS

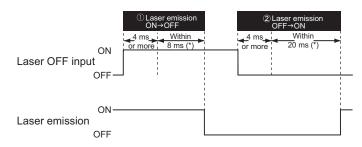

INTRODUCTION

PREPARATION

MEASUREMENT

This section explains the timing charts for the I/O signals that are exchanged between the Controller and external devices.

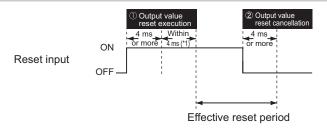

### **Laser OFF input**

1	If laser OFF input is ON for 4 ms or more, the signal is received, and laser emission is turned OFF within 8 ms.
2	If laser OFF input is OFF for 4 ms or more, the signal is received, and laser emission is turned ON within 20 ms.

(\*) The value is within 150 ms when mutual interference prevention is set to ON.

### Reset input

1		If reset input is ON for 4 ms or more, the signal is received, and output is reset within 4 ms.
2	Output value reset cancellation	If reset input is OFF for 4 ms or more, measurement is resumed. Acquire the measurement results after the preset response time elapses. (*2)

- (\*1) The value is within 150 ms when mutual interference prevention is set to ON.
- (\*2) When connecting two or more Amplifier Units, acquire the measurement results after the response time specified for connecting two or more units elapses. (See page 86.)

Note. • When the hold function is not used

- The output while a reset signal is being input is held in accordance with the output during non-measurement setting.
- When the hold function is used
  If a reset signal is input, the state in effect before the hold function was set will be restored.
  (For details on the hold function, see page 93, and for details on the output during non-measurement, see page 111.)

### Bank input

· When only one Amplifier Unit is used

Example: Switching from bank 2 to bank 1

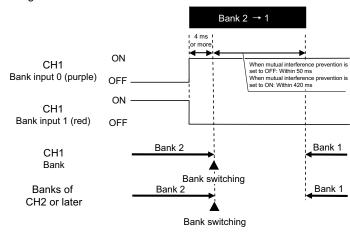

(\*) Bank input is executed by the ON/OFF combinations of BANK input 0 and BANK input 1.

If a bank input signal is input for 4 ms or more, the bank is determined, the bank is switched within 20 ms. and then measurement is resumed.

Acquire the measurement results after the preset response time elapses.

· When connecting two or more Amplifier Units

Example: Switching from bank 2 to bank 1

(\*) Bank input is executed by the ON/OFF combinations of CH1 BANK input 0 and CH1 BANK input 1 when connecting two or more Amplifier Units.

If a CH1 bank input signal is input for 4 ms or more, the bank is determined, the bank is switched within 50 ms if mutual interference prevention is set to OFF, and within 420 ms if mutual interference prevention is set to ON, and then measurement is resumed.

Acquire the measurement results after the response time specified for connecting two or more Amplifier Units elapses. (See page 86.)

### Zero reset input

· When the zero reset memory setting is OFF

1	Zero reset execution	Turn OFF after 4 ms to 1 s zero reset input turns ON. The zero reset is executed, and measurement is resumed within 5 ms. Acquire the measurement results after the preset response time elapses. (*)
2	Zero reset cancellation	Turn OFF after zero reset input turns ON for 3 s or more. The zero reset is canceled, and measurement is resumed within 5 ms. Acquire the measurement results after the preset response time elapses. (*)

· When the zero reset memory setting is ON

1	Zero reset execution	Turn OFF after 4 ms to 1 s zero reset input turns ON. The zero reset is executed, and measurement is resumed within 400 ms. Acquire the measurement results after the preset response time elapses. (*)
2	Zero reset cancellation	Turn OFF after zero reset input turns ON for 3 s or more. The zero reset is canceled, and measurement is resumed within 400 ms. Acquire the measurement results after the preset response time elapses. (*)

(\*) When connecting two or more Amplifier Units, acquire the measurement results after the response time specified for connecting two or more units elapses.(See page 86.)

SETTING TRANSITION CHARTS

#### Horizontal direction

### Vertical direction

Results: For all models, the distance that causes malfunction is 0 mm in all the X, Y, and Z directions.

Note. The above result was obtained when the white ceramic workpiece was positioned facing the sensor, not on an angle.

Note that mutual interference can occur when using different types of workpieces or when the sensors are attached at an angle, so it is recommended to use the sensors with mutual interference prevention turned on.

# **Revision History**

A manual revision code appears as a suffix to the catalog number at the bottom of the front and back covers of this manual.

Revision code	Date	Revised contents
01	Oct. 2010	Original production
02	Jan. 2011	General revision (calculating unit launched)
03	Apr. 2011	General revision (differential function and detection surface selection function added)
04	Jul. 2011	Revision (regular-reflective model launched)
05	Dec. 2011	Minor corrections
06	Nov. 2013	Pages 5 to 7: Updated terms and conditions agreement. Page 10: Changed information on FDA standards. Page 137: Changed specification of power consumption. Page 138: Changed L and A values for ZX2-LD100 (L). Page 139: Changed information on FDA standards. Page 140: Changed information on FDA standards and changed specification of accessories. Page 141: Revised dimensions of E39-L178/L179 Mounting Brackets. Page 147: Changed "Typical" to "Reference Value."
07	Mar. 2015	Pages 26 and 86: Corrected channel designations for formula in figure. Page 50: Added sentence at top right of page. Page 136: Added callouts to figure. Page 138: Changed figure at bottom of page. Pages 139 and 140: Added material for screw sections.
08	July 2015	Page 11: Added applicable standards. Corrected mistakes.
09	November 2018	Page 6: Updated terms and conditions agreement. Page 90, 119 and 137: Added notes on mutual interference prevention.
10	August 2021	Minor corrections
11	September 2024	Laser class change
